Pass Guaranteed Quiz 2026 Salesforce Plat-Dev-210: Pass-Sure Trusted Salesforce Certified Omnistudio Developer Exam Resource

Once the user has used our Plat-Dev-210 learning material for a mock exercise, the product's system automatically remembers and analyzes all the user's actual operations. The user must complete the test within the time specified by the simulation system, and there is a timer on the right side of the screen, as long as the user begins the practice of Plat-Dev-210 Learning Materials, the timer will run automatic and start counting.

Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	• Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.
Topic 2	• Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.
Topic 3	• Omnistudio Data Mappers: This part of the exam measures the skills of a Data Engineer and focuses on the use of Omnistudio Data Mappers for extracting, transforming, and loading data. It includes identifying the appropriate Data Mapper for a given requirement, as well as determining the necessary Extract, Load, Transform, and Turbo Extract functionalities based on specific use cases. This section ensures the candidate can effectively map and manipulate data to support business processes.

Topic 4	• Omniscripts: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.

Reliable Plat-Dev-210 Test Price, Reliable Plat-Dev-210 Exam Pdf

Since One of the significant factors to judge whether one is competent or not is his or her Plat-Dev-210 certificates. So to get Plat-Dev-210 real exam and pass the Plat-Dev-210 exam is important. Generally speaking, certificates function as the fundamental requirement when a company needs to increase manpower in its start-up stage. In this respect, our Plat-Dev-210 practice materials can satisfy your demands if you are now in preparation for a certificate. We will be your best friend to help you achieve success!

Salesforce Certified Omnistudio Developer Sample Questions (Q17-Q22):

NEW QUESTION # 17
A developer is configuring a DataRaptor Load to Savecontract data. The developer needs to set the record type of the contact using DeveloperName.
Which two configuration actions should the developer take to set this up in the DataRaptor Load?

- A. Select RecordType in the Lookup object list. Development in the lookup Field list, and ID in the Lookup Requested Field list.
- B. Select RecordType in the Lookup Object list. ID in the Lookup Field list, and Development in the Lookup requested Field list.
- C. Check is Lookup property when mapping the fields.
- D. Add Link to RecordType object in the Contact Object with the id field of RecordType object.

Answer: A,C

Explanation:
A Set Values Action in a Value field and a Remote Action in an Additional Output value field can execute a function like CONCAT or DATEDIFF by using the syntax {{function(parameters)}}. For example,
{{CONCAT('Hello', 'World')}} or {{DATEDIFF('2021-01-01', '2021-01-31')}}.

NEW QUESTION # 18
What two advantages does a DataRaptor Turbo Extract have over a standard DataRaptor Extract?
Choose 2 answers

- A. It has better performance at runtime
- B. It is easier to configure
- C. It populates data in PDF and DocuSign format
- D. It supports complex field mappings

Answer: A,B

Explanation:
A DataRaptor Turbo Extract is a simplified version of a DataRaptor Extract that can retrieve data from a single object without changing the structure of the output data. It is easier to configure because it does not require defining extraction steps or JSON paths. It also has better performance at runtime because it uses a native query engine instead of a custom one

NEW QUESTION # 19
An OmniScript displays data from an API using Integration Procedure, but some of the data is missing.
Which two configuration errors could cause this? Choose 2 answers

- A. The element name for the missing data does not match the JSON node key in the Integration Procedure Response.
- B. The JSOW sent from the Integration Procedure Action does not match any of the Original Input for the Integration Procedure
- C. The missing data is trimmed in the Integration Procedure Action Response JSON Path.
- D. The Integration Procedure Preview Input Parameters do not match the JSON sent from the OmniScript.

Answer: A,B

Explanation:
The element name for the missing data must match the JSON node key in the Integration Procedure Response, otherwise the data will not be mapped correctly. The JSON sent from the Integration Procedure Action must match one of the Original Input for the Integration Procedure, otherwise the Integration Procedure will not execute properly. The Integration Procedure Preview Input Parameters and the Response JSON Path have no effect on displaying data in OmniScript.

NEW QUESTION # 20
A developer needs to retrieve data from an external system that stores policy data. The external system supports REST APIs to access and update the policies. Due to the volume of the policy data and peak hours of hours of business, calls to the REST APIs sometimes take longer than expected to response.
The developer creates an Integration Procedure to retrieve the policy data for use in an OmniScript.
Given the external system's known performance issues, which configuration should be used to implement the call to the external system?
Choose 2 answers

- A. Set the Timeout property on the HTTP Action in the Integration Procedure
- B. Check the Chain on Step Check on the HTTP Action in the Integration Procedure
- C. Configure a Remote action with timeout settings of 120000
- D. Check the Chainable checkbox on the integration procedure Action in the OmniScript

Answer: A,B

Explanation:
Setting the Timeout property on the HTTP Action in the Integration Procedure allows the developer to specify how long to wait for a response from the external system before timing out. Checking the Chain on Step Check on the HTTP Action in the Integration Procedure allows the developer to chain multiple HTTP Actions together and execute them sequentially. Configuring a Remote action with timeout settings of 120000 is not necessary, as it is already done by default in OmniStudio. Checking the Chainable checkbox on the integration procedure Action in the OmniScript has no effect on calling an external system.

NEW QUESTION # 21
Which two of these options can a developer use to retrieve data from a Salesforce object?
Choose 2 answers

- A. Lookup Input Element
- B. Data Mapper Extract Action
- C. Data Mapper Load Action
- D. Data Mapper Post Action

Answer: A,B

Explanation:
To retrieve (read) data from Salesforce objects:
* A. Data Mapper Extract Action - Correct. A DataRaptor Extract is specifically used to retrieve data from Salesforce, based on input parameters or context.
* C. Lookup Input Element - Correct. This is used within OmniScripts to look up a record by matching input data, essentially performing a read operation.
Incorrect Options:
* B. DataRaptor Post is not a valid DataRaptor type.
* D. DataRaptor Load Action is used for writing/updating data, not retrieving it.
