## Arch-303 Valid Test Forum & Arch-303 Exam Topic

As is known to us, different people different understanding of learning, and also use different methods in different periods, and different learning activities suit different people, at different times of the day. Our Arch-303 test questions are carefully designed by a lot of experts and professors in order to meet the needs of all customers. We can promise that our Arch-303 exam question will be suitable for all people, including student, housewife, and worker and so on. No matter who you are, you must find that our Arch-303 Guide Torrent will help you a lot. If you choice our product and take it seriously consideration, we can make sure it will be very suitable for you to help you pass your exam and get the Arch-303 certification successfully. You will find Our Arch-303 guide

torrent is the best choice for you.

## Salesforce Certified B2C Commerce Architect Sample Questions (Q39-Q44):

### NEW QUESTION # 39

The Client is planning to switch to a new Payment Service Provider (PSP). They have approached an Architect to understand the time and effort to Integrate the new PSP. The PSP offers a LINK cartridge compatible with SiteGenesis Pipelines, but the Client's website is built on Controllers.

Which two options should the Architect take into consideration before starting analysis? Choose 2 answers

- A. Produce a proof of concept converting the most essential pipelines into controllers and integrate the cartridge.
- B. Estimate the effort and risk to convert the LINK cartridge from pipelines to controllers.
- C. Reach out to the PSP development team and ask if a new cartridge version that supports controllers is under development
- D. Look for a different PSP that supports controllers and would not require conversion efforts.

**Answer: B,C**

Explanation:

When integrating a new Payment Service Provider (PSP) LINK cartridge designed for SiteGenesis Pipelines into a site built on Controllers, consider these options:

\* Option A (Estimate the effort and risk to convert the LINK cartridge from pipelines to controllers): Assessing the effort involved in converting the cartridge provides insight into the project scope, helping to manage risk and allocate resources effectively.

\* Option B (Reach out to the PSP development team and ask if a new cartridge version that supports controllers is under development): This can potentially save significant development time and resources if a compatible version is already planned or in progress.

These approaches help in making an informed decision on integration strategies, balancing between customization efforts and leveraging existing solutions.

### NEW QUESTION # 40

A B2C Commerce Developer has just finished implementing a new promotion code form on checkout. During review, an Architect notes that the form is not using CSRF validation correctly.

```
<form action="{URLUtils.continueURL()}" method="GET">
    <!-- ... the form input elements ... -->
    <input type="hidden"
        name="{dw.web.CSRFProtection.getTokenName()}"
        value="{dw.web.CSRFProtection.generateToken()}" />
    <input type="submit" value="Apply Promotion Code" />
</form>

formResult = cartForm.handleAction({
    'addPromoCode': function (formgroup) {
        var CSRFProtection = require('dw/web/CSRFProtection');

        var status;
        var result =
            cart,
            EnableCheckout: true,
            dontRedirect: true
    });
    status = cart.addCoupon(formgroup.couponCode.htmlValue);
    // ... adding code, based on the returned status ... */
    return result;
});
```

Which two options are best practice recommendations for dealing with CSRF validation? Choose 2 answers

- A. Ensure the CSRF protection is validated on form submission.
- B. Only use POST methods over HTTPS.
- C. Automatically renew the CSRF Token if expired.
- D. Only use GET methods over HTTPS.

**Answer: A,B**

Explanation:

For implementing CSRF (Cross-Site Request Forgery) protection correctly, especially in forms like promotion code submissions during checkout, best practices include:

\* Option A (Ensure the CSRF protection is validated on form submission): It is crucial to validate the CSRF token upon the form's submission to ensure that the request originates from a legitimate source and corresponds to the user's intended actions, enhancing security against CSRF attacks.

\* Option D (Only use POST methods over HTTPS): Using POST methods for transmitting form data helps mitigate the risk of CSRF attacks as opposed to GET methods which can be manipulated more easily via URL. Ensuring the communication is over HTTPS encrypts the transmission, securing the data from interception or tampering during transit.

These practices safeguard against common security vulnerabilities and ensure that the application adheres to secure coding standards.

#### NEW QUESTION # 41

A company that is a shoe-producer is doing Salesforce B2C Commerce implementation. In their Enterprise Resource Planning (ERP) system, the products are marked as being one of three types: boots, sandals, and sneakers. The business requirements based on the type are:

\* The messaging on Product Detail page is different

\* Customers are able to filter their Product Search Results

The customer's operations team asks about the format in which to send this value in the catalog.

Which data type should the Architect specify for this attribute in the Data Mapping document?

- A. A custom attribute of type string containing comma separated values.
- B. A custom attribute of type enum-of-string (single selectable value)
- C. A custom attribute type set-of-string containing multiple values.
- D. A custom attribute of type enum-of-string (multiselectable value).

**Answer: B**

Explanation:

For the shoe producer implementing Salesforce B2C Commerce, the attribute used to specify the type of shoes (boots, sandals, sneakers) should be set as a single selectable value, hence the use of an enum-of-string type. This data type allows for the selection of one option from a predefined list, which is ideal for cases where each product can only be categorized into one type. This ensures that data integrity is maintained while providing clear and distinct categorization that can easily be used for filtering on the Product Search Results page and for customized messaging on the Product Detail page.

#### NEW QUESTION # 42

Northern Trail Outfitters uses an Order Management system (OMS), which creates an order tracking number for every order 24 hours after receiving it. The OMS provides only a web-service interface to get this tracking number. There is a job that updates this tracking number for exported orders, which were last modified yesterday.

Part of this job's code looks like the following:

Based on the above description and code snippet, which coding best practice should the Architect enforce?

- A. Standard order import should be used instead of modifying multiple order objects with custom code.
- B. The transaction for updating of orders needs to be rewritten to avoid problems with transaction size.
- C. Post-processing of search results is a bad practice that needs to be corrected.
- D. Configure circuit breaker and timeout for the OMS web service call to prevent thread exhaustion.

**Answer: D**

Explanation:

Given that the OMS provides a web-service interface and updates tracking numbers for orders modified the previous day, it is crucial to manage the potential risks of service unavailability or delays that could lead to thread exhaustion in Salesforce Commerce.

Cloud. Implementing a circuit breaker pattern helps to manage failures gracefully by halting the interaction with the OMS if it becomes unresponsive, thereby preventing the service from impacting the entire system. Additionally, configuring timeouts ensures that the service calls do not hold up resources indefinitely. These strategies help maintain system stability and responsiveness, particularly when dealing with external systems over which there may be limited control.

#### NEW QUESTION # 43

The Client wants to offer custom made container products on its new B2C Commerce storefront. The Client provided two business requirements.

- \* Customer can specify container length, width, and height.
- \* Customer can specify the material that the container is made of.

The Client also provided the Architect a current data schema (shown below) for reference while preparing the technical documentation.

Which two gaps between the requirements and the data schema should the Architect discuss with the Client?  
Choose 2 answers

- A. The data schema includes a Color\_ID field, but there isn't a business requirement to allow the customer to specify container color.
- B. The data schema includes an implied structure that the customer's choices should be captured as custom objects, but there isn't a business requirement to do so
- C. The data schema includes a material Price\_Markup field, but there Isn't a business requirement to factor the material cost Into the final price calculation.
- D. The data schema includes unique identifiers for material and color fields, but neither are reflected in the business requirements.

**Answer: A,D**

Explanation:

The provided data schema includes several fields that do not match the stated business requirements, which focus on the custom dimensions and materials of the containers:

\* Option A: The inclusion of unique identifiers for materials and color fields in the data schema suggests a level of detail and structure around these attributes that is not reflected in the business requirements. If the business does not require tracking or differentiating materials beyond just naming them, this might be unnecessarily complex.

\* Option D: The data schema includes a Color\_ID field, which implies the ability to specify the color of the container. However, the business requirements do not mention color as a customization option available to customers. This discrepancy needs to be addressed to ensure that the database design aligns with actual business needs.

#### NEW QUESTION # 44

.....

If you have the certification the exam, you can enter a better company, and your salary will also be doubled. Arch-303 training
