As the saying goes, practice makes perfect. We are now engaged in the pursuit of Craftsman spirit in all walks of life. Professional and mature talents are needed in each field, similarly, only high-quality and high-precision JS-Dev-101 practice materials can enable learners to be confident to take the qualification examination so that they can get the certificate successfully, and our JS-Dev-101 learning materials are such high-quality learning materials, it can meet the user to learn the most popular test site knowledge. Because our experts have extracted the frequent annual test centers are summarized to provide users with reference. Only excellent learning materials such as our JS-Dev-101 practice materials can meet the needs of the majority of candidates, and now you should make the most decision is to choose our products.

Salesforce JS-Dev-101 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Browser and Events: Covers DOM manipulation, event handling and propagation, browser-specific APIs, and using Browser Developer Tools to inspect code behavior.
Topic 2	<ul style="list-style-type: none"> Server Side JavaScript: Covers Node.js implementations, CLI commands, core modules, and package management solutions for given scenarios.
Topic 3	<ul style="list-style-type: none"> Debugging and Error Handling: Covers proper error handling techniques and the use of the console and breakpoints to debug code.
Topic 4	<ul style="list-style-type: none"> Objects, Functions, and Classes: Covers function, object, and class implementations to meet business requirements, along with the use of modules, decorators, variable scope, and execution flow.
Topic 5	<ul style="list-style-type: none"> Testing: Covers evaluating unit test effectiveness against a block of code and modifying tests to improve their coverage and reliability.
Topic 6	<ul style="list-style-type: none"> Asynchronous Programming: Covers asynchronous programming concepts and understanding how the event loop controls execution flow and determines outcomes.

Free PDF The Best Salesforce - JS-Dev-101 Study Demo

We committed to providing you with the best possible Salesforce Certified JavaScript Developer - Multiple Choice (JS-Dev-101) practice test material to succeed in the Salesforce JS-Dev-101 exam. With real Salesforce Certified JavaScript Developer - Multiple Choice (JS-Dev-101) exam questions in PDF, customizable Salesforce JS-Dev-101 practice exams, free demos, and 24/7 support, you can be confident that you are getting the best possible JS-Dev-101 Exam Material for the test. Buy today and start your journey to Salesforce Certified JavaScript Developer - Multiple Choice (JS-Dev-101) exam success with VCEdumps!

Salesforce Certified JavaScript Developer - Multiple Choice Sample Questions (Q136-Q141):

NEW QUESTION # 136

A developer has an ErrorHandler module that contains multiple functions.
What kind of export should be leveraged so that multiple functions can be used?

- A. multi
- B. default
- C. all
- D. **named**

Answer: D

NEW QUESTION # 137

A developer needs the function personalizeWebsiteContent to run when the webpage is fully loaded (HTML and all external resources).
Which implementation should be used?

- A. **Add a listener to the window object to handle the load event**
- B. Add a handler to the personalizeWebsiteContent script to handle the DOMContentLoaded event
- C. Add a handler to the personalizeWebsiteContent script to handle the load event
- D. Add a listener to the window object to handle the DOMContentLoaded event

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract JavaScript Knowledge JavaScript defines two main page-loading events:

DOMContentLoaded

Fires when the HTML document has been completely parsed.

External resources like images, stylesheets, iframe contents, etc. may not be loaded yet.

load event on window

Fires when:

HTML is fully parsed

All dependent resources (images, scripts, CSS, fonts, etc.) are fully loaded The requirement states:

"when the webpage is fully loaded (HTML content and all related files)" This aligns exactly with the window load event.

Implementation:

```
window.addEventListener("load", personalizeWebsiteContent);
```

This matches option B.

JavaScript knowledge references (text-only)

DOMContentLoaded fires after HTML parsing only.

load fires after all page resources finish loading.

The window object is the correct target for listening to the full load event.

NEW QUESTION # 138

A developer implements a function that adds a few values.

```
```\nfunction sum(num1, num2, num3) {\n  if (num3 === undefined) {\n
```

```

num3 = 0;
}
return num1 + num2 + num3;
}
...

```

Which three options can the developer invoke for this function to get a return value of 10?  
Choose 3 answers

- A. `sum(5,5,0);`
- B. `sum(5)(5);`
- C. `sum(10,0);`
- D. `sum()(5)(5);`
- E. `sum()(10);`

**Answer: B,E**

### NEW QUESTION # 139

A developer uses a parsed JSON string to work with user information as in the block below:

```

01 const userInfo = {
02 "id": "user-01",
03 "email": "user01@universalcontainers.demo",
04 "age": 25
05 };

```

Which two options access the email attribute in the object?

- A. `userInfo.get("email")`
- B. `userInfo[email]`
- C. `userInfo["email"]`
- D. `userInfo.email`

**Answer: C,D**

Explanation:

Comprehensive and Detailed Explanation From JavaScript Knowledge:

`userInfo` is a plain JavaScript object:

```

{
id: "user-01",
email: "user01@universalcontainers.demo",
age: 25
}

```

You can access object properties in two standard ways:

Dot notation: `object.propertyName`

Bracket notation: `object['propertyName']`

Apply to each option:

A. `userInfo.email`

Correct dot notation; accesses `"user01@universalcontainers.demo"`.

B. `userInfo.get("email")`

`.get()` is a method on `Map` instances, not on plain objects.

A regular object does not have a `.get` method; this would be `TypeError`.

C. `userInfo["email"]`

Correct bracket notation; string `"email"` is used as the property key.

Returns `"user01@universalcontainers.demo"`.

D. `userInfo[email]`

Here `email` is treated as a variable, not a string literal.

Unless there is a variable named `email` defined with a value matching a property key, this will either:

Throw a `ReferenceError` (if `email` is not defined), or

Use the value of `email` as a computed key (not what is intended here).

It is not the correct way to access the `"email"` property literal.

Therefore, the correct ways are:

Answer: A, C

Relevant concepts: object property access ( . vs [] ), plain objects vs Map, literal property names vs computed property names.

### NEW QUESTION # 140

Given a value, which two options can a developer use to detect if the value is NaN?

- A. value === Number.NaN
- B. Object.is(value, NaN)
- C. value === NaN
- D. isNaN(value)

**Answer: B,D**

Explanation:

Comprehensive and Detailed Explanation From Exact JavaScript knowledge:

We already know NaN is special: it is not equal to itself.

Check each:

A . value === Number.NaN

Number.NaN is NaN.

NaN === NaN is always false.

This will never be true; cannot reliably detect NaN.

B . value === NaN

NaN === NaN is also always false.

Again, this never detects NaN.

C . isNaN(value)

Global isNaN converts its argument to a number and then checks if the result is NaN.

This can detect NaN, but it may also return true for non-number values that coerce to NaN, such as isNaN('foo').

Regardless, it is a standard way to detect if a value is "NaN-like" in JavaScript.

D . Object.is(value, NaN)

Object.is(NaN, NaN) returns true.

This is a strict way to detect a value that is exactly NaN (no coercion).

Therefore, among the given choices, the two viable ways to detect NaN are:

isNaN(value)

Object.is(value, NaN)

---

### NEW QUESTION # 141

.....

The optimization of JS-Dev-101 training questions is very much in need of your opinion. If you find any problems during use, you can give us feedback. We will give you some benefits as a thank you. You will get a chance to update the system of JS-Dev-101 Real Exam for free. Of course, we really hope that you can make some good suggestions after using our JS-Dev-101 study materials. We hope to grow with you and help you get more success in your life.
