Free PDF Salesforce Reliable Mule-Dev-301 Exam Pdf Are Leading Materials & Practical Mule-Dev-301: Salesforce Certified MuleSoft Developer II

By our three versions of Mule-Dev-301 study engine: the PDF, Software and APP online, we have many repeat orders in a long run. The PDF version helps you read content easier at your process of studying with clear arrangement, and the PC Test Engine version of Mule-Dev-301 Practice Questions allows you to take stimulation exam to check your process of exam preparing, which support windows system only. Moreover, there is the APP version of Mule-Dev-301 study engine, you can learn anywhere at any time.

Salesforce Certified MuleSoft Developer II Sample Questions (Q57-Q62):

NEW QUESTION # 57

An API has been built to enable scheduling email provider. The front-end system does very little data entry validation, and problems have started to appear in the email that go to patients. A validate-customer" flow is added validate the data.

What is he expected behavior of the 'validate-customer" flow?

- A. If all of the values are invalid the last validation error is raised:SCHEDULE:INVALID_CUSTOMER_NAME
- B. If the email address is invalid, processing continues to see if the appointment data and customer name are also invalid
- C. If the appointment date and customer name are invalid, a SCHEDULE:INVALID_APPOINTMENT_DATE error is raised
- **D. If only the email address is invalid a VALIDATION.INVALID_EMAIL error is raised**

Answer: D

Explanation:

The validate-customer flow uses an until-successful scope to validate each field of the customer data. The until-successful scope executes its processors until they succeed or exhausts the maximum number of retries. If any processor fails, it raises an error and stops executing the remaining processors. Therefore, if only the email address is invalid, a VALIDATION.INVALID_EMAIL error is raised and the validation of appointment date and customer name is skipped. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/until-successful-scope>

NEW QUESTION # 58

Refer to the exhibit.

Based on the code snippet, schema.json file, and payload below, what is the outcome of the given code snippet when a request is sent with the payload?

- A. The Mule flow will execute successfully with status code 200m and a response will display the message " Age in years which must equal to or greater than zero."
- **B. The Mule flow will throw the exception 'JSON:SCHEMA_NOT_HONOURED'**
- C. The Mule flow will execute successfully with status code 200, and the response will be the JSON sent in request
- D. The Mule flow will execute successfully with status code 204

Answer: B

Explanation:

Based on the code snippet, schema.json file, and payload below, the outcome of the given code snippet when a request is sent with the payload is that the Mule flow will throw the exception 'JSON:SCHEMA_NOT_HONOURED'. This is because the payload does not conform to the schema.json file, which specifies that age must be a number greater than or equal to zero. The payload has age as a string with a negative value, which violates the schema. Therefore, the validate-schema operation throws an error with type 'JSON:SCHEMA_NOT_HONOURED'. Reference: <https://docs.mulesoft.com/json-module/1.1/json-validate-schema>

NEW QUESTION # 59

Multiple individual Mule application need to use the Mule Maven plugin to deploy to CloudHub.

The plugin configuration should .. reused where necessary and anything project, specific should be property-based.

Where should the Mule Maven details be configured?

- A. Pom, xml
- B. Settings, xml
- C. A Bill of Materials (BOM) parent pm
- **D. A parent pom.xml**

Answer: D

Explanation:

To reuse Mule Maven plugin configuration across multiple individual Mule applications, the developer should use a parent pom.xml file. A parent pom.xml file defines common configuration for one or more child projects that inherit from it. The developer can specify common properties and dependencies for all child projects in the parent pom.xml file, such as Mule Maven plugin configuration, and then reference them in each child project's pom.xml file using placeholders. Reference:

<https://docs.mulesoft.com/mule-runtime/4.3/mmp-concept#parent-pom> https://maven.apache.org/guides/introduction/introduction-to-the-pom.html#Project_Inheritance

NEW QUESTION # 60

A Mule application need to invoice an API hosted by an external system to initiate a process. The external API takes anywhere between one minute and 24 hours to compute its process.

Which implementation should be used to get response data from the external API after it completes processing?

- A. Use a Scheduler to check for a response every minute
- B. Use an HTTP Connector inside Async scope to invoice the API and wait for a response
- C. **Expose an HTTP callback API in Mule and register it with the external system**
- D. Use an HTTP Connector to invoke the API and wait for a response

Answer: C

Explanation:

To get response data from the external API after it completes processing, the developer should expose an HTTP callback API in Mule and register it with the external system. This way, the external API can invoke the callback API with the response data when it is ready, instead of making the Mule application wait for a long time or poll for a response repeatedly. Reference:

<https://docs.mulesoft.com/mule-runtime/4.3/http-listener-ref#callback>

NEW QUESTION # 61

Refer to the exhibit.

□ A developer generates the base scaffolding for an API in Anypoint Studio.

Which HTTP status code is returned while testing using the API Kit console if no values are entered in client-secret?

- A. HTTP status code:500
- B. **HTTP status code:403**
- C. HTTP status code:400
- D. HTTP status code:200

Answer: B

Explanation:

Based on the code snippet and schema.json file below, when testing using the API Kit console if no values are entered in client-secret, HTTP status code 403 (FORBIDDEN) is returned. This is because client-secret is defined as a required header parameter in schema.json file, which means that it must be present in every request. If no values are entered in client-secret, then it is equivalent to omitting this header parameter, which violates the schema and causes APIKit Router to return HTTP status code 403. Reference:

<https://docs.mulesoft.com/apikit/4.x/apikit-4-headers>

NEW QUESTION # 62

.....

Our experts are not slavish followers who just cut and paste the content into our Mule-Dev-301 practice materials, all Mule-Dev-301 exam questions are elaborately compiled by them. Just a small amount of money, but you can harvest colossal success with potential bright future. So we have the courage and justification to declare the number one position in this area, and choosing Mule-Dev-301 Actual Exam is choosing success.
