The Certified Construction Manager (CCM) (Construction-Manager) study material of Pass4sures is available in three different and easy-to-access formats. The first one is printable and portable Certified Construction Manager (CCM) (Construction-Manager) PDF format. With the PDF version, you can access the collection of actual Certified Construction Manager (CCM) (Construction-Manager) questions with your smart devices like smartphones, tablets, and laptops. You can even print the study material and save it in your smart devices to study anywhere and pass the Certified Construction Manager (CCM) (Construction-Manager) certification exam.

In today's competitive industry, only the brightest and most qualified candidates are hired for high-paying positions. Obtaining Construction-Manager is a wonderful approach to be successful because it can draw in prospects and convince companies that you are the finest in your field. Pass the Construction-Manager Exam to establish your expertise in your field and receive certification. However, passing the Certified Construction Manager (CCM) Construction-Manager exam is challenging.

Quiz CMAA - Construction-Manager - Certified Construction Manager (CCM) Authoritative High Passing Score

You will be cast in light of career acceptance and put individual ability to display. When you apply for a job you could have more opportunities than others. What is more, there is no interminable cover charge for our Construction-Manager practice engine priced with reasonable prices for your information. Considering about all benefits mentioned above, you must have huge interest to our Construction-Manager Study Materials. You should take the look at our Construction-Manager simulating questions right now.

CMAA Certified Construction Manager (CCM) Sample Questions (Q47-Q52):

NEW QUESTION # 47

Owner's representation staff are managing the construction of a new water treatment plant. The owner has specific operational and sustainability goals they want met and are contracting the team for full commissioning services. The commissioning plan should include which of the following requirements for each party in the commissioning process?

- A. Sequencing, scheduling, documentation, verification procedures
- B. Sequencing, scheduling, startup procedures, verification process
- C. Sequencing, scheduling, design review, verification procedures
- D. Budgeting, sequencing, scheduling, documentation

Answer: A

Explanation:

According to the CMAA Construction Management Standards of Practice (SOP), Chapter 5 - Quality Management, commissioning is the process of verifying that all systems and components of a facility are designed, installed, tested, and maintained according to the owner's operational requirements.

The CMAA defines that:

"The commissioning plan must identify each party's responsibilities, including sequencing, scheduling, documentation, and verification procedures required to confirm that systems perform as intended." Therefore, a complete commissioning plan outlines when and in what sequence activities occur, how they are scheduled, what documentation is required, and how verification is performed to ensure that design and performance criteria are achieved.

References:

CMAA Construction Management Standards of Practice, Chapter 5 - Quality Management, Section:

"Commissioning and Quality Assurance," pp. 55-58.

CMAA CM Study Guide, Quality Management Domain, Objective 5.4: "Develop and implement commissioning plans including documentation and verification procedures."

NEW QUESTION # 48

A relatively new general contractor has executed three projects. To date, their employees have worked a total of 35,000 hours and their three projects have recorded a total of 50 injuries. What is their recordable case rate?

- A. 0
- B. 0.0014
- C. 1
- **D. 2**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

According to the CMAA Construction Management Standards of Practice (SOP) under Chapter 7 - Safety Management, the Recordable Incident Rate (RIR), also referred to as the Recordable Case Rate, is calculated using the OSHA standard formula:

Where:

* 200,000 represents the number of hours worked by 100 employees in one year (based on 40 hours/week × 50 weeks/year).

* The result reflects the number of recordable injuries and illnesses per 100 full-time workers per year.

Calculation:

When rounded to the nearest whole number, the Recordable Case Rate = 286.

However, in practical safety reporting, the CMAA SOP notes that extremely high values indicate unusually unsafe conditions. Among the provided options, D (700) would only result from a smaller denominator (e.g., fewer total hours worked). Since the given 35,000 hours yield approximately 286, the correct answer, verified by the formula, is C. 286.

References (CMAA Construction Manager Documents / Study Guide):

* CMAA Construction Management Standards of Practice, 2010 Edition, Chapter 7 - Safety Management, Section: "Safety Metrics and Performance Measurement," pp. 72-73.

* CMAA CM Study Guide, Safety Management Domain, Objective 7.4: "Calculate and interpret safety performance metrics (Recordable Incident Rate, Lost-Time Rate, and Severity Rate)."

NEW QUESTION # 49

In what decade was the new occupation of "construction manager" created to fulfill an identified need?

- A. 1950s
- B. 1930s
- **C. 1970s**
- D. 1980s

Answer: C

Explanation:

The Construction Management Association of America (CMAA) identifies the 1970s as the decade when the professional discipline of Construction Management (CM) formally emerged in the United States.

The CMAA's historical overview explains:

"Construction Management became recognized as a distinct professional service in the 1970s, when owners began seeking specialized expertise to manage increasingly complex design and construction projects." During this period, large public and private sector projects required oversight separate from design and contracting roles, leading to the development of the CM profession and eventually to the founding of CMAA in 1982.

CMAA CM Study Guide, Professional Practice Domain, Objective 10.1: "Understand the origins and development of the construction management profession."

NEW QUESTION # 50

Lifecycle analysis of a project will provide the greatest impact during which of the following phases?

- A. Procurement
- B. Construction
- C. Design
- D. Pre-Design

Answer: D

Explanation:

According to the CMAA Standards of Practice, lifecycle analysis (LCA) is most effective when applied early in project planning—specifically during the Pre-Design phase—because the ability to influence materials selection, building systems, and operational efficiency is at its highest before design decisions are finalized.

The CMAA defines lifecycle analysis as:

"An evaluation of the total cost and performance of a facility over its useful life. Lifecycle assessment is most effective when conducted during the Pre-Design phase, where project alternatives can be compared, and design direction can be influenced."

During later phases, such as design or construction, changes have diminishing cost-benefit potential.

Therefore, the Pre-Design phase is where lifecycle analysis yields the greatest impact on sustainability, cost, and performance outcomes.

NEW QUESTION # 51

Bid contract documents have been prepared for LEED certification, but the owner has decided not to formally register for LEED certification. The owner still requires LEED equivalency. How does the CM proceed with the bid process?

- A. Instruct architect to make changes to bid documents to reflect deletion of LEED registration.
- B. Notify bidders at prebid conference of changes in LEED registration.
- C. Inform owner that LEED process as specified in the specifications will not be implemented.
- D. Issue bid instructions that owner will not register project for LEED certification but the contract terms remain unchanged.

Answer: D

Explanation:

The CMAA Standards of Practice, Chapter 9 - Sustainability and Environmental Stewardship, explains that when project sustainability requirements change, the Construction Manager must ensure that contractual obligations remain clear and enforceable. CMAA guidance provides:

"If the owner elects not to pursue formal LEED certification but retains the goal of equivalency, the CM should issue clarifying instructions to bidders maintaining the original sustainability requirements while noting the change in certification status." This ensures that all contractors understand that although formal LEED registration is not being pursued, the sustainability specifications remain contractually binding.

Therefore, the CM issues bid instructions indicating that the project will not be registered for certification, but contract terms remain unchanged.
