

# Newest DP-300 Exam Questions: Administering Relational Databases on Microsoft Azure supply you high-quality Preparation Dump - Fast2test

## Learning path for Azure Database Administrator Associate

P.S. Free & New DP-300 dumps are available on Google Drive shared by Fast2test: <https://drive.google.com/open?id=1sU6BljHT0-5UfgsQsE8fccmVJAN18P99>

The Fast2test is committed to acing the Administering Relational Databases on Microsoft Azure (DP-300) exam questions preparation quickly, simply, and smartly. To achieve this objective Fast2test is offering valid, updated, and real Administering Relational Databases on Microsoft Azure (DP-300) exam dumps in three high-in-demand formats. These Administering Relational Databases on Microsoft Azure (DP-300) exam questions formats are PDF dumps files, desktop practice test software, and web-based practice test software.

Microsoft DP-300 certification exam is suitable for database administrators, developers, and IT professionals who want to enhance their skills in managing and deploying databases on the Azure platform. It is also a valuable credential for those who want to advance their careers in the field of cloud computing and database administration. By passing DP-300 exam, candidates can demonstrate their expertise in administering relational databases on Microsoft Azure and distinguish themselves from their peers in the industry.

Microsoft DP-300 certification exam is a valuable certification for IT professionals who work with Microsoft Azure. Administering Relational Databases on Microsoft Azure certification demonstrates the candidate's expertise in managing and administering databases on Azure, including provisioning, deployment, and maintenance. Passing the certification exam requires knowledge of Azure SQL Database, Azure SQL Managed Instance, and Azure Synapse Analytics, as well as the ability to perform tasks related to configuring security, optimizing performance, and troubleshooting issues.

Microsoft DP-300 Exam is a valuable certification for database administrators who want to enhance their skills in administering relational databases on Azure. Administering Relational Databases on Microsoft Azure certification provides a competitive edge in the job market and demonstrates your expertise in cloud-based database solutions. As the demand for cloud-based database solutions continues to grow, the Microsoft DP-300 certification is becoming increasingly essential for professionals in the field of database administration.

## DP-300 Reliable Study Questions & Exam DP-300 Discount

DP-300 Practice Material is from our company which made these DP-300 practice materials with accountability. And DP-300 Training Materials are efficient products. What is more, DP-300 Exam Prep is appropriate and respectable practice material. We know making progress and getting the certificate of DP-300 Training Materials will be a matter of course with the most professional experts in command of the newest and the most accurate knowledge in it. Our DP-300 exam prep has taken up a large part of market.

## Microsoft Administering Relational Databases on Microsoft Azure Sample Questions (Q250-Q255):

NEW QUESTION # 250

You have SQL Server on an Azure virtual machine that contains a database named DB1. DB1 is 30 TB and has a 1-GB daily rate of change.

You back up the database by using a Microsoft SQL Server Agent job that runs Transact-SQL commands. You perform a weekly full backup on Sunday, daily differential backups at 01:00, and transaction log backups every five minutes.

The database fails on Wednesday at 10:00.

Which three backups should you restore in sequence? To answer, move the appropriate backups from the list of backups to the answer area and arrange them in the correct order.

**Actions** **Answer Area**

- Monday, Tuesday, and then Wednesday differential backups
- Wednesday, Tuesday, and then Monday log backups
- full backup
- Monday, Tuesday, and then Wednesday log backups
- Wednesday, Tuesday, and then Monday differential backups
- Wednesday log backups
- Wednesday differential backup

### NEW QUESTION # 251

You have an on-premises Microsoft SQL Server 2019 instance that hosts a database named DB1.

You plan to perform an online migration of DB1 to an Azure SQL managed instance by using the Azure Database Migration Service.

You need to create a backup of DB1 that is accessible to the Azure Database Migration Service.

What should you run for the backup and where should you store the backup? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Run:

- A full backup and a log backup appended to the same file by using the WITH CHECKSUM option
- A full backup and a log backup to separate files by using the WITH CHECKSUM option
- A full backup and a log backup to separate files by using the WITH FILE\_SNAPSHOT option

Store the backup in:

- A Recovery Services vault
- An Azure Blob storage account
- An SMB file share

**Answer:**

Explanation:

Run:

- A full backup and a log backup appended to the same file by using the WITH CHECKSUM option
- A full backup and a log backup to separate files by using the WITH CHECKSUM option
- A full backup and a log backup to separate files by using the WITH FILE\_SNAPSHOT option

Store the backup in:

- A Recovery Services vault
- An Azure Blob storage account
- An SMB file share

## NEW QUESTION # 252

Task 5

You need to configure a disaster recovery solution for db1. When a failover occurs, the connection strings to the database must remain the same. The secondary server must be in the West US 3 Azure region.

**Answer:**

Explanation:

See the explanation part for the complete Solution

Explanation:

To configure a disaster recovery solution for db1, you can use the failover groups feature of Azure SQL Database. Failover groups allow you to manage the replication and failover of a group of databases across different regions with the same connection strings1. You can also use active geo-replication as an alternative, but you will need to update the connection strings manually after a failover2.

Here are the steps to create a failover group for db1 with the secondary server in the West US 3 region:

Using the Azure portal:

Go to the Azure portal and select your Azure SQL Database server that hosts db1.

Select Failover groups in the left menu and click on Add group.

Enter a name for the failover group and select West US 3 as the secondary region.

Click on Create a new server and enter the details for the secondary server, such as server name, admin login, password, and subscription.

Click on Select existing database(s) and choose db1 from the list of databases on the primary server.

Click on Configure failover policy and select the failover mode, grace period, and read-write failover endpoint mode according to your preferences.

Click on Create to create the failover group and start the replication of db1 to the secondary server.

Using PowerShell commands:

Install the Azure PowerShell module and log in with your Azure account.

Run the following command to create a new server in the West US 3 region: `New-AzSqlServer -ResourceGroupName <your-`

resource-group-name> -ServerName <your-secondary-server-name> -Location "West US 3" -SqlAdministratorCredentials \$(New-Object -TypeName System.Management.Automation.PSCredential -ArgumentList "<your-admin-login>", \$(ConvertTo-SecureString -String "<your-password>" -AsPlainText -Force)) Run the following command to create a new failover group with db1: New-AzSqlDatabaseFailoverGroup -ResourceGroupName <your-resource-group-name> -ServerName <your-primary-server-name> -PartnerResourceGroupName <your-resource-group-name> -PartnerServerName <your-secondary-server-name> -FailoverGroupName <your-failover-group-name> -Database db1 -FailoverPolicy Manual -GracePeriodWithDataLossHours 1 -ReadWriteFailoverEndpoint "Enabled" You can modify the parameters of the command according to your preferences, such as the failover policy, grace period, and read-write failover endpoint mode. These are the steps to create a failover group for db1 with the secondary server in the West US 3 region.

**NEW QUESTION # 253**

You have an on-premises Microsoft SQL Server 2019 database named SQL1 that uses merge replication. You need to migrate SQL1 to Azure. Which service should you use?

- A. Azure SQL Database
- B. Azure SQL Edge
- C. Azure SQL Managed instance
- D. SQL Server on Azure Virtual Machines

**Answer: D**

**NEW QUESTION # 254**

Hotspot Question

You have an Azure SQL database named db1 that contains an Azure Active Directory (Azure AD) user named user1. You need to test impersonation of user1 in db1 by running a SELECT statement and returning to the original execution context. How should you complete the Transact-SQL statement? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

The screenshot shows a SQL query editor with the following text and dropdown menus:

```
EXECUTE AS [ ] = 'user1@contoso.com'
```

The dropdown menu for the user name is open, showing the following options:

- CALLER
- LOGIN
- OWNER
- USER

```
GO
```

```
SELECT SUSER_SNAME ()
```

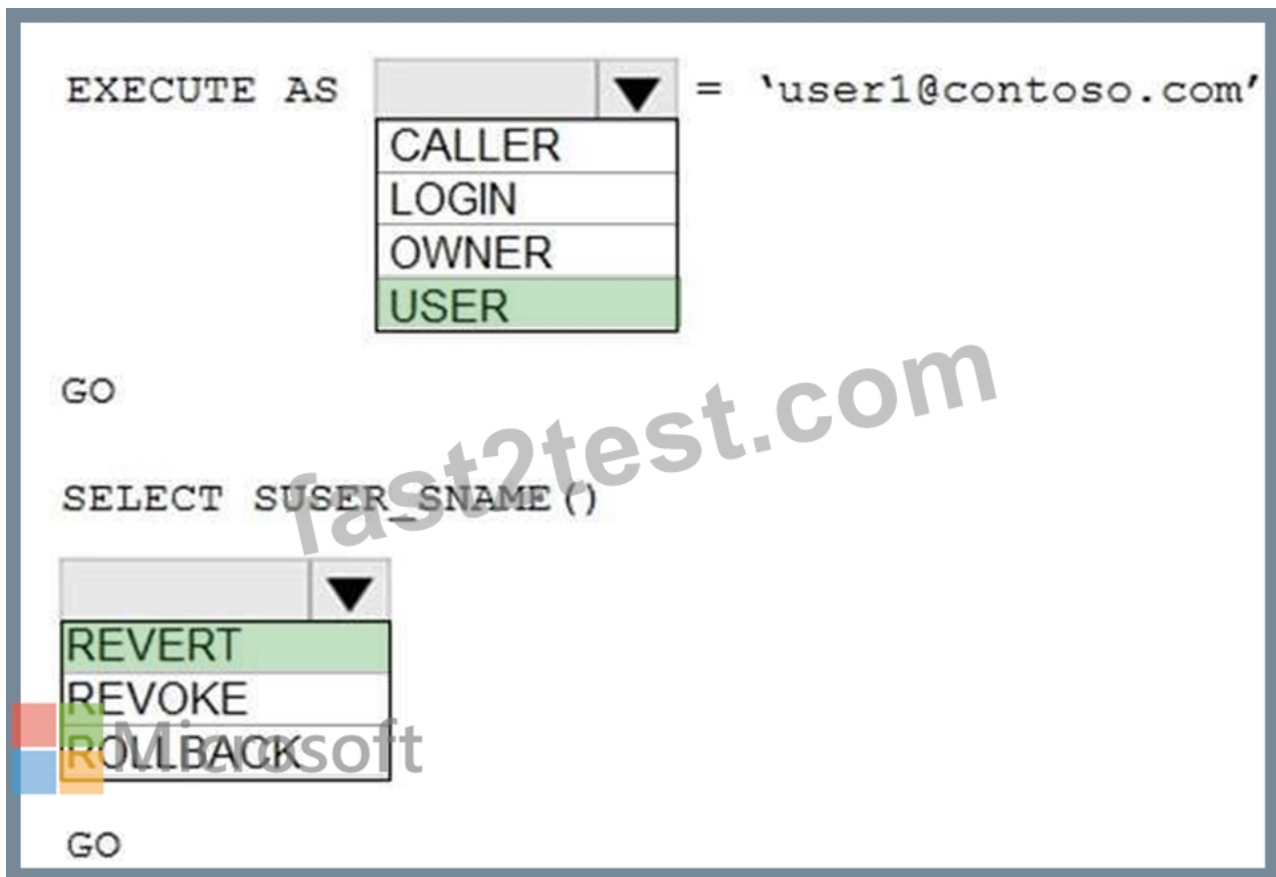

The dropdown menu for the SUSER\_SNAME function is open, showing the following options:

- REVERT
- REVOKE
- ROLLBACK

```
GO
```

**Answer:**

Explanation:

Explanation:

Box 1: USER

Using EXECUTE AS and REVERT to switch context.

The following example creates a context execution stack using multiple principals. The REVERT statement is then used to reset the execution context to the previous caller.

\*\*

```
EXECUTE AS USER = 'user2';
```

```
--The following REVERT statements will reset the execution context to the previous context.
```

```
REVERT;
```

\*\*

Box 2: REVERT

## NEW QUESTION # 255

.....

In this high-speed world, a waste of time is equal to a waste of money. As an electronic product, our DP-300 real study dumps have the distinct advantage of fast delivery. On one hand, we adopt a reasonable price for you, ensures people whoever is rich or poor would have the equal access to buy our useful DP-300 real study dumps. On the other hand, we provide you the responsible 24/7 service. Our candidates might meet so problems during purchasing and using our DP-300 Prep Guide, you can contact with us through the email, and we will give you respond and solution as quick as possible. With the commitment of helping candidates to pass DP-300 exam, we have won wide approvals by our clients. We always take our candidates' benefits as the priority, so you can trust us without any hesitation.
