## dbt-Analytics-Engineering Exam Materials are the Most Excellent Path for You to Pass dbt-Analytics-Engineering Exam

PDF4Test is a professional website to specially provide training tools for IT certification exams and a good choice to help you pass dbt-Analytics-Engineering exam, too. PDF4Test provide exam materials about dbt-Analytics-Engineering certification exam for you to consolidate learning opportunities. PDF4Test will provide all the latest and accurate exam practice questions and answers for the staff to participate in dbt-Analytics-Engineering Certification Exam.

## dbt Labs dbt Analytics Engineering Certification Exam Sample Questions (Q236-Q241):

### NEW QUESTION # 236

A package you depend on has released a major update with breaking changes. How might you approach the migration?

- A. Update your packages.yml to point to the new version and immediately refactor all your dependent models.
- B. Pin the package to the older version in your packages.yml file and plan a controlled migration.
- C. Fork the package and maintain your own custom version indefinitely.
- D. Review the release notes and the migration guide provided by the package maintainers.

**Answer: D**

Explanation:

Understanding the changes is key' Then plan a staged migration to minimize disruption. Forking should be a last resort.

#### NEW QUESTION # 237

you're working with a dbt project where a central model `fact_orders` is refactored. Several downstream models rely on this fact table. Which of the following is the MOST efficient way to determine which downstream models might be affected by this change?

- A. Manually review the code of all downstream models.
- B. Execute `dbt run` and observe for errors.
- C. Run `dbt test` to see which tests might fail.
- **D. Utilize the `dbt docs generate` and `dbt docs serve` commands.**
- E. Use the `dbt ls` command to generate a lineage graph.

**Answer: D**

Explanation:

While options B, D, and E can indirectly hint at broken models, they're not the most efficient methods. The `dbt docs` commands allow you to directly visualize and explore dependencies within your dbt project, making it the ideal choice for this scenario.

#### NEW QUESTION # 238

You want to configure dbt to prevent tests from running if one or more of their parent models is unselected.

Which test command should you execute?

Choose 1 option.

- A. `dbt test --select "orders" --indirect-selection=buildable`
- **B. `dbt test --select "orders" --indirect-selection=empty`**
- C. `dbt test --select "orders" --indirect-selection=cautious`
- D. `dbt test --select "orders"`

**Answer: B**

Explanation:

The correct answer is A: `dbt test --select "orders" --indirect-selection=empty`.

In dbt, the `--indirect-selection` flag controls how dbt handles indirectly related resources during selection, such as tests whose parent models may or may not be selected. By default, dbt may include related resources depending on the selection behavior.

`indirect-selection=empty` is the strictest form of selection. It means that dbt will not run tests whose parent models are not explicitly selected, even if the tests are indirectly related. This prevents executing tests on models that you did not intend to build or include in your workflow, ensuring test execution is tightly scoped.

Other options behave differently:

\* Option B (no `indirect-selection` flag) uses dbt's default behavior, which does include related tests, meaning tests could run even when their parent models were not selected.

\* Option C: `buildable` includes resources that can be built (e.g., when downstream dependencies require them).

\* Option D: `cautious` runs tests if their parents are selected transitively through dependencies.

Therefore, to prevent tests from running when parent models are unselected, you must use `--indirect-selection=empty`, making A the correct choice.

#### NEW QUESTION # 239

Your company wants to standardize pull request templates. Which information would be beneficial to include in such a template?

- **A. All of the above.**
- B. Specific instructions for the reviewer, if certain aspects need special attention.
- C. Checkboxes for confirming that tests have been run and documentation has been updated if necessary.
- D. A section to link to relevant design documents or specifications.

**Answer: A**

Explanation:

A: Checklists ensure core quality steps are followed. B: Linking design documents provides context for reviewers. C: Guidance helps reviewers focus their feedback.

#### NEW QUESTION # 240

You have a dbt macro that generates a list of models to execute dynamically. Which dbt command should you use in conjunction with this macro to actually run those models?

- **A. dbt parse to pre-compile the project graph, allowing model selection by reference.**
- B. dbt debug to step through model execution while using the macro's output
- C. dbt ls to retrieve project metadata and feed it into your custom execution logic.
- D. dbt build to create a task graph, extracting model nodes, and running them as needed.

**Answer: A**

Explanation:

A makes the dbt graph available, including macros, during execution- B gets metadata, but not for execution. C helps troubleshoot, but not run macros. D isn't designed for dynamic macro output
