- A. Property
- B. Dynamic System Setting
- C. SOAP Connector
- D. Data Transform

Answer: B

NEW QUESTION # 444
You are building a web service connector for an application. The configuration values for the endpoint URLs change between staging and production phases. What is the best configuration to ensure that these values update between development phases?

- A. Create two application versions, one for staging and one for production, using the correct endpoint URL values.
- B. Create new Application Settings that contain the configuration settings for the endpoint URLs for the staging and production phases.
- C. Configure a data transform to update the endpoint URL values as the production phase changes.
- D. Configure a When rule to update the endpoint URL values as the production phase changes.

Answer: B

NEW QUESTION # 445
You have been asked to add to a form a check box control named "Auto Insurance Discount." Selecting the check box indicates that the user qualifies for the discount. However, in order to qualify, two conditions must be met.
First, the user must be older than 25. Second, the user has not received a traffic violation in three years or more. If both conditions are not met and the check box is selected, an error appears when the form is submitted.
Which one of the following approaches would you use in order to support this requirement?

- A. Use a single validate rule to verify both of these conditions.
- B. Use two validate rules, one for each condition.
- C. Associate an edit validate rule with the flow action that references the form.
- D. Use an edit validate rule that validates both conditions

Answer: A

NEW QUESTION # 446
An application contains the following rulesets. AccountManagement contains the rules for administering checking and savings accounts. AccountManagementInt contains supporting rules for integrating with other applications.
