Salesforce Administer, Extend, and Automate Salesforce Sample Questions (Q32-Q37):

NEW QUESTION # 32

Ursa Major Solar customer records have a lot of fields and Lightning components to give users a variety of information and available functions. Recently, users have noted that their pages take a long time to load and it's starting to negatively impact their experience. What should the administrator do to help diagnose where improvements can be made?

- A. Review the debug logs from the Developer Console.
- B. Use the Apex debugger while loading a customer record.
- **C. Click Analyze from the Lightning App Builder toolbar.**
- D. Check the debug logs found in the Environment section of Setup.

Answer: C

Explanation:

The Analyze feature in the Lightning App Builder toolbar is a tool that helps you optimize the performance of your record pages by providing recommendations and insights on how to improve page load time and user experience. It can help you identify which fields and components are taking the most time to load and suggest ways to reduce their impact. You can also compare your page performance with other pages in your org or with Salesforce best practices. NEW QUESTION # 33

What should an administrator do to keep secure fields protected in email templates'?

- **A. Remove the fields from the email.**
- B. Set up an approval process for email alerts.
- C. Use classic encrypted fields.
- D. Implement GDPR.

Answer: A

Explanation:

The best way to keep secure fields protected in email templates is to remove them from the email altogether. Classic encrypted fields are not supported in email templates, and implementing GDPR or setting up an approval process for email alerts do not prevent unauthorized users from viewing sensitive data in emails. Reference: https://help.salesforce.com/articleView?id=security_pe_classic_encryption_considerations.htm&type=5

NEW QUESTION # 34

A user at Ursa Major Solar is experiencing a flow error while trying to process a record to the next status. The users with the same access can process records without any errors.

What should the administrator do to troubleshoot the issue?

- A. Change the flow to run as System Context Without Sharing - Access All Data.
- B. Grant the user the Modify All permission to ensure they have full system access.
- C. Grant the user more data access by moving them higher in the role hierarchy.
- **D. Use the flow debug option and set the selection to Run as another user.**

Answer: D

Explanation:

The flow debug option is a tool that allows you to test and troubleshoot your flow by running it in debug mode and inspecting the values of variables and resources at each step. You can also set the debug mode to run as another user and see how the flow behaves for different users with different permissions and settings. In this case, using the flow debug option and setting the selection to run as another user can help identify why one user is experiencing a flow error while others are not. Reference: https://help.salesforce.com/s/articleView?id=sf.flow_debug.htm&type=5

NEW QUESTION # 35

Users at AW Computing are receiving a duplicate message when they enter contacts with common first and last names.

Management wants to improve the user experience but also keep the data Integrity of contacts.
