Introduction to Isaca COBIT 2019 Exam

Isaca COBIT is a program of the ISACA, which is an acronym for Information Systems Audit and Control Association, that helps businesses identify and tackle their poor practices in managing information systems. Businesses use the COBIT guide to improve the performance of their IT systems. Isaca COBIT Foundation (2019) Exam is the entry-level exam for the COBIT Certification. The COBIT Foundation (2019) Exam assesses an individual's ability to apply basic concepts, definitions, principles, terminology, and standards related to COBIT. COBIT is a framework and methodology for IT Governance. This practice-oriented framework provides a set of guidelines for implementing appropriate controls across the enterprise. It assists in establishing policies and procedures that enable organizations to achieve their objectives related to the governance of IT operations. The target audience for this exam are individuals who have been involved with the application of IT Governance principles and practices within an organization or who have applied isaca's COBIT 4 framework as a practitioner or auditor.

ISACA COBIT 2019 Foundation Sample Questions (Q36-Q41):

NEW QUESTION # 36

One year after IT governance is implemented, what KEY question should be asked and evaluated?

- A. Has the enterprise achieved expected benefits?
- B. Has the enterprise leveraged lessons learned?
- C. Has the enterprise reduced its risk exposure?

Answer: A

NEW QUESTION # 37

Which of the following components of a governance system translates desired behavior into practical guidance?

- A. People, skills and competencies
- B. Principles, policies and frameworks
- C. Culture, ethics and behavior

Answer: B

NEW QUESTION # 38

Which element of a business case BEST enables senior leadership to assess the future success of the IT governance program?

- A. Quantified benefits
- B. Investment justification
- C. Qualitative perspective

Answer: B

Explanation:

Explanation

The investment justification element of a business case best enables senior leadership to assess the future success of the IT governance program. A business case is a document that provides the rationale and evidence for initiating, continuing, or terminating a project or program. A business case typically consists of several elements, such as problem statement, objectives, scope, benefits, costs, risks, assumptions, etc. The investment justification element of a business case describes how the project or program aligns with the enterprise strategy and objectives, how it supports the value creation process, how it compares with alternative options, and how it provides a positive return on investment (ROI). The investment justification element enables senior leadership to assess the future success of the IT governance program by showing how it contributes to the enterprise goals and delivers value to the stakeholders.12 References: COBIT 2019 Framework: Introduction and Methodology, COBIT 2019 Implementation Guide: Implementing an Information and Technology Governance Solution

NEW QUESTION # 39

Which of the following is an important principle of a proper governance framework?

- A. The governance framework should allow for flexibility in addressing new issues.
- B. The governance framework should be based on a single relevant standard, framework or regulation.
- C. The governance framework should be rigorous and focus exclusively on prioritized existing issues.

Answer: A

Explanation:

The principle that the governance framework should allow for flexibility in addressing new issues is an important principle of a proper governance framework. A governance framework is a conceptual model or structure that defines the key elements, relationships, and principles of a governance system. A proper governance framework should follow certain principles or guidelines that ensure its effectiveness, efficiency, and alignment with the enterprise goals and objectives. The principle that the governance framework should allow for flexibility in addressing new issues is an important principle of a proper governance framework because it helps to ensure that the governance system can adapt to changes in the internal or external environment, stakeholder needs, business objectives, etc.13 References: COBIT 2019 Framework: Introduction and Methodology, COBIT 2019 Design Guide: Designing an Information and Technology Governance Solution

NEW QUESTION # 40

Which of the following is the PRIMARY benefit or output derived from setting targeted capability levels and performing a capability-level gap analysis for selected processes?

- A. Development of a business case outline
- **B. Identification of process improvement opportunities**
- C. Development of enterprise goals that align to established targets
- D. Identification and mitigation of all identified risks

Answer: B

Explanation:

The capability levels are a measure of how well an enterprise performs its information and technology governance and management processes in terms of process attributes such as process performance, process definition, process deployment, process measurement, process control, process optimization etc. The capability levels range from 0 (incomplete) to 5 (optimizing), indicating the degree of maturity and effectiveness of an enterprise's information and technology governance and management processes. The targeted capability levels are the desired levels of performance that an enterprise wants to achieve for its information and technology governance and management processes, based on its strategy, objectives, needs, and expectations. The targeted capability levels provide a basis for defining the improvement goals and objectives for the processes. The capability-level gap analysis is a process that involves comparing the current capability levels of an enterprise's information and technology governance and management processes with the targeted capability levels, and identifying the gaps or differences between them. The capability-level gap analysis helps to determine the improvement actions and initiatives that are required to close the gaps and achieve the targeted capability levels. The primary benefit or output derived from setting targeted capability levels and performing a capability-level gap analysis for selected processes is identification of process improvement opportunities. This means that by setting targeted capability levels and performing a capability-level gap analysis for selected processes, an enterprise can identify the areas of weakness or inefficiency in its information and technology governance and management processes, and determine the potential solutions or enhancements that can improve its process performance, quality, value, etc. This will also help to align the information and technology governance system with the enterprise's strategy and objectives.
