Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q19-Q24):

NEW QUESTION # 19
A MuteSoft developer must implement an API as a Mule application, run the application locally, and execute unit tests against the running application Which Anypoint Platform component can the developer use to fulfill all of these requirements?

- A. Anypoint Studio
- B. Anypoint CLI
- C. API Manager
- D. API Designer

Answer: A

Explanation:
Anypoint Studio is the integrated development environment (IDE) provided by MuleSoft for designing, developing, and testing Mule applications. Here's how it fulfills the developer's requirements:

* API Implementation:
* Design and Development: Anypoint Studio provides a graphical interface to design and develop APIs as Mule applications using pre-built components and connectors.
* Running Applications Locally:
* Local Testing: Developers can run Mule applications locally within Anypoint Studio to test and debug them before deploying to production.
* Unit Testing:
* MUnit Integration: Anypoint Studio includes MUnit, MuleSoft's testing framework. Developers can create and execute unit tests directly within the IDE.
* Test Execution: These tests can be run against the locally running Mule application to validate functionality and ensure code quality.

NEW QUESTION # 20

An organization needs to procure an enterprise software system to increase cross-selling opportunities and better track prospect data.

Which category of enterprise software has these core capabilities, when used for its typical and intended purpose?

* A. Supply Cham Management (SCM)
* B. IT Service Management (ITSM)
* C. Customer Relationship Management (CRM)
* D. Business-to-Business (B2B)

Answer: C

Explanation:
Customer Relationship Management (CRM) systems are designed to manage an organization's interactions with current and potential customers. Here's a detailed explanation:
* Core Capabilities:
* Cross-Selling Opportunities: CRM systems track customer interactions, preferences, and purchasing history, helping businesses identify opportunities for cross-selling and upselling.
* Prospect Data Management: CRM systems manage prospect information, track leads, and nurture relationships through the sales funnel.
* Typical Use:
* Sales Management: Helps sales teams manage and analyze customer interactions and data throughout the customer lifecycle.
* Marketing Automation: Assists in automating marketing campaigns, segmenting customer lists, and tracking campaign effectiveness.
* Customer Service: Provides tools for managing customer support cases, improving customer satisfaction, and retaining customers.

NEW QUESTION # 21

Which productivity advantage does Anypoint Platform have to both implement and manage an API?

* A. Automatic API governance
* B. Automatic API semantic versioning
* C. Automatic API proxy generation
* D. Automatic API specification generation

Answer: C

Explanation:
Anypoint Platform, MuleSoft's unified platform for API design and integration, offers several productivity advantages for both implementing and managing APIs. Among these features, automatic API proxy generation is particularly beneficial. Here's a step-by-step explanation:
* API Implementation:
* Design Center: In the Design Center, users can create API specifications using RAML or OAS.

This environment provides tools to design and document APIs effectively.
* Exchange: After defining the API, it can be published to Anypoint Exchange where it can be shared and discovered by others within the organization.
* Automatic API Proxy Generation:
* When an API is published to Exchange, Anypoint Platform allows for the automatic creation of an API proxy. An API proxy acts as a facade for your backend API, providing a layer of abstraction and security.
* Advantages:
* Security: Protects backend services by exposing only necessary endpoints and handling authentication, authorization, and rate limiting.
* Traffic Management: Helps in managing traffic through throttling and caching.
* Monitoring: Facilitates monitoring and logging to track API usage and performance.
* This automation saves time and reduces the complexity of manual proxy setup, allowing developers to focus on core business logic.
* API Management:
* API Manager: Provides a dashboard to manage API policies, versions, and SLA tiers. Users can apply security policies, monitor traffic, and analyze API usage.
* Monitoring: Integrated with Anypoint Monitoring, users get insights into API performance and health, enabling proactive management.

NEW QUESTION # 22

An integration team follows MuleSofts recommended approach to full lifecycle API development Which activity should this team perform during the API implementation phase?

- A. Use the API specification to build the MuleSoft application
- B. Validate the API specification
- C. Design the API specification
- D. Use the API specification to monitor the MuleSoft application

Answer: A

Explanation:
MuleSoft recommends a full lifecycle API development approach which includes several phases such as design, implementation, testing, deployment, and management. During the API implementation phase, the primary activity is to use the API specification to build the MuleSoft application. Here's a detailed explanation:
* API Design:
* Create API Specification: Initially, an API specification is created using RAML or OAS (OpenAPI Specification) to define the API's structure, endpoints, request/response formats, and security requirements.
* API Implementation:
* Build Mule Application: Using the API specification as a blueprint, the development team implements the MuleSoft application. This involves creating flows, integrating with backend systems, and ensuring the API functions as specified.
* APIKit: MuleSoft provides APIKit, a tool that automatically generates Mule flows based on the API specification, speeding up the development process.
* Testing: During implementation, unit tests (using MUnit) and integration tests are created to ensure the API behaves as expected.
* Validation and Monitoring:
* Validate Against Specification: Throughout the implementation phase, the API is continuously validated against the original specification to ensure compliance.
* Deployment and Monitoring: Post-implementation, the API is deployed, and tools like Anypoint Monitoring are used to monitor its performance and usage.
