## AP-215認證 & AP-215考試心得

現在有許多IT培訓機構都能為你提供Salesforce AP-215 認證考試相關的培訓資料，但通常考生通過這些網站得不到詳細的資料。因為他們提供的關於Salesforce AP-215 認證考試資料都比較寬泛，不具有針對性，所以吸引不了考生的注意力。

## 最新的 Accredited Professional Certification AP-215 免費考試真題 (Q39-Q44):

問題 #39

A client would like to integrate the following two sources:

Google Campaign Manager:

IAS:

After configuring a Parent-Child relationship between the files, which query should an implementation engineer run in order to QA the setup?

- A. Creative Name, Impressions, Analyzed Impressions
- B. Media Buy Name, Impressions
- C. Media Buy Type, Media Buy Name, Impressions, Analyzed Impressions
- D. Media Buy Type, Analyzed Impressions

答案： C

解題說明：

To QA the Parent-Child relationship setup between Google Campaign Manager and IAS data sources, it is essential to query fields that are common to both sources and that are relevant to the relationship. 'Media Buy Type' and 'Media Buy Name' are common identifiers between the two datasets. 'Impressions' from the Google Campaign Manager and 'Analyzed Impressions' from the IAS data are the metrics that should be compared to ensure they match or correlate as expected due to the Parent-Child relationship. The QA process involves checking that the data is correctly aligned and that the metrics from the parent source (Google Campaign Manager) are properly related to the metrics from the child source (IAS). 問題 #40

Which three statements accurately describe the different data stream types in Marketing Cloud intelligence?

- A. Each data stream type has Its own main entity
- B. Each data stream type has its own set of measurements
- C. All data stream types consist of at least one entity
- D. All data stream types share at least one mutual measurement
- E. Every data stream type includes the Medio Buy entity

答案： A,B,C

解題說明：

In Marketing Cloud Intelligence, data stream types are templates that define how data should be structured within the system. Each data stream type:

B. Includes at least one entity, which is a fundamental component of the data stream and represents a collection of related data points.

D. Has its own main entity, which is the primary focus of that particular data stream type and serves as the central point of reference for the associated data.

E. Contains its own unique set of measurements that are specific to the type of data being captured within that stream. These measurements represent quantitative data that can be analyzed within the context of the main entity and other dimensions present in the data stream.

A is incorrect because not every data stream type includes the Media Buy entity-this is specific to certain types of advertising data streams. C is incorrect because not all data stream types share at least one mutual measurement; measurements are typically unique to the data stream's focus and purpose.

問題 #41

Which two statements are correct regarding variable Dimensions in marketing Cloud intelligence's data model?

- A. All variables exist in every data set type, hence are considered as overarching dimensions
- B. These are stand alone dimensions that pertain to the data set itself rather than to a specific entity
- C. Variable Dimensions hold a Many-to-Many relationship with its main entity
- D. These dimensions are stored at the workspace level

答案： C,D

解題說明：

Variable dimensions in Marketing Cloud Intelligence's data model are flexible and can be associated with multiple entities, forming a

many-to-many relationship. These dimensions are configured and stored at the workspace level, allowing for customization and alignment with specific reporting needs and analytics practices.

#### 問題 #42

Your client would like to create a new harmonization field - Exam Topic.

The below table represents the harmonization logic from each source.

As can be seen from the table there are in fact two fields that hold a certain connection: Exam ID and Exam Topic. The connection indicates that where an Exam ID is found - a single Exam Topic value is associated with it.

The Client has a requirement to be able to view measurements from all data sources sliced by Exam Topic values as seen in the following example:

Which harmonization feature should an Implementation engineer use to meet the client's requirement?

- A. Transformers
- **B. Custom Classification**
- C. Calculated dimensions
- D. Fusion
- E. Parent Child

答案: B

解題說明:

To meet the client's requirement of slicing measurements by 'Exam Topic' values, an Implementation Engineer should use Custom Classification. This feature allows different Exam IDs to be classified into their respective Exam Topics, ensuring that data from all sources can be accurately harmonized and analyzed based on these topics.

#### 問題 #43

An implementation engineer has been provided with 4 different source files: 03m 16s

1. Twitter Ads
2. Creative Classification
3. Placement Classification
4. Campaign Category Classification

The main source is Twitter Ads (which includes various fields and KPIs), and the rest are classification files that connect to Twitter Ads and enrich different fields within it.

The connections between the files are described as follows:

1st Party Creative Classification

File structure/headers:

Creative ID - links back to Creative Key (Twitter Ads)

1st Party Placement Classification &

File structure/headers:

Category - links back to Campaign Category (Twitter Ads)

Which proposed solution meets the client's requirements for the above use case?

- A.
- B.
- C.
- **D.**

答案: D

解題說明:

For the given use case, where the Twitter Ads data stream needs to be enriched with classifications from three other sources, the correct implementation would involve creating links between the various fields across these files.

Option A is correct because it shows the correct usage of the fields from the classification files:

"Creative ID" in the Creative Classification file is linked to the "Creative Key" in the Twitter Ads data, allowing for enrichment with creative details.

"Placement ID" in the Placement Classification file is linked to a corresponding field in the Twitter Ads data, allowing for placement details to be added.

"Category" in the Campaign Category Classification file is linked back to "Campaign Category" in the Twitter Ads data, thus

enriching the campaign data with the correct categories.

This configuration correctly uses VLOOKUP to enrich the Twitter Ads data stream with additional details from the classification files, aligning with best practices for data integration and enrichment in Marketing Cloud Intelligence.
