100% Pass 2026 Professional Oracle 1z0-071: Online Oracle Database SQL Training

Our Oracle 1z0-071 practice exam software will record all the attempts you have made in the past and display any modifications or improvements made in each attempt. This Oracle Database SQL (1z0-071) exam simulation software enables you to track your progress and quantify how much you have improved.

Oracle Database SQL Sample Questions (Q54-Q59):

NEW QUESTION # 54

View the Exhibit and examine the description of the EMPLOYEES table.

You want to calculate the total remuneration for each employee. Total remuneration is the sum of the annual salary and the percentage commission earned for a year. Only a few employees earn commission.

Which SQL statement would you execute to get the desired output?

- A. `SELECT first_name, salary, salary*12+salary*commission_pct "Total" FROM EMPLOYEES;`

- B. SELECT first_name, salary (salary + NVL (commission_pct, 0)*salary)*12 "Total"FROM EMPLOYEES;
- C. SELECT first_name, salary, salary*12+(salary*NVL2 (commission_pct, salary,salary+commission_pct))"Total"FROM EMPLOYEES;
- D. SELECT first_name, salary, salary*12 + NVL(salary,0)*commission_pct, "Total"FROM EMPLOYEES;

Answer: C

NEW QUESTION # 55

Which statement will execute successfully?

- A. SELECT 1, 2 FROM DUAL UNION SELECT 3, 4 FROM DUAL ORDER BY 1, 2;
- B. SELECT 1, 2 FROM DUAL UNION SELECT 3, 4 FROM DUAL ORDER BY 3, 4;
- C. SELECT 1 FROM DUAL UNION SELECT 2 FROM DUAL ORDER BY 1, 2;
- D. SELECT 3 FROM DUAL UNION SELECT 4 FROM DUAL ORDER BY 3 ;

Answer: A

NEW QUESTION # 56

Examine the description of the EMPLOYEES table:

□ NLS_DATE_FORMAT is set to DD-MON-YY.

Which query requires explicit data type conversion?

- A. SELECT join date FROM employees where join date > *10-02-2018*;
- B. SELECT SUBSTR(join date, 1, 2)- 10 FROM employees;
- C. SELECT join date 11.'11 salary FROM employees;
- D. SELECT salary + 120.50 FROM employees;
- E. SELECT join date + 20 FROM employees;

Answer: A

NEW QUESTION # 57

Which two statements are true about a self join?

- A. It must be a full outer join.
- B. The join key column must have an index.
- C. It can be a left outer join.
- D. It can be an inner join.
- E. It must be an equijoin.

Answer: C,D

Explanation:

A self join is a regular join, but the table is joined with itself. This kind of join can take the form of an inner join, a left outer join, or even a full outer join depending on the requirement.

A . The join key column must have an index. (Incorrect)

While indexes can improve the performance of joins by reducing the cost of the lookup operations, they are not a requirement for a self join. A self join can be performed with or without an index on the join key columns.

B . It can be a left outer join. (Correct)

A self join can indeed be a left outer join. This is useful when you want to include all records from the 'left' side of the join (the table itself), even if the join condition does not find any matching record on the 'right' side (the table itself again).

Reference:

C . It must be a full outer join. (Incorrect)

A self join does not need to be a full outer join; it can be any type of join depending on what the query needs to accomplish.

D . It can be an inner join. (Correct)

Just like with any two different tables, a self join can be an inner join. This would return only the rows with matching values in the self join condition.

E . It must be an equijoin. (Incorrect)

Although self joins are often equijoins, meaning the join condition is based on equality, they do not have to be. Self joins can use other operators such as <, >, <=, >=, !=, etc., depending on the requirements of the query.

NEW QUESTION # 58

Which statement is true regarding external tables?

- A. The default REJECT LIMIT for external tables is UNLIMITED.
- B. ORACLE_LOADER and ORACLE_DATAPUMP have exactly the same functionality when used with an external table.
- C. The CREATE TABLE AS SELECT statement can be used to upload data into regular table in the database from an external table.
- D. The data and metadata for an external table are stored outside the database.

Answer: C

Explanation:
