In real life, every great career must have the confidence to take the first step. When you suspect your level of knowledge, and cramming before the exam, do you think of how to pass the PECB ISO-IEC-27035-Lead-Incident-Manager exam with confidence? Do not worry, PassExamDumps is the only provider of training materials that can help you to pass the exam. Our training materials, including questions and answers, the pass rate can reach 100%. With PassExamDumps PECB ISO-IEC-27035-Lead-Incident-Manager Exam Training materials, you can begin your first step forward. When you get the certification of PECB ISO-IEC-27035-Lead-Incident-Manager exam, the glorious period of your career will start.

Among global market, ISO-IEC-27035-Lead-Incident-Manager guide question is not taking up such a large share with high reputation for nothing. And we are the leading practice materials in this dynamic market. To facilitate your review process, all questions and answers of our ISO-IEC-27035-Lead-Incident-Manager test question is closely related with the real exam by our experts who constantly keep the updating of products to ensure the accuracy of questions, so all ISO-IEC-27035-Lead-Incident-Manager Guide question is 100 percent assured. It is a mutual benefit job, that is why we put every exam candidates' goal above ours, and it is our sincere hope to make you success by the help of ISO-IEC-27035-Lead-Incident-Manager guide question and elude any kind of loss of you and harvest success effortlessly.

ISO-IEC-27035-Lead-Incident-Manager Latest Exam Reviews & ISO-IEC-27035-Lead-Incident-Manager Exam Dumps & ISO-IEC-27035-Lead-Incident-Manager Actual Reviews

ISO-IEC-27035-Lead-Incident-Manager certifications are one of the most popular certifications currently. Earning ISO-IEC-27035-Lead-Incident-Manager certification credentials is easy, in first attempt, with the help of products. PassExamDumps is well-reputed brand among the professional. That provides the best preparation materials for ISO-IEC-27035-Lead-Incident-Manager

Certification exams. PassExamDumps has a team of ISO-IEC-27035-Lead-Incident-Manager subject experts to develop the best products for ISO-IEC-27035-Lead-Incident-Manager certification exam preparation.

PECB Certified ISO/IEC 27035 Lead Incident Manager Sample Questions (Q36-Q41):

NEW QUESTION # 36

Which factor of change should be monitored when maintaining incident management documentation?

- **A. Test results**
- B. Employee attendance records
- C. Market trends

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

When maintaining documentation for information security incident management, test results are critical indicators of how well current plans and controls are functioning. According to ISO/IEC 27035-2:2016 Clause 7.3.3, organizations must update documents based on test outcomes, incident experiences, or environmental changes.

Market trends (Option A) and attendance records (Option B) are not directly relevant to the content or accuracy of incident documentation.

Reference:

ISO/IEC 27035-2:2016 Clause 7.3.3: "Changes in the environment or test results should be used as input for reviewing documentation." Correct answer: C

-

NEW QUESTION # 37

Scenario 4: ORingo is a company based in Krakow, Poland, specializing in developing and distributing electronic products for health monitoring and heart rate measurement applications. With a strong emphasis on innovation and technological advancement, ORingo has established itself as a trusted provider of high-quality, reliable devices that enhance the well being and healthcare capabilities of individuals and healthcare professionals alike.

As part of its commitment to maintaining the highest standards of information security, ORingo has established an information security incident management process. This process aims to ensure that any potential threats are swiftly identified, assessed, and addressed to protect systems and information. However, despite these measures, an incident response team member at ORingo recently detected a suspicious state in their systems operational data, leading to the decision to shut down the company-wide system until the anomaly could be thoroughly investigated. Upon detecting the threat, the company promptly established an incident response team to respond to the incident effectively. The team's responsibilities encompassed identifying root causes, uncovering hidden vulnerabilities, and implementing timely resolutions to mitigate the impact of the incident on ORingo's operations and customer trust.

In response to the threat detected across its cloud environments, ORingo employed a sophisticated security tool that broadened the scope of incident detection and mitigation. This tool covers network traffic, cloud environments, and potential attack vectors beyond traditional endpoints, enabling ORingo to proactively defend against evolving cybersecurity threats. During a routine check, the IT manager at ORingo discovered that multiple employees lacked awareness of proper procedures following the detection of a phishing email. In response, immediate training sessions on information security policies and incident response were scheduled for all employees, emphasizing the importance of vigilance and adherence to established protocols in safeguarding ORingo's sensitive data and assets.

As part of the training initiative, ORingo conducted a simulated phishing attack exercise to assess employee response and knowledge. However, an employee inadvertently informed an external partner about the 'attack' during the exercise, highlighting the importance of ongoing education and reinforcement of security awareness principles within the organization.

Through its proactive approach to incident management and commitment to fostering a culture of security awareness and readiness, ORingo reaffirms its dedication to safeguarding the integrity and confidentiality of its electronic products and ensuring the trust and confidence of its customers and stakeholders worldwide.

Based on scenario 4, are the responsibilities of the incident response team (IRT) established according to the ISO/IEC 27035-2 guidelines?

- A. Yes, IRT's responsibilities include identifying root causes, discovering hidden vulnerabilities, and resolving incidents quickly to minimize their impact
- B. No, the responsibilities of IRT do not include resolving incidents
- **C. No, the responsibilities of IRT also include assessing events and declaring incidents**

Answer: C

Explanation:

Comprehensive and Detailed Explanation:

ISO/IEC 27035-2:2016 outlines comprehensive responsibilities for an incident response team, which include not just response and mitigation but also:

Assessing and classifying reported events

Determining if they qualify as incidents

Coordinating containment, eradication, and recovery actions

Conducting root cause analysis and lessons learned

While the scenario highlights the team's strengths in root cause analysis and resolution, it omits one key responsibility: the proper assessment and classification of the anomaly before response. This makes option C the most accurate.

Reference:

ISO/IEC 27035-2:2016, Clause 5.2.2 - "The IRT should assess events, determine whether they are incidents, and take appropriate actions." Therefore, the correct answer is C.

-

NEW QUESTION # 38

Which document provides guidelines for planning and preparing for incident response and for learning lessons from the incident response process?

- A. ISO/IEC 27035-2
- B. ISO/IEC 27037
- C. ISO/IEC 27035-1

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

ISO/IEC 27035-2:2016 is titled "Information security incident management - Part 2: Guidelines to plan and prepare for incident response." This document provides detailed guidance on establishing an incident response capability, planning for incident response, and implementing effective response actions. It also emphasizes the importance of post-incident analysis and lessons learned to improve future incident handling.

Key activities covered in ISO/IEC 27035-2 include:

- * Planning and preparing for incident handling (e.g., policy development, roles and responsibilities)
- * Establishing and training the incident response team (IRT)
- * Developing communication strategies and escalation procedures
- * Conducting root cause analysis and collecting lessons learned
- * Applying improvements to prevent recurrence

By contrast:

- * ISO/IEC 27035-1 provides high-level principles of incident management (Part 1: Principles).
- * ISO/IEC 27037 relates to the handling of digital evidence and is focused more on forensic practices than incident response preparation.

Reference Extracts:

* ISO/IEC 27035-2:2016, Introduction: "This part provides guidance on the planning and preparation necessary for effective incident response and for learning lessons from incidents."

* ISO/IEC 27035-2:2016, Clause 6.5: "Lessons learned and reporting can help improve future incident response and provide input to risk assessments and control improvements."

NEW QUESTION # 39

Which of the following statements regarding the principles for digital evidence gathering is correct?

- A. Reliability implies that all processes used in handling digital evidence should be unique and not necessarily reproducible
- B. Relevance means that the DEFR should be able to describe the procedures followed and justify the decision to acquire each item based on its value to the investigation
- C. Sufficiency means that only a minimal amount of material should be gathered to avoid unnecessary auditing and justification efforts

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Digital evidence gathering, as outlined in ISO/IEC 27037 and referenced in ISO/IEC 27035-2, must adhere to several core principles—reliability, sufficiency, relevance, and integrity. Relevance, in particular, means that the Digital Evidence First Responder (DEFR) must ensure that any item collected has direct or potential bearing on the investigation.

Relevance also requires:

Clear justification for why an item was acquired

Ability to trace the decision-making process

Alignment with investigation objectives

Option A misrepresents "sufficiency," which does not mean minimal collection but rather collecting enough evidence to support conclusions without overburdening the investigation. Option B contradicts the principle of reliability, which requires that processes be standardized and reproducible.

Reference:

ISO/IEC 27037:2012, Clause 6.2.2.4: "Relevance is determined by the value of the digital evidence in addressing the objectives of the investigation." ISO/IEC 27035-2:2016 references this standard in Clause 7.4.4 regarding forensic evidence handling.

Correct answer: C

-

NEW QUESTION # 40

Scenario 3: L&K Associates is a graphic design firm headquartered in Johannesburg, South Africa. It specializes in providing innovative and creative design solutions to clients across various industries. With offices in multiple parts of the country, they effectively serve clients, delivering design solutions that meet their unique needs and preferences.

In its commitment to maintaining information security, L&K Associates is implementing an information security incident management process guided by ISO/IEC 27035-1 and ISO/IEC 27035-2. Leona, the designated leader overseeing the implementation of the incident management process, customized the scope of incident management to align with the organization's unique requirements.

This involved specifying the IT systems, services, and personnel involved in the incident management process while excluding potential incident sources beyond those directly related to IT systems and services.

Based on the scenario above, answer the following question:

Is the incident management scope correctly determined at L&K Associates?

- A. No, the incident management scope is overly restrictive, excluding potential incident sources beyond those directly related to IT systems and services
- B. No, the incident management scope is too broad, encompassing all IT systems regardless of relevance
- **C. Yes, the incident management scope is customized to align with the organization's unique needs**

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

ISO/IEC 27035-1:2016 encourages organizations to define the scope of incident management based on their own risk environment, business model, and available resources. This scope should be tailored to focus on the systems, services, and personnel that are most critical and relevant to the organization's operations.

In this scenario, Leona appropriately aligned the scope with L&K Associates' specific IT infrastructure and business processes, deliberately including relevant IT systems and associated personnel while excluding unrelated sources. This customization is consistent with best practices and ensures that the incident management process remains focused, efficient, and manageable.

ISO/IEC 27035-2, Clause 4.2, emphasizes that "the scope of incident management should be defined in a way that it supports the organization's objectives and risk environment." Therefore, the correct answer is A: Yes, the incident management scope is customized to align with the organization's unique needs.
