Free AD0-E124 Test Questions & Reliable AD0-E124 Learning Materials

Choosing our products is choosing success. Our website offers the valid AD0-E124 vce exam questions and correct answers for the certification exam. All questions and answers from our website are written based on the AD0-E124 Real Questions and we offer free demo in our website. AD0-E124 exam prep is 100% verified and reviewed by our expert team who focused on the study of IT exam preparation.

Adobe Experience Manager DevOps Engineer Expert Sample Questions (Q132-Q137):

NEW QUESTION # 132

A customer is using the Content Transfer Tool (CTT) to migrate to AEM as a Cloud Service. Only published content should be migrated to the target Production instance.

Which two actions should the DevOps engineer take? (Choose two.)

- A. Install CTT on the source Publish instance and migrate all content to the target Publish instance.
- B. Install CTT on the source Author instance and migrate all content to the target Author instance.
- C. Install CTT on the source Author instance and migrate all content to the target Author and Publish instances.
- D. Copy and run the publish content tree workflow on the target Author instance.
- E. Install CTT on the source Publish instance and migrate all content to the target Author instance.

Answer: A,E

Explanation:

If a customer only wants published content on their new AEM as a Cloud Service Production instance, the cleanest source of truth is the legacy Publish instance, as it natively contains only activated content. To execute this, the Content Transfer Tool (CTT) should

be installed on the legacy Publish instance. From there, the data must be ingested into both the new Target Publish instance (so the website works) and the new Target Author instance (so authors can continue editing the live content). Therefore, the DevOps engineer must extract from the source publish and ingest to both target environments.

NEW QUESTION # 133

A DevOps engineer generates two content packages (/content/my-site): one from Author and one from Publish server, respectfully. Both packages have the same content structure. The developer notices the Publish package is larger than the Author package. What is causing this issue?

- A. Content was unpublished but not deleted
- **B. Content was deleted without being unpublished**
- C. Content versions need to be purged on Publish
- D. Delete unused content versions from the Author instance.

Answer: B

NEW QUESTION # 134

A developer needs to preview a new page before releasing publicly. The DevOps engineer confirms that AEM as a Cloud Service is the latest version and that the correct IP has been added to a new Allow List for the Preview Service. The developer is still not able to access the page.

What should the DevOps engineer do?

- **A. Unapply the default IP Allow List from the Preview Service**
- B. Unapply the default IP Allow List from the Publish Service
- C. Create an IP Allow List and apply to Publish Service
- D. Reapply the default IP Allow List from the Preview Service

Answer: A

NEW QUESTION # 135

The Non-Production Deployment Pipeline for an Adobe Experience Manager as a Cloud Service program terminates prematurely. Upon initial investigation, the DevOps engineer notes the following:

The pipeline status is ERROR

The last pipeline step is Build Images

The previous execution of the pipeline completed successfully

The DevOps engineer scans the log file, which produces the following output:

```
INFO [Apache Sling Repository Startup Thread #1] org.apache.sling.jcr.repoinit.impl.GroupMembershipVisitor Adding members  
[corp-comm-authors] to group 'contributor' ERROR [Apache Sling Repository Startup Thread #1]
```

```
com.adobe.granite.repository.impl.SlingRepositoryManager Exception in a SlingRepositoryInitializer, SlingRepository service  
registration aborted java.lang.RuntimeException: contributor is not a group com.google.javascript.jscomp.LoggerErrorManager  
println SEVERE: /libs/cq/gui/components/workflow/editor/clientlibs/workflow.js:8033: ERROR - This language feature is only  
supported for ECMASCRIPT6 mode or better: const declaration.
```

```
const panelContainerType = CQ.CoreComponents.panelcontainer.v1.utils.getPanelContainerType(editable); WARN [Apache Sling  
Repository Startup Thread #1] org.apache.jackrabbit.oak.query.ast.SelectorImpl The query read or traversed more than 100000  
nodes. To avoid affecting other tasks, processing was stopped. for query SELECT sling:vanityPath, sling:redirect,  
sling:redirectStatus FROM nt:base WHERE sling:vanityPath IS NOT NULL ERROR [Apache Sling Repository Startup Thread #1]  
org.apache.sling.jcr.resource.internal.helper.jcr.JcrNodeResourceIterator seek: Problem creating Resource for next node, skipping  
org.apache.jackrabbit.oak.query.RuntimeNodeTraversalException: The query read or traversed more than 100000 nodes. To avoid  
affecting other tasks, processing was stopped.
```

Which two steps should the DevOps engineer take next? (Choose two.)

- A. Add an oak:index definition for the sling:vanityPath property.
- B. File a ticket named "SEVERE ECMASCRIPT ERROR" in the project issue tracker and assign it to a Frontend Developer for further investigation.
- C. Temporarily switch the Non-Production pipeline from the development branch to the stable branch and rebuild to restore functionality in the environment.
- **D. Manually trigger the pipeline to see if it terminates at the same step with similar log output.**

- E. Inspect the most recent git commits in the pipeline branch for changes to reposit config.

Answer: D,E

NEW QUESTION # 136

A DevOps engineer is deploying a project in a Sandbox Program with an outdated environments version. The deployment fails at the build step on the Staging environment.

What should the DevOps engineer do?

- A. Recreate the Staging environment with an up-to-date AEM image while maintaining the Production environment intact.
- B. Update the Stage and Production environments via the Cloud Manager UI. Then rebuild the production pipeline.
- C. Delete the Sandbox Program via the Cloud Manager UI and recreate a Sandbox Program. Then rebuild the production pipeline.

Answer: C

Explanation:

Sandbox programs in AEM as a Cloud Service have strict limitations and behave differently than regular Production programs. They are ephemeral, meant for training or proof-of-concept, and often hibernate or become outdated if unused. If a Sandbox program falls into a broken state due to deeply outdated environment versions causing pipeline failures, the standard Adobe-recommended troubleshooting step for Sandboxes is not to perform standard updates, but to delete the Sandbox entirely via the Cloud Manager UI and recreate it to get a fresh, up-to-date baseline.

NEW QUESTION # 137

.....

PassTestking have made customizable Adobe AD0-E124 practice tests so that users can take unlimited tests and improve Adobe AD0-E124 exam preparation day by day. These AD0-E124 practice tests are based on the real examination scenario so the students can feel the pressure and learn to deal with it. The customers can access the result of their previous given AD0-E124 Exam history and try not to make any excessive mistakes in the future.
