# PDF Microsoft SC-100 Download - SC-100 Relevant Exam Dumps

P.S. Free & New SC-100 dumps are available on Google Drive shared by Itbraindumps: https://drive.google.com/open?id=17HLbuasxY7BabUlPrd1IuAULQ6X7fe0P

The results prove that Itbraindumps's SC-100 dumps work the best. And this is the reason that our SC-100 exam questions are gaining wide popularity among the ambitious professionals who want to enhance their workability and career prospects. Our experts have developed them into a specific number of SC-100 questions and answers encompassing all the important portions of the exam. They have keenly studied the previous SC-100 Exam Papers and consulted the sources that contain the updated and latest information on the exam contents. The end result of these strenuous efforts is set of SC-100 dumps that are in every respect enlightening and relevant to your to actual needs.

Microsoft SC-100 is a certification exam that measures the skills and knowledge of individuals in the field of cybersecurity architecture. SC-100 exam is intended for professionals who are responsible for designing and implementing cybersecurity solutions in various organizations.

Microsoft Cybersecurity Architect (SC-100) Exam is a certification exam designed to assess the skills and knowledge of individuals in the field of cybersecurity. SC-100 Exam focuses on identifying and mitigating security threats to Microsoft products and services. Microsoft Cybersecurity Architect certification is intended for professionals who want to demonstrate their expertise in cybersecurity and advance their career in this field.

Microsoft SC-100 Relevant Exam Dumps | Learning SC-100 Mode

Customizable practice tests comprehensively and accurately represent the actual Professional Microsoft SC-100 Certification Exam pattern. Many students have studied from product and passed the Microsoft Cybersecurity Architect (SC-100) test with ease. Our customers can receive questions updates for up to 1 year after purchasing the product. These free updates of questions will help them to prepare according to the latest syllabus.

Microsoft Cybersecurity Architect Sample Questions (Q129-Q134):

NEW QUESTION # 129
You are designing security for a runbook in an Azure Automation account. The runbook will copy data to Azure Data Lake Storage Gen2.
You need to recommend a solution to secure the components of the copy process.
What should you include in the recommendation for each component? To answer, select the appropriate options in the answer are a.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 130
Your company develops several applications that are accessed as custom enterprise applications in Azure Active Directory (Azure AD). You need to recommend a solution to prevent users on a specific list of countries from connecting to the applications. What should you include in the recommendation?

- A. user risk policies in Azure AD Identity Protection
- B. device compliance policies in Microsoft Endpoint Manager
- C. sign-in risk policies in Azure AD Identity Protection
- D. Azure AD Conditional Access policies
- E. activity policies in Microsoft Defender for Cloud Apps

Answer: E

Explanation:
https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/howto-conditional-access-policy-loca
https://docs.microsoft.com/en-us/power-platform/admin/restrict-access-online-trusted-ip-rules

NEW QUESTION # 131
You are designing a security operations strategy based on the Zero Trust framework.
You need to minimize the operational load on Tier 1 Microsoft Security Operations Center (SOC) analysts.
What should you do?

- A. Enable built-in compliance policies in Azure Policy.
- B. Automate data classification.
- C. Create hunting queries in Microsoft 365 Defender.
- D. Enable self-healing in Microsoft 365 Defender.

Answer: B

NEW QUESTION # 132
Hotspot Question
You have an Azure subscription.
You plan to implement Azure Synapse Analytics SQL dedicated pools and SQL serverless pools.

You need to recommend a solution to provide additional encryption-at-rest security for each type of pool. The solution must use customer-managed keys, whenever possible.
What should you recommend for each pool type? To answer, drag the appropriate recommendations to the correct pool types.
Each recommendation may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:
Explanation:
Box 1: Transparent Data Encryption (TDE and customer-managed keys
SQL serverless pools
Encryption of data at rest
A complete Encryption-at-Rest solution ensures the data is never persisted in unencrypted form.
Double encryption of data at rest mitigates threats with two, separate layers of encryption to protect against compromises of any single layer. Azure Synapse Analytics offers a second layer of encryption for the data in your workspace with a customer-managed key. This key is safeguarded in your Azure Key Vault, which allows you to take ownership of key management and rotation.
The data in the following Synapse components is encrypted with the customer-managed key configured at the workspace level:
SQL pools
*-> Dedicated SQL pools
*-> Serverless SQL pools
Data Explorer pools
Apache Spark pools
Azure Data Factory integration runtimes, pipelines, datasets.
Box 2: Transparent Data Encryption (TDE and customer-managed keys
Azure Synapse Analytics SQL dedicated pools
Secure a dedicated SQL pool (formerly SQL DW) in Azure Synapse Analytics Encryption Transparent Data Encryption (TDE) helps protect against the threat of malicious activity by encrypting and decrypting your data at rest. When you encrypt your database, associated backups and transaction log files are encrypted without requiring any changes to your applications. TDE encrypts the storage of an entire database by using a symmetric key called the database encryption key.
Customer-managed transparent data encryption - Bring Your Own Key
Customer-managed TDE is also referred to as Bring Your Own Key (BYOK) support for TDE. In this scenario, the TDE Protector that encrypts the DEK is a customer-managed asymmetric key, which is stored in a customer-owned and managed Azure Key Vault (Azure's cloud-based external key management system) and never leaves the key vault.

NEW QUESTION # 133
Your company has the virtual machine infrastructure shown in the following table.
The company plans to use Microsoft Azure Backup Server (MABS) to back up the virtual machines to Azure.
You need to provide recommendations to increase the resiliency of the backup strategy to mitigate attacks such as ransomware.
What should you include in the recommendation?

- A. Use geo-redundant storage (GRS).
- B. Require PINs to disable backups.
- C. Use customer-managed keys (CMKs) for encryption.
- D. Implement Azure Site Recovery replication.

Answer: B

Explanation:
Azure Backup
Checks have been added to make sure only valid users can perform various operations. These include adding an extra layer of authentication. As part of adding an extra layer of authentication for critical operations, you're prompted to enter a security PIN before modifying online backups.
Authentication to perform critical operations
As part of adding an extra layer of authentication for critical operations, you're prompted to enter a security PIN when you perform

Stop Protection with Delete data and Change Passphrase operations.
