SAP C-ACDET-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	• Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.
Topic 2	• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.
Topic 3	• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q48-Q53):

NEW QUESTION # 48
When performing migration to production for a Greenfield customer, which item needs to be made available in Production prior to creating the migration package in Intelligent Configuration Manager (ICM)?

- A. Approval Rules
- B. Locations
- C. Translations
- D. Users

Answer: C

Explanation:
Before creating and deploying migration packages with the Intelligent Configuration Manager (ICM), translation string resource files (custom field labels, help tips, validation messages, etc.) must be uploaded into Production via AML & Translations Upload. This ensures that migration bundles referencing these translations do not cause missing label or localization issues post-migration. Locations, users, and approval rules are either migrated as part of configuration packages or managed separately, and do not require prior upload to Production before creating migration packages.

NEW QUESTION # 49
What is the key role of the SAP Deployment Lead assigned to the project?

- A. To Test and Validate the solution prior to go-live
- B. To perform configuration changes required to the SAP Ariba Strategic Sourcing suite solutions
- C. To act as the liaison between the customer and SAP Support in resolving technical issues and manage customer escalations
- D. To advise the customer and partner in solution configurations

Answer: C

NEW QUESTION # 50

Which document outlines the roles and responsibilities for the SAP Deployment Lead assigned to your project?

- A. Deployment Description
- B. Partner Statement of Work
- C. Onboard Resource Center
- D. Inline Help

Answer: A

NEW QUESTION # 51

The full SAP Ariba Strategic Sourcing suite baseline (Greenfield baseline scenario) has been applied to the customer Test site. The customer and project team will configure SAP Ariba Sourcing and deploy that to the Production site, then configure and deploy the remaining solutions in stages. What does this mean for subsequent migration activities?

- A. If the baseline applied the full suite, the full suite must be configured and migrated to production at the same time.
- B. Subsequent migration activities will require a complete reconfiguration of existing solutions.
- C. Both SAP Ariba Sourcing as well as subsequent migration activities would be Brownfield deployments.
- D. Subsequent migration activities follow Bluefield deployment scenario.

Answer: D

Explanation:
In SAP Ariba deployments, when a full Greenfield baseline has been applied initially-meaning a fresh, full suite setup on the Test site-and the customer deploys a single solution (like Sourcing) to Production first, all subsequent deployments follow a Bluefield scenario. This means that later stages of deployment (e.g., Contracts, Supplier Risk) involve selective migration and incremental configuration changes to Production without rebuilding everything from scratch. Bluefield scenarios specifically accommodate environments where Production may already be live with transactions, requiring careful selective migration to avoid disruption. This contrasts with Brownfield, which typically involves upgrading or reusing existing deployments without full baseline resets. Also, Greenfield deployments do not require all suite components to migrate simultaneously; phased deployments are supported.
This approach ensures minimal risk during deployment and provides flexibility to roll out additional modules progressively.
Extract summary:SAP Ariba documentation highlights Bluefield for phased, incremental deployments post Greenfield baseline application to accommodate live production environments.

NEW QUESTION # 52

Which document must be returned to SAP before a Deployment Lead can be assigned to the project?

- A. Delivery Engagement Readiness Checklist
- B. Solution Design Matrix
- C. Deployment Overview
- D. Enablement workbook

Answer: A
