NEW QUESTION # 451

What type of attack requires the least amount of technical equipment and has the highest success rate?

- A. Shrink wrap attack
- B. Social engineering
- C. War driving
- D. Operating system attacks

Answer: B

Explanation:

Definition of Social Engineering

Social engineering is a non-technical attack method that manipulates human behavior to gain unauthorized access to information, systems, or physical locations. It typically exploits trust, ignorance, or carelessness.

Characteristics

* Least Equipment Needed: Social engineering often requires no more than communication tools (e.g., phone, email) or physical presence.

* Highest Success Rate: Human error is a common vulnerability, making this approach highly effective, especially when attackers exploit psychological triggers like urgency, fear, or curiosity.

Comparison of Options

* A. War driving: Requires equipment for detecting wireless networks and relies on the presence of weak Wi-Fi configurations.

* B. Operating system attacks: Involves identifying and exploiting OS vulnerabilities, requiring technical expertise and tools.

* D. Shrink wrap attack: Exploits default or unpatched software installations, requiring more specific conditions than social engineering.

EC-Council References

* CISO Insights: Social engineering attacks like phishing, pretexting, and baiting are consistently highlighted as major threats in EC-Council's curriculum.

* Incident Reports: Case studies in EC-Council's guidance show social engineering's prevalence and effectiveness across various sectors.

Conclusion

Social engineering, due to its simplicity and effectiveness in exploiting human behavior, is the attack type requiring the least technical equipment and yielding the highest success rate.

NEW QUESTION # 452

Security related breaches are assessed and contained through which of the following?

- A. Incident response
- B. The IT support team
- C. A forensic analysis.
- D. Physical security team

Answer: A

Explanation:

- * Incident response encompasses the processes and actions taken to assess, contain, and mitigate security breaches.
- * It includes detection, investigation, containment, and recovery activities.

Why Other Options Are Incorrect:

- * A. IT support team: May assist but lacks the specialized role of incident response teams.
- * B. Forensic analysis: A part of the incident response process but does not encompass the entire containment effort.
- * D. Physical security team: Relevant for physical breaches, not digital security incidents.

EC-Council CISO Reference: Incident response is a critical component of the CISO role, focusing on minimizing damage and ensuring swift recovery from breaches.

- * Ensures that critical assets are included within compliance boundaries.

Why Other Options Are Incorrect:

- * A. How many credit card records are stored: Not directly related to security program effectiveness.
- * B. How many servers do you have: Irrelevant without knowing if they fall within scope.
- * D. What is the value of the assets at risk: Important but secondary to scope.
