CompTIA Linux+ Certification Exam Sample Questions (Q42-Q47):

NEW QUESTION # 42

A Linux administrator needs to analyze a compromised disk for traces of malware. To complete the analysis, the administrator wants to make an exact, block-level copy of the disk. Which of the following commands accomplishes this task?

- A. `dd if=/dev/sdc of=/tmp/image bs=8192`
- B. `cpio -i /dev/sdc -ov /tmp/image`
- C. `cp -rp /dev/sdc/* /tmp/image`
- D. `tar cvzf /tmp/image /dev/sdc`

Answer: A

Explanation:

The `dd` command performs a low-level, block-by-block copy of a device. Using `if=/dev/sdc` (input file) and `of=/tmp/image` (output file) with a block size (`bs`) ensures an exact replica of the disk, suitable for forensic analysis.

NEW QUESTION # 43

A DevOps engineer needs to create a local Git repository. Which of the following commands should the engineer use?

- A. `git init`
- B. `git add`
- C. `git config`
- D. `git clone`

Answer: A

Explanation:

The `git init` command initializes a new, empty Git repository in the current directory, making it the correct choice for creating a local repository.

NEW QUESTION # 44

Users connecting to a MySQL database on a Linux system report frequent errors. An administrator reviews the following partial output of the `/proc/meminfo` and `free` commands:

```
total      used      free
Mem:      1011966    151930    860036
Swap:     1191972    1181716    10256

MemTotal:    1011966 kB
MemFree:
...
SwapTotal:   1191972 kB
SwapFree:    10256 kB
```

Which of the following should the administrator do to ensure that the MySQL service will continue to run even if the system runs out of swap space? (Choose two.)

- A. Issue the `mkswap /dev/sda2; swapon -v /dev/sda2` command.
- B. Reload the `/etc/fstab` file by issuing the `mount -a` command. (Not sufficient alone)
- C. Issue the `sysctl -w vm.overcommit_memory=2` command. (Invalid key)
- D. Issue the `sysctl -w vm.overcommit_ratio=100` command.
- E. Issue the `dd if=/dev/zero of=/swapfile bs=1024 count=65536` command.
- F. Use disk quotas on the swap space to prevent MySQL from overutilizing the swap partition.

Answer: A,E

Explanation:

Creating a swap file with `dd if=/dev/zero of=/swapfile bs=1024 count=65536` allocates additional swap space that MySQL can use when RAM is exhausted.

Formatting and enabling a swap partition with `mkswap /dev/sda2; swapon -v /dev/sda2` brings another swap device online, further increasing the system's swap capacity.

NEW QUESTION # 45

A systems administrator needs to validate that the `dm_multipath` driver was loaded in a Linux system. Which of the following commands should the administrator use?

- A. `modprobe | grep dm_multipath`
- B. `modinfo | grep dm_multipath`
- C. `lsmod | grep dm_multipath`
- D. `insmod | grep dm_multipath`

Answer: C

Explanation:

`lsmod` lists currently loaded kernel modules; piping to `grep dm_multipath` confirms whether that specific driver is active in the running kernel.

NEW QUESTION # 46

Which of the following Ansible components contains a list of hosts and host groups?

- A. Inventory
- B. Collection
- C. Fact
- D. Playbook

Answer: A

Explanation:

In Ansible, the inventory defines the list of managed nodes (hosts) and groups of hosts. It is the source from which Ansible knows what systems to configure or manage.
