Latest Ind-Dev-201 Cram Materials - Test Ind-Dev-201 Topics Pdf

Our Ind-Dev-201 practice test software contains multiple learning tools that will help you pass the Salesforce Certified Industries CPQ Developer in the first attempt. We provide actual Ind-Dev-201 questions pdf dumps also for quick practice. Our Ind-Dev-201 vce products are easy to use, and you can simply turn things around by going through all the Salesforce Certified Industries CPQ Developer exam material to ensure your success in the exam. Our Ind-Dev-201 Pdf Dumps will help you prepare for the

Salesforce Certified Industries CPQ Developer even when you are at work.

Salesforce Certified Industries CPQ Developer Sample Questions (Q193-Q198):

NEW QUESTION # 193

Which three ways can a developer filter the list of products when using the getCartProducts method?

Choose 3 answers

Using a value that is contained within a product attribute

- A. Using a product category
- B. Using a value that will be matched exactly to a value in a Product field
- C. Using a context rule that qualifies a set of products
- D. Using a value that is contained within a Product2 field

Answer: A,B,D

Explanation:

When using the getCartProducts method in Salesforce Industries CPQ to filter the list of products, developers have multiple criteria they can apply: A. Using a value that is contained within a Product2 field:

This allows filtering based on specific Salesforce fields within the Product2 object, such as name, SKU, or custom fields that store product attributes. B. Using a value that will be matched exactly to a value in a Product field: Enables precise filtering based on exact matches in product fields, ensuring that only products that meet the exact criteria are included. D. Using a product category: This method allows for filtering based on the category assigned to products, making it easier to group and display products that fall into specific, predefined categories, such as electronics, apparel, etc.

These filters help in efficiently narrowing down product lists based on specific attributes or classifications, enhancing the user experience by displaying relevant products to the customers.

NEW QUESTION # 194

A developer wants to add product images to a guided selling experience.

What must the developer pass to the getCartProducts method to enable this?

- A. Create a subaction to invoke getProductImages
- B. Set the Render property to true
- C. Set the includeAttachment parameter to true
- D. Set the SearchBy parameter to Product2.Images

Answer: C

Explanation:

When a developer wants to add product images to a guided selling experience in Salesforce Industries CPQ, they must set the "includeAttachment" parameter to true in the API method getCartProducts. This parameter ensures that the method fetches associated attachments, including images, along with the product data. By enabling this parameter, product images are included in the API response, which can then be utilized within the guided selling interface to enhance the visual appeal and informativeness of product selections.

NEW QUESTION # 195

In Guided Selling, in order to ensure that your script will be portable from your dev org to your production org, you should specify the price list by:

Note: This question displayed answer options in random order when taking this Test.

- A. Create a key/value pair with SObject being the key and %pricelistId% being the value.
- B. Using a DataRaptor to retrieve the price list Id.
- C. Include a key/value pair in the remote action containing the remote method createCart.
- D. Include the price list Id in the vlcCart settings.

Answer: D

Explanation:

This question is identical to Question No: 134, and the answer remains the same. Including the price list ID in the vlcCart settings is crucial for ensuring the portability of the Guided Selling script across different Salesforce orgs. By centralizing this configuration, the script can adapt to different environments without requiring changes to the core code, facilitating smoother deployments and upgrades.

NEW QUESTION # 196

A developer has updated the price of a product but still sees the previous price in the Digital Commerce API response. What job should the developer run to correct this issue?

- A. Populate API Cache job
- B. Migrate Cache Records job
- **C. Regenerate Cached API Records job**
- D. Delete Expired API Cache job

Answer: C

Explanation:

- * Purpose of the Job: The Regenerate Cached API Records job rebuilds the cached records stored in the SBQQ__APICache__c object. This ensures that the latest data (e.g., updated prices, configurations, or rules) is reflected in API responses.
- * It forces Salesforce CPQ to re-evaluate and re-cache all records based on the current configuration and pricing data.
- * This job is explicitly designed to address scenarios where changes are not visible in API responses due to stale cache.
- * When to Use It:
 - * After updating product prices, discount schedules, configuration rules, or attribute changes.
 - * When troubleshooting discrepancies between Salesforce CPQ data and API responses.
- * How It Works:
 - * The job iterates through all relevant records (products, quotes, etc.) and regenerates their cached representations.
 - * This process updates the SBQQ__APICache__c table with fresh data, ensuring the Digital Commerce API returns accurate results.

https://help.salesforce.com/s/articleView?id=ind.comms_regenerate_cached_api_records.htm&type=5 When updates to product prices or configurations are made in Salesforce CPQ, the changes may not immediately reflect in the Digital Commerce API response due to cached data. The Regenerate Cached API Records job forces the system to rebuild the cached records with the latest data, ensuring the API returns updated values. Other jobs like "Populate API Cache" (initial population) or "Delete Expired API Cache" (cleanup) do not refresh existing cached records with new data. Why Regenerate Cached API Records (Option D) is Correct:

- * A. Populate API Cache Job:
 - * This job initializes the cache for the first time (e.g., during CPQ setup).
 - * It does not update existing cached records after changes are made.
- * B. Migrate Cache Records Job:
 - * This job transfers cached records between Salesforce orgs (e.g., during sandbox-to-production migrations).
 - * It is unrelated to refreshing data within the same org.
- * C. Delete Expired API Cache Job:
 - * This job removes old cached records that are no longer valid (e.g., expired quotes).
 - * It does not regenerate or update active cached records with new data.

Why Other Options Are Incorrect:

- * Salesforce CPQ Administration Guide:
 - * Explains the role of caching in CPQ and states: "The Regenerate Cached API Records job updates the cached data used by the Digital Commerce API. Run this job after making changes to products, prices, or rules to ensure the API reflects the latest configurations." (Source: Salesforce Help - Manage Cached Data for APIs)
 - * Explains the role of caching in CPQ and states: "The Regenerate Cached API Records job updates the cached data used by the Digital Commerce API. Run this job after making changes to products, prices, or rules to ensure the API reflects the latest configurations." (Source: Salesforce Help - Manage Cached Data for APIs)

* API Cache Object (SBQQ__APICache__c):

- * The SBQQ__APICache__c object stores precomputed JSON representations of CPQ data for API efficiency.
- * Regenerating this object ensures that API responses align with the latest data model. (Source: Salesforce CPQ Developer Guide - APICache Object)

* Troubleshooting Stale Data:

- * Salesforce recommends running the Regenerate Cached API Records job as a first step when API responses do not match CPQ configurations. (Source: Salesforce Knowledge Article - Troubleshoot CPQ API Cache Issues)

Key References from Salesforce CPQ Documentation:

- * Navigate to Setup # CPQ Settings # API Cache Jobs.
 - * Select Regenerate Cached API Records.
 - * Specify filters (e.g., products, quotes) or run it for all records.
 - * Monitor progress in the Jobs tab.
- Steps to Run the Job:

NEW QUESTION # 197

In Vlocity Context Rules, only one rule set can apply to a promotion.

- A. False
- B. True

Answer: A

Explanation:

In Vlocity Context Rules, it is possible for multiple rule sets to apply to a single promotion. This flexibility allows for more granular and specific targeting of promotions based on different criteria set within each rule set. By designing the system this way, Vlocity allows administrators to create complex promotional structures that can adapt to various customer scenarios, thereby enhancing the effectiveness of promotional campaigns within the Vlocity CPQ environment.

NEW QUESTION # 198

.....

It can be said that all the content of the Ind-Dev-201 study materials are from the experts in the field of masterpieces, and these are understandable and easy to remember, so users do not have to spend a lot of time to remember and learn. It takes only a little practice on a daily basis to get the desired results. Especially in the face of some difficult problems, the user does not need to worry too much, just learn the Ind-Dev-201 Study Materials provide questions and answers, you can simply pass the exam. This is a wise choice, and in the near future, after using our Ind-Dev-201 training materials, you will realize your dream of a promotion and a raise, because your pay is worth the rewards.
