These formats of our SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition C-S4CPB-2508 updated exam study material give you multiple training options so that you can meet your SAP C-S4CPB-2508 exam preparation objectives. Keep reading because we have discussed the specifications of ActualPDF C-S4CPB-2508 exam questions preparation material in three user-friendly formats.

**SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud**

## Public Edition Sample Questions (Q45-Q50):

### NEW QUESTION # 45

Where is the initial list of known integrations documented?

- A. In SAP Cloud ALM
- **B. In the Business Driven Configuration Questionnaire**
- C. In the Digital Discovery Assessment
- D. In the Fit-to-Standard Workshops

**Answer: B**

Explanation:

The initial list of known integrations is documented in the Business Driven Configuration Questionnaire (BDCQ). The BDCQ is a tool that helps you to capture the business requirements and scope of your SAP S/4HANA Cloud Public Edition project. It contains a series of questions that cover different aspects of your business processes, such as organizational structure, master data, configuration settings, and integration scenarios. The BDCQ also provides guidance on the best practices and recommendations for your project<sup>12</sup>.

One of the sections in the BDCQ is the Integration section, where you can document the initial list of known integrations that are relevant for your project. The Integration section contains questions about the integration scenarios that you want to enable, such as cross-system process integration, data replication, data migration, and third-party integration. The Integration section also provides information on the available integration options, such as SAP Cloud Platform Integration, SAP API Business Hub, and SAP Cloud ALM<sup>13</sup>.

The initial list of known integrations is important for your project, as it helps you to identify the integration requirements, dependencies, and risks that need to be considered in the project planning and execution. The initial list of known integrations also helps you to select the appropriate integration tools and methods, and to align the integration scope with the SAP S/4HANA Cloud Public Edition roadmap and release cycles<sup>13</sup>.

Therefore, the correct answer is A, as the initial list of known integrations is documented in the BDCQ. References = 1 Business Driven Configuration Questionnaire - SAP Help Portal 2 Business Driven Configuration Questionnaire - SAP Community 3 SAP S/4HANA Cloud Public Edition Integration - SAP Help Portal

### NEW QUESTION # 46

If a customer wants to develop their own custom application and integrate it with SAP S/4HANA Cloud Public Edition, what tools would you recommend to develop the app? Note: There are 2 correct answers to this question.

- A. SAP Cloud Portal Service
- **B. SAP Build**
- C. SAP HANA Cloud
- **D. SAP Business Application Studio**

**Answer: B,D**

### NEW QUESTION # 47

Which of the following are examples of indirect digital access? Note: There are 2 correct answers to this question.

- **A. A Time Sheet Record from a 3rd party application**
- **B. A Defect document created through an industry application**
- C. An unattended bot in SAP Build Process Automation
- D. A Production Order created through a non-SAP front-end

**Answer: A,B**

Explanation:

Indirect digital access occurs when humans, devices, or systems use the digital core indirectly through non-SAP intermediary software, such as a non-SAP front end, a custom-solution, or any other non-SAP application<sup>1</sup>. Indirect digital access is measured by the number of documents created, updated, or deleted in the SAP system as a result of the indirect use<sup>2</sup>. Examples of indirect digital access include:

\* A Defect document created through an industry application: This is an example of indirect digital access because the industry application is a non-SAP software that triggers the creation of a document in the SAP system.

- \* A Time Sheet Record from a 3rd party application: This is also an example of indirect digital access because the 3rd party application is a non-SAP software that triggers the creation of a document in the SAP system.
- \* An unattended bot in SAP Build Process Automation: This is not an example of indirect digital access because the bot is using SAP software to access the SAP system directly, not through a non-SAP intermediary software.
- \* A Production Order created through a non-SAP front-end: This is not an example of indirect digital access because the production order is not a document type that is counted for indirect digital access. The document types that are counted are: Sales Order, Invoice, Purchase Order, Service and Maintenance Document, Manufacturing Document, Quality Management Document, Time Sheet, Financial Document, and Material Document<sup>2</sup>. References = Digital Access | SAP Help Portal, SAP Digital Access / SAP Digital Access Adoption Program (DAAP) Extension through December 31, 2021

#### NEW QUESTION # 48

You have assigned a deployment target in SAP Central Business Configuration, but have not yet completed scoping. Which of the following tasks can you complete? Note: There are 2 correct answers to this question.

- A. Create a company code.
- B. Rename the deployment target.
- C. Define the group currency.
- D. Assign a different deployment target.

**Answer: B,D**

#### NEW QUESTION # 49

Which layer of SAP S/4HANA provides a universal language to read and process data across different applications?

- A. SAP HANA
- B. SAP Fiori
- C. Core Data Services
- D. SAP Business Suite

**Answer: C**

Explanation:

Core Data Services (CDS) is a layer of SAP S/4HANA that provides a universal language to read and process data across different applications. CDS is based on SQL and extends it with domain-specific features and annotations. CDS views are reusable and can be consumed by various interfaces such as SAP Fiori, OData, or SQL. CDS views also enable the definition of semantic data models that expose the business logic and meaning of the underlying data sources.
