Ace Microsoft MB-820 Exam in a Short Time with Real Questions
BONUS!!! Download part of DumpsQuestion MB-820 dumps for free: https://drive.google.com/open?id=1-aX_3mkD1H9BUhT1AhxE7Vqil8KY1uB_

Our company is a professional certificate study materials provider. We have occupied in this field for years, we are in the leading position of providing exam materials. MB-820 training materials of us is high-quality and accurate, for we have a profession team to verify and update the MB-820 answers and questions. We have received many good feedbacks from our customers for helping pass the exam successfully. Furthermore, we provide you free update for one year after purchasing MB-820 exam dumps from us.

The Microsoft Dynamics 365 Business Central Developer (MB-820) exam questions are the real, valid, and updated MB-820 Exam Questions that are specifically designed for quick and complete MB-820 exam preparation. With DumpsQuestion Microsoft Dynamics 365 Business Central Developer (MB-820) practice test questions you can start Microsoft MB-820 exam preparation immediately.

Latest MB-820 Mock Test & Demo MB-820 Test

Preparing authentic Microsoft MB-820 questions in the form of a PDF file is significant because it is the only choice that guarantees your success in the MB-820 exam. Microsoft MB-820 PDF questions are accessible without any installation. You will need a few

days to prepare successfully for the MB-820 Exam if you have DumpsQuestion's Microsoft Exam PDF Questions. This PDF file of Microsoft MB-820 questions is supported by any device like laptops, tablets, and smartphones.

Microsoft MB-820 Exam Syllabus Topics:

Topic	Details
Topic 1	• Describe Business Central: Describing the components and capabilities of Business Central, and describing the core solution and extensions approach for Business Central are focal points of this topic. It also explains the difference between Business Central Online and Business Central on-premises features.
Topic 2	• Install, develop, and deploy for Business Central: It delves into the installation and configuration of a Business Central development environment. Moreover, it discusses creating, debugging, and deploying an extension in Business Central.
Topic 3	• Integrate Business Central with other applications: Accessing Representational State Transfer (REST) services is discussed in this topic. It also explains implementation of APIs.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q56-Q61):

NEW QUESTION # 56
You create a Business Central report.
You need to insert values on the Request page to be saved for the next time the report is run.
What should you do?

- A. Set the TransactionType property to Update.
- B. Set the SaveValues property to true.
- C. Declare a 'SaveValues' variable and assign it to true on the OnOpenPage() trigger.
- D. Set the UseRequestPage property to true.

Answer: C

Explanation:
To ensure that the values inserted on the Request page of a Business Central report are saved for the next time the report is run, the SaveValues property (D) should be set to true. This property is available on the Request page of the report and, when set to true, allows the system to remember the values entered by the user, so they do not have to re-enter them each time they run the report. This feature enhances user experience by reducing repetitive data entry and ensuring consistency in report parameters across multiple executions. The other options mentioned, such as setting the Transaction Type property to Update (A) or declaring a Savevalues variable in the OnOpenPage trigger (B), are not directly related to saving user input on a report's Request page.

NEW QUESTION # 57
A company is setting up a sandbox environment.
You observe the following issues in Visual Studio Code:
* When you open the User Settings window, no AL command is available
* In the Problems tab. the error 'The target page Customer List for the extension object is not found' is displayed.
You need to identify a solution for each issue.
Which solutions should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.
☐

Answer:

Explanation:
☐

NEW QUESTION # 58
You create an 'AddltemsToJson'' procedure and publish it.

The procedure fails to run.

You need to fix the errors in the code.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Answer:

Explanation:

Explanation:

* In line 13, replace the Add method with Insert. = NO
* In line 15, replace the WriteTo method with ReadFrom. = NO
* Change the ItemObject variable type from JsonObject to JsonToken. = NO
* Move line 08 in the beginning of REPEAT .. UNTIL. = YES

The provided code is intended to serialize a list of items from the Item table into a JSON array format. Here is a breakdown of the code and the necessary corrections:

* In line 13, "ItemsArray.Add(ItemObject)": This line is correctly using the Add method to add the ItemObject to the ItemsArray. The Add method is the correct method to use for adding items to a JsonArray. Therefore, there is no need to replace Add with Insert.

* In line 15, "ItemsArray.WriteTo(RequestText)": The WriteTo method is used correctly to serialize the ItemsArray into a JSON formatted string and store it in the RequestText variable. The ReadFrom method is used for the opposite operation, i.e., to deserialize a JSON formatted string into a JsonArray, which is not the goal in this context. Hence, no change is needed here.

* Change the ItemObject variable type from JsonObject to JsonToken: The ItemObject variable is intended to hold JSON objects representing individual items, making JsonObject the appropriate type.

JsonToken is not a type used in this context within AL for Business Central, and thus the variable type should remain as JsonObject.

* Move line 08, "Clear(ItemObject)": This line should be moved inside the repeat loop to ensure that the ItemObject is cleared for each item in the loop. Placing it before the repeat would only clear it once before the loop starts, which could lead to incorrect serialization as the previous item's properties would not be cleared from the ItemObject.

The logic for serializing records into JSON is a common operation when interfacing with APIs or web services in Business Central, and the pattern shown in the code is typical for such operations.

NEW QUESTION # 59

A company is implementing Business Central.

In the per-tenant extension, TableA Header and TableA Line are document tables, and TableB Header and TableB Line are document history tables.

The company requires that the resulting dataset of query objects contain the following records:

* All records from TableA Header even if no matching record value exists in the linked TableA Line
* Records from TableB Header where a match is found in the linked TableB Line field You need to configure the linked data item to generate the required dataset.

Which SqlJoinType should you use? To answer, move the appropriate SqlJoinTypes to the correct dataset requirements. You may use each SqlJoinType once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

Answer:

Explanation:

Explanation:

* Include all records from TableA Header even if no matching record value exists in the linked TableA Line: LeftOuterJoin
* Include only matched records from TableB Header: InnerJoin

In SQL and similarly in Business Central when defining table relationships in query objects, the type of join determines how records from one table are combined with records from another table. Here's what each join type means in the context of the company's requirements:

* LeftOuterJoin:

* A LeftOuterJoin includes all records from the 'left' table (TableA Header) and the matched records from the 'right' table (TableA Line). If there is no match, the result is NULL on the side of the 'right' table. This is why it fits the requirement to include all records from TableA Header even if there is no matching record in TableA Line.

* InnerJoin:

* An InnerJoin includes records when there is at least one match in both tables. So, it will only include records from TableB Header where a corresponding match is found in TableB Line. If there is no match, the records from TableB Header will not appear in the result set. This aligns with the requirement to include only matched records from TableB Header.

By using these join types, the company can ensure that their dataset includes the appropriate records from the document tables and

document history tables according to their specified requirements.

NEW QUESTION # 60

A company is setting up a custom telemetry trace signal to send traces on failed customer statement emails.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Answer:

Explanation:

Explanation:

* The telemetry trace sends custom signals to an Application Insights resource specified in the extension's app.json file and on the tenant. = YES

* Dictionary keys for the extension name and version must be specified to identify the extension during analysis. = YES

* The telemetry trace sends events to Application Insights resources set up on the tenant. = YES Telemetry in Business Central allows developers to collect custom telemetry for extensions using Application Insights. The telemetry trace is used to send custom signals to an Application Insights resource. This resource is typically specified in the app.json file of the extension and must be configured on the tenant where the extension is installed.

The use of dictionary keys for the extension name and version is a best practice to identify the extension during analysis in Application Insights. These keys can be added to the telemetry trace to ensure that when the data is collected, it's clear which extension the data is associated with.

Finally, it is correct that the telemetry trace sends events to Application Insights resources that are set up on the tenant, enabling the collection and analysis of telemetry at the tenant level.

NEW QUESTION # 61

......

Some candidates may think that to get a certification cost too much time and efforts, but if they find the right exam materials, they will change their mind. Our MB-820 study questions will not occupy you much time. Whenever you have spare time, you can learn and memorize some questions and answers of our MB-820 Exam simulation. Gradually, you will learn much knowledge and become totally different from past. You will regret to miss our MB-820 practice materials. Come to purchase our MB-820 learning guide!
