- **B. Ingress Label Edge Router**
- C. Next Hop Router
- D. Label Switching Router

Answer: B

NEW QUESTION # 25

Choose two true statements that characterize Link State Routing

- A. Network converges quickly (within several seconds) after a topology change.
- B. Routers send a copy of their routing table to their neighbors periodically.
- C. Routers do not have precise knowledge of the entire network topology.
- D. Routers flood link information throughout the entire area.

Answer: A,D

NEW QUESTION # 26

Which of the following best describes an Ethernet bridge?

- A. A passive device simply used to connect two or more cables. Does not generate or amplify any signals.
- B. A device that receives a signal and based on the Layer 2 destination address, makes a decision on which ports the signal should be retransmitted.
- C. A device that receives and retransmits a signal out its other ports, but does not do any Layer 2 analysis of the data.
- D. A device that receives a signal and based on the Layer 3 destination address, makes a decision on which ports the signal should be retransmitted.

Answer: B

NEW QUESTION # 27

How does a VPRN service avoid the problem of overlapping IP addresses from different customers?

- A. You cannot have overlapping IP addresses. Customers must change their IP address assignment.
- B. A VPRN ignores IP addressing information and uses MAC addressing instead, which are always unique.
- C. Each VPRN service maintains a separate VPN routing and forwarding instance to separate customer routing information. This allows for overlapping addresses.
- D. A VPRN translates customer IP addresses to a private addressing scheme administered by the service provider.

Answer: C

NEW QUESTION # 28

(Click the Exhibit Button below) An Ethernet Local Area Network (LAN) consists of the following components:

Four 24-port hubs & Two 16-port switches
