In the same way, VCE4Plus update its Selling SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite (C_ACDET_2506) exam questions bank in the PDF version so users get the latest material for C_ACDET_2506 exam preparation.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite

Sample Questions (Q22-Q27):

NEW QUESTION # 22

If you add a custom field to the ContractWorkspace class, which other class(es) will that field be added to?

- A. ContractRequest
- B. AbstractContractWorkspace
- C. InternalContractWorkspace and SalesContractWorkspace
- D. SalesContractRequest and InternalContractRequest

Answer: C

Explanation:

TheContractWorkspace class is a parent class to both InternalContractWorkspace and SalesContractWorkspaceclasses in SAP Ariba. When a custom field is added to ContractWorkspace, it automatically inherits down to both these subclasses, making the field available in both internal and sales contract workspace types. It does not propagate upward to AbstractContractWorkspace or into contract request classes. This inheritance model is part of SAP Ariba's class hierarchy to ensure consistent data structures across related contract objects.

NEW QUESTION # 23

You can choose multiple field configurations and migrate them to the production site by creating a package in your test site. Which of the following steps should be included? (Select 3 correct answers)

- A. Publish the form template within the test site in order to add the form fields in the package.
- B. If you are migrating fields that are associated with enumerations, you should load those enumerations in the production site before migrating the fields.
- C. The Flex Master Data (FMD) templates must be defined and their data should be loaded in the production site before migrating FMD custom fields.
- D. Discard any other packages that appear in My Action Items.
- E. Make sure you update the string resource files in the production site before migrating the corresponding configurations from test to production site.

Answer: B,C,E

Explanation:

When migrating field configurations in SAP Ariba, it's essential to prepare all dependent components to avoid migration errors.

* Enumerations (B): These must be imported into Production before migrating fields that reference them, since the fields depend on the enumerated values to validate configurations.

* String Resource Files (C): These contain translations and label customizations. They should be uploaded and updated in Production first to ensure that migrated fields have the proper localized text.

* Flex Master Data (E): Since fields referencing FMD templates rely on these data structures, the templates and their associated data must exist in Production before migrating the fields that depend on them. Discarding unrelated packages (A) or publishing form templates (D) is unrelated or unnecessary for field migration workflows; fields and forms are handled separately. SAP best practices emphasize preparing all referenced master data and resource files to ensure smooth and error-free field migration.

NEW QUESTION # 24

How can you make the attributes of a Flex Master Data field reportable?

- A. Create a custom reportable field and use a defaulting expression to set the value of the Flex Master Data attribute
- B. Flex Master Data objects automatically include all attributes as reportable without any additional configuration.
- C. When the Flex Master Data Template is created, the attributes can be marked as reportable or not.
- D. Flex Master Data objects and their attributes cannot be made reportable

Answer: C

Explanation:

When creating a Flex Master Data (FMD) template, you can specify which attributes are reportable by marking them accordingly during template setup. Only attributes marked as reportable will be accessible in reporting tools within SAP Ariba.

While some users employ workarounds by creating custom fields with defaulting expressions to surface FMD attribute values, the

direct and supported method is to configure reportability at the attribute level within the FMD template itself. This capability ensures efficient and accurate reporting without requiring complex custom fields or expressions.

NEW QUESTION # 25

During which SAP Activate Methodology phase do you migrate the configuration to Production?

- A. Move
- B. Push
- C. Deploy
- D. Migrate

Answer: C

NEW QUESTION # 26

You have defined a custom field to have a default value based on another field. You have verified that the defaulting happens correctly the first time. However, when the dependent field change value, your custom field does not change. What scenarios could cause this? Note: There are 3 correct answers to this question.

- A. The parameter Application.Base.RecomputeValueOnFieldChange is not enabled
- B. The custom field has the property Lock Initial value enabled, which prohibits a field to be changed once it's set
- C. The defaulting Expression sets a value that violates the custom field Validity Condition
- D. Your custom field has the property Respect User Value enabled, and the user has manually entered another value into the field
- E. Your dependent field does not have the property Refresh screen on value change enabled

Answer: B,D,E

NEW QUESTION # 27
