The high quality and high efficiency of Mule-Dev-201 study guide make it stand out in the products of the same industry. Our study materials have always been considered for the users. If you choose our Mule-Dev-201 exam questions, you will become a better self. Mule-Dev-201 actual exam want to contribute to your brilliant future. Our study materials are constantly improving themselves. If you have any good ideas, our study materials are very happy to accept them. Mule-Dev-201 Exam Materials are looking forward to having more partners to join this family. We will progress together and become better ourselves.

Among all learning websites providing IT certification Mule-Dev-201 dumps and training methods, whose Mule-Dev-201 exam dumps and training materials are the most reliable? Of course, Mule-Dev-201 exam dumps and certification training questions on ExamPrepAway site are the most reliable. Our ExamPrepAway have professional team, certification experts, technician and comprehensive language master, who always research the Latest Mule-Dev-201 Exam Dumps and update Mule-Dev-201 certification training material, so you can be fully sure that our Mule-Dev-201 test training materials can help you pass the Mule-Dev-201 exam.

Useful Mule-Dev-201 Book Pdf - Easy and Guaranteed Mule-Dev-201 Exam Success

If you fail to get success in the Salesforce Mule-Dev-201 test, you can claim your money back according to some terms and conditions. If you want to practice offline, use our Salesforce Mule-Dev-201 desktop practice test software. Windows computers support this software. The Mule-Dev-201 web-based practice exam is compatible with all browsers and operating systems.

Salesforce Certified MuleSoft Developer Sample Questions (Q232-Q237):

NEW QUESTION # 232

What is the correct Syntax to add a customer ID as a URI parameter in the HTTP listener's path attribute?

- A. #[customerID]
- B. (customerID)
- C. \${customerID}
- D. {customerID}

Answer: D

Explanation:

URL parameters are always accessed using { } like => {customerID}

NEW QUESTION # 233

Following Mulesoft's recommended API-led connectivity approach, an organization has created an application network. The organization now needs to create API's to transform, orchestrate and aggregate the data provided by the other API's in the application network. This API should be flexible enough to handle the data from additional API's in future.

According to Mulesoft's recommended API-led connectivity approach, what is the best layer for this new API?

- A. Experience layer
- B. System layer
- C. Data layer
- D. Process layer

Answer: D

Explanation:

Correct answer is process layer as all the orchestration and transformation logic should be in process layer as per Mulesoft's recommended approach for API led connectivity.

API-led connectivity is a methodical way to connect data to applications through reusable and purposeful APIs. These APIs are developed to play a specific role - unlocking data from systems, composing data into processes, or delivering an experience.

What are the APIs that enable API-led connectivity?

API-led connectivity provides an approach for connecting and exposing assets. With this approach, rather than connecting things point-to-point, every asset becomes a managed API - a modern API, which makes it discoverable through self-service without losing control.

The APIs used in an API-led approach to connectivity fall into three categories:

System APIs - these usually access the core systems of record and provide a means of insulating the user from the complexity or any changes to the underlying systems. Once built, many users, can access data without any need to learn the underlying systems and can reuse these APIs in multiple projects.

Process APIs - These APIs interact with and shape data within a single system or across systems (breaking down data silos) and are created here without a dependence on the source systems from which that data originates, as well as the target channels through which that data is delivered.

Experience APIs - Experience APIs are the means by which data can be reconfigured so that it is most easily consumed by its intended audience, all from a common data source, rather than setting up separate point-to-point integrations for each channel. An Experience API is usually created with API-first design principles where the API is designed for the specific user experience in mind.

NEW QUESTION # 234

According to Semantic Versioning, which version would you change for incompatible API changes?

- A. No change
- **B. MAJOR**
- C. PATCH
- D. MINOR

Answer: B

Explanation:

Correct answer is MAJOR

MAJOR version when you make incompatible API changes, MINOR version when you add functionality in a backwards compatible manner, and PATCH version when you make backwards compatible bug fixes.

For details refer to this documentation : <https://semver.org/>

NEW QUESTION # 235

Refer to exhibits.

In the execution of the Scatter-Gather, the flow route completes after 10 seconds and the flow2 route completes in 40 seconds. How many seconds does it take for the Scatter-Gather to complete?

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

Scatter-Gather sends the event to each route concurrently. Hence both routes in this example will start in parallel. So total time to complete processing is 40 seconds. The Scatter-Gather component is a routing event processor that processes a Mule event through different parallel processing routes that contain different event processors. Each route receives a reference to the Mule event and executes a sequence of one or more event processors. Each of these routes uses a separate thread to execute the event processors, and the resulting Mule event can be either the same Mule event without modifications or a new Mule event with its own payload, attributes, and variables. The Scatter-Gather component then combines the Mule events returned by each processing route into a new Mule event that is passed to the next event processor only after every route completes successfully.

The Scatter-Gather component executes each route in parallel, not sequentially. Parallel execution of routes can greatly increase the efficiency of your Mule application and may provide more information than sequential processing.

Mule Ref Doc : <https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-concept>

NEW QUESTION # 236

What is the object type returned by the File List operation?

- A. Array of Mule event objects
- B. Object of Mule event objects
- C. Object of String filenames
- D. Array of String file names

Answer: A

Explanation:

The List operation returns an array of messages in which: Each message holds the file's content in its payload.

The file's attributes section carries the file's metadata (such as name, creation time, and size). The payload is empty if the element is a folder.

NEW QUESTION # 237

.....

It was never so easy to make your way to the world's most rewarding professional qualification as it has become now!

ExamPrepAway' Mule-Dev-201 practice test questions answers are the best option to secure your success in just one go. You can easily answer all exam questions by doing our Mule-Dev-201 exam dumps repeatedly. For further sharpening your skills, practice mock tests using our Mule-Dev-201 Brain Dumps Testing Engine software and overcome your fear of failing exam. Our Salesforce Certified MuleSoft Developer dumps are the most trustworthy, reliable and the best helpful study content that will prove the best alternative to your time and money.
