# DCA Excellect Pass Rate, DCA Valid Test Answers

P.S. Free & New DCA dumps are available on Google Drive shared by ExamcollectionPass: https://drive.google.com/open?id=1DXqpzXc0ULIzcGCGL34rkeE1BDA8kyR_

You may find that there are a lot of buttons on the website which are the links to the information that you want to know about our DCA exam braindumps. Also the useful small buttons can give you a lot of help on our DCA study guide. Some buttons are used for hide or display answers. What is more, there are extra place for you to make notes below every question of the DCA practice quiz. Don't you think it is quite amazing? Just come and have a try!

The DCA Certification program is open to anyone who is interested in becoming a certified Docker professional. The program is ideal for IT professionals, developers, and system administrators who want to enhance their Docker knowledge and skills. Docker Certified Associate (DCA) Exam certification exam measures a candidate's ability to perform tasks related to Docker installation, configuration, and management.

## DCA Valid Test Answers - DCA New Exam Bootcamp

If you are looking for the latest exam materials for the test DCA and want to take part in the exam within next three months, it is time for you to get a good DCA guide torrent file. ExamcollectionPass releases a good exam guide torrent recent days so that it will be available & useful for your exam. If you study hard with our DCA Guide Torrent file you will be able to pass exam certainly. Dozens of money spending on DCA guide torrent will help you save a lot of time and energy. Maybe you can avoid failure and pay extra

exam cost.

# Docker Certified Associate (DCA) Exam Sample Questions (Q13-Q18):

**NEW QUESTION # 13**
Does this command display all the pods in the cluster that are labeled as 'env: development'?
Solution: 'kubectl get pods --all-namespaces -label env=development'

- A. No
- B. Yes

**Answer: A**

Explanation:
= The command kubectl get pods --all-namespaces -label env=development is not valid because it has a syntax error. The correct syntax for listing pods with a specific label is kubectl get pods --all-namespaces --selector label=value or kubectl get pods --all-namespaces -l label=value. The error in the command is:
The option flag for specifying the label selector is --selector or -l, not -label. For example, -label env=development should be --selector env=development or -l env=development.
The correct command for listing all the pods in the cluster that are labeled as env: development is:
kubectl get pods --all-namespaces --selector env=development
This command will display the name, status, restarts, and age of the pods that have the label env: development in all namespaces.
Labels | Kube by Example : kubectl Cheat Sheet | Kubernetes

**NEW QUESTION # 14**
Does this command create a swarm service that only listens on port 53 using the UDP protocol?
Solution: 'docker service create --name dns-cache -p 53:53/udp dns-cache'

- A. Yes
- B. No

**Answer: A**

Explanation:
= The command 'docker service create --name dns-cache -p 53:53/udp dns-cache' creates a swarm service that only listens on port 53 using the UDP protocol. This is because the -p flag specifies the port mapping between the host and the service, and the /udp suffix indicates the protocol to use1. Port 53 is commonly used for DNS services, which use UDP as the default transport protocol2. The dns-cache argument is the name of the image to use for the service.
:
docker service create | Docker Documentation
DNS - Wikipedia
I hope this helps you understand the command and the protocol, and how they work with Docker and swarm. If you have any other questions related to Docker, please feel free to ask me.

**NEW QUESTION # 15**
Will this command list all nodes in a swarm cluster from the command line?
Solution: 'docker Is -a'

- A. Yes
- B. No

**Answer: A**

**NEW QUESTION # 16**
Which of the following are types of namespaces used by Docker to provide isolation? (Choose 2.)

- A. Network

- B. Storage
- C. Authentication
- D. Host
- E. Process ID

**Answer: A,E**

**NEW QUESTION # 17**

The Kubernetes yaml shown below describes a clusterIP service.

```yaml
apiVersion: v1
kind: Service
metadata:
  name: dca
spec:
  type: clusterIP
  selector:
    app: nginx
  ports:
  - port: 8080
    targetPort: 80
  - port: 4443
    targetPort: 443
```

Is this a correct statement about how this service routes requests?
Solution: Traffic sent to the IP of any pod with the label app: nginx on port 8080 will be forwarded to port 80 in that pod.

- A. No
- B. Yes

**Answer: A**

Explanation:
The statement is incorrect because it does not mention the service name or the clusterIP address. Traffic sent to the IP of any pod with the label app: nginx on port 8080 will not be forwarded to port 80 in that pod, unless the traffic is coming from another pod within the same cluster that knows the pod IP. To access the service from outside the cluster, the traffic must be sent to the clusterIP address of the service, which is assigned by Kubernetes, and the port 8080 of the service, which is defined in the yaml file. The service will then forward the traffic to one of the selected pods on port 80.
To summarize, the correct statement should be:
Traffic sent to the clusterIP address of the service dca on port 8080 will be forwarded to port 80 in one of the pods with the label app: nginx.
