312-38 Valid Exam Fee, Valid 312-38 Study Guide

All questions in our 312-38 pass guide are at here to help you prepare for the certification exam. We have developed our learning

materials with accurate 312-38 exam answers and detailed explanations to ensure you pass test in your first try. Our PDF files are printable that you can share your 312-38 free demo with your friends and classmates. You can practice 312-38 real questions and review our study guide anywhere and anytime.

The EC-Council Certified Network Defender (CND) certification is a popular IT security certification that is designed to validate an individual's skills and knowledge in network security. EC-Council Certified Network Defender CND certification is offered by the International Council of E-Commerce Consultants (EC-Council), which is a globally recognized organization that provides certifications in various fields of IT security. The EC-Council CND certification exam is aimed at individuals who want to demonstrate their expertise in network security and protect their organizations from cyber threats.

EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q513-Q518):

NEW QUESTION # 513

Which of the following includes examining the probability, impact status, and exposure of risk?

- **A. Risk Assessment**
- B. Risk Tracking
- C. Risk Review
- D. Risk Identification

Answer: A

Explanation:

Risk assessment is a fundamental process in network security that involves evaluating the potential risks that could affect a system or organization. This process includes examining the probability of occurrence for various threats, the impact that these threats could have if they were to occur, and the exposure level of the organization's assets to these threats. By assessing these factors, an organization can prioritize risks and apply appropriate controls to mitigate them. The Certified Network Defender (CND) program emphasizes the importance of risk assessment in the overall risk management strategy, which is essential for protecting network infrastructure.

References: The Certified Network Defender (CND) course materials and study guide provide detailed information on risk assessment as part of the broader topic of risk management. This includes methodologies for assessing risk probability, impact, and exposure, which are critical for network defenders in identifying and responding to potential security threats¹.

NEW QUESTION # 514

James was inspecting ARP packets in his organization's network traffic with the help of Wireshark. He is checking the volume of traffic containing ARP requests as well as the source IP address from which they are originating. Which type of attack is James analyzing?

- A. ARP Sweep
- B. ARP misconfiguration
- **C. ARP Poisoning**
- D. ARP spoofing

Answer: C

Explanation:

James is analyzing an ARP Poisoning attack. This type of attack occurs when an attacker sends falsified ARP (Address Resolution Protocol) messages over a local area network. This results in the linking of an attacker's MAC address with the IP address of a legitimate computer or server on the network. Once the attacker has inserted their MAC address into the ARP cache of other devices, they can intercept, modify, or stop data in transit, effectively performing a man-in-the-middle or denial of service attack.

NEW QUESTION # 515

Which of the following statements are true about volatile memory? Each correct answer represents a complete solution. Choose all that apply.

- **A. A volatile storage device is faster in reading and writing data.**
- **B. It is computer memory that requires power to maintain the stored information.**
- C. Read only memory (ROM) is an example of volatile memory.

- D. The content is stored permanently and even the power supply is switched off.

Answer: A,B

Explanation:

Volatile memory, also known as volatile storage, is computer memory that requires power to maintain the stored information, unlike non-volatile memory which does not require a maintained power supply. It has been less popularly known as temporary memory. Most forms of modern random access memory (RAM) are volatile storage, including dynamic random access memory (DRAM) and static random access memory (SRAM). A volatile storage device is faster in reading and writing data. Answer options A and C are incorrect. Non-volatile memory, nonvolatile memory, NVM, or nonvolatile storage, in the most basic sense, is computer memory that can retain the stored information even when not powered. Examples of non-volatile memory include read-only memory, flash memory, most types of magnetic computer storage devices (e.g. hard disks, floppy disks, and magnetic tape), optical discs, and early computer storage methods such as paper tape and punched cards.

NEW QUESTION # 516

Which of the following organizations is responsible for managing the assignment of domain names and IP addresses?

- A. ANSI
- **B. ICANN**
- C. W3C
- D. ISO

Answer: B

NEW QUESTION # 517

Which of the following is a computer networking protocol used by hosts to retrieve IP address assignments and other configuration information?

- A. ARP
- B. SNMP
- **C. DHCP**
- D. Telnet

Answer: C

NEW QUESTION # 518
