Sustainable Investing Certificate (CFA-SIC) Exam passleader free questions & Sustainable-Investing valid practice dumps

Nowadays, it is hard to find a desirable job. A lot of people are forced to live their jobs because of lack of skills. So you must learn something in order to be washed out by the technology. Then our Sustainable-Investing study materials totally accord with your demands. With the latest information and knowledge in our Sustainable-Investing Exam Braindumps, we help numerous of our customers get better job or career with their dreaming Sustainable-Investing certification.

CFA Institute Sustainable Investing Certificate (CFA-SIC) Exam Sample Questions (Q680-Q685):

NEW QUESTION # 680

A company's emission reduction commitments are best evaluated using:

- A. Scope 3 emissions.
- B. science-based targets.
- C. financial modelling of material environmental factors.

Answer: B

Explanation:

Evaluating Emission Reduction Commitments:

A company's emission reduction commitments can be evaluated using various methods, but science-based targets provide the most robust framework for assessing these commitments.

1. Scope 3 Emissions: Scope 3 emissions include all indirect emissions that occur in a company's value chain, such as emissions from purchased goods and services, business travel, and waste disposal. While important, focusing solely on Scope 3 emissions does not provide a complete picture of a company's overall emission reduction strategy.
2. Science-Based Targets: Science-based targets (SBTs) are emission reduction targets that are aligned with the level of decarbonization required to meet the goals of the Paris Agreement, which aims to limit global warming to well below 2 degrees Celsius above pre-industrial levels. SBTs provide a clear and scientifically validated pathway for companies to reduce their greenhouse gas emissions in line with global climate goals.
3. Financial Modelling of Material Environmental Factors: Financial modelling of material environmental factors can provide insights into the financial impacts of environmental risks and opportunities. However, it is not as directly linked to evaluating the specific commitments and pathways for emission reduction as science-based targets are.

Reference from CFA ESG Investing:

Science-Based Targets: The CFA Institute highlights the importance of science-based targets in providing a credible and transparent framework for companies to set and achieve their emission reduction commitments. SBTs ensure that companies' goals are aligned with global climate science and policy objectives.

Emission Reduction Strategies: Understanding and evaluating emission reduction strategies through the lens of science-based targets allows investors to assess the credibility and effectiveness of a company's commitments.

In conclusion, a company's emission reduction commitments are best evaluated using science-based targets, making option B the verified answer.

NEW QUESTION # 681

Which of the following is an example of a stranded asset?

- A. A technology company that loses market share to a competitor
- B. A stock that experiences a short-term price decline
- C. A coal power plant forced to close due to new carbon regulations

Answer: C

Explanation:

A coal power plant forced to close due to carbon regulations is a stranded asset, as it loses economic value due to regulatory, environmental, or market changes.

* A tech company losing market share (B) is a business risk, not asset stranding.

* Short-term stock price declines (C) are normal market fluctuations.

NEW QUESTION # 682

In addition to an audit committee, almost all major companies have:

- A. nomination and remuneration committees.
- B. sustainability and risk committees.
- C. remuneration and risk committees.

Answer: A

Explanation:

Most companies, particularly those operating under strong corporate governance frameworks (e.g., UK Corporate Governance Code), are expected to maintain three principal board committees: audit, nomination, and remuneration. These committees serve critical governance functions—financial oversight, board composition, and executive pay.

"Expectations and duties of the three principal board committees that almost all major companies have in place: the audit committee... the nominations committee... and the remuneration committee." While sustainability or risk committees may exist in some firms, they are not as universally established as the three mentioned above.

NEW QUESTION # 683

Which of the following statements about the decoupling of economic activities from resource usage is most accurate?

- A. The Jevons paradox explains why decoupling happens
- **B. Moving to a circular economy boosts decoupling**
- C. Absolute long-term decoupling is more common than relative decoupling

Answer: B

Explanation:

Decoupling refers to the ability of an economy to grow without corresponding increases in environmental pressure. There are two types of decoupling:

Relative decoupling: Resource use grows at a slower rate than economic growth.

Absolute decoupling: Resource use declines while the economy grows.

Moving to a circular economy is a key strategy to enhance decoupling, as it focuses on reusing, recycling, and minimizing waste, thereby reducing the consumption of virgin resources and environmental impact. This approach helps in achieving relative and, in some cases, absolute decoupling.

While the Jevons paradox describes a scenario where increased efficiency leads to increased resource consumption, it does not explain decoupling. Additionally, absolute long-term decoupling is rare compared to relative decoupling, making option A the most accurate statement.

NEW QUESTION # 684

In response to policy changes, several of the world's largest automakers made pledges to halt producing cars with internal combustion engines by 2035. Which of the following would an asset manager most appropriately use to address this trend?

- A. Factor risk asset allocation model
- B. Liability-driven asset allocation model
- **C. Regime switching asset allocation model**

Answer: C

Explanation:

The regime switching asset allocation model is most appropriate for addressing the trend of major automakers pledging to halt the production of internal combustion engine cars by 2035. This model allows asset managers to adapt to different market regimes, which is crucial given the significant shift in the automotive industry due to policy changes and the transition to electric vehicles. The ability to switch between different allocation strategies based on prevailing economic and market conditions helps manage risks and capitalize on emerging opportunities related to the automotive industry's transformation.

NEW QUESTION # 685

.....

If candidates need to buy the Sustainable-Investing exam dumps for the exam, they must care for the pass rate. The pass rate of our Sustainable-Investing exam dumps is over 98 , and we can ensure that you can pass it. If you have some questions about the Sustainable-Investing Exam Materials, you can consult us. Furthermore, we have the technicians for our website, and they will check network environment safety at times, we offer you a clean and safety online network environment for you.
