EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q22-Q27):

NEW QUESTION # 22
Question:
A customer uses FCIP to connect local and remote FC SANs. The remote SAN is replicated to and used to store daily backup data. Latency over the IP WAN increases to unacceptable levels during peak replication periods. No other data transfer services using the WAN experience the same latency problem.
What is the likely cause of the data replication performance issue?

- A. Ethernet frame segmentation
- B. FCIP gateway FC ports set to EX_Port mode
- C. IP packet segmentation
- D. FCIP gateway FC ports set to TE_Port mode

Answer: C

Explanation:
IP packet segmentationcan cause replication performance issues over the WAN.
Since FCIP tunnels FC frames over IP networks, if the IP packet size exceeds the MTU, packets are fragmented and reassembled, increasing latency.
* TE_Port modeis used for trunking, not related to packet fragmentation.
* EX_Port modeis used for inter-switch connectivity (FCR).
* Ethernet frame segmentationis not relevant in FCIP tunneling.

NEW QUESTION # 23

Question:
What is the main advantage of Network Attached Storage (NAS) systems over general-purpose servers?

- A. Reduces the size of the object ID
- B. Supports FC protocols to access files over FC-SAN
- C. Increases data transfer speed
- D. Centralizes and optimizes file sharing operations

Answer: D

Explanation:
NAS systemsare purpose-built to handle file sharing and provide:
* Centralized file accessfor multiple clients.
* Optimized file sharingthrough dedicated hardware and software.
* Efficient managementwith file-level protocols (NFS, CIFS/SMB).
* FC protocols(Option B) are for block storage, not NAS.
* Object ID(Option C) relates to object storage, not NAS.
* Speed (Option D): While NAS can offer good speed, its main advantage is shared file access.

NEW QUESTION # 24

Question:
A company is looking for a continuous data protection solution that can provide any point-in-time recovery.
Which Dell solution is most suitable for this requirement?

- A. Dell RecoverPoint
- B. Dell SRDF
- C. Dell TimeFinder SnapVX
- D. Dell Cloud Tier

Answer: A

Explanation:
Dell RecoverPoint is a continuous data protection (CDP) solution that uses journaling to provideany point-in- time recoveryof data.
It continuously captures and replicates data changes, storing them in a journal to enable precise recovery to any required point in the past.
* Dell SRDF (Symmetrix Remote Data Facility):Provides synchronous/asynchronous replication, not CDP.
* Dell TimeFinder SnapVX:Creates point-in-time snapshots but doesn't offer continuous journaling.
* Dell Cloud Tier:Used for archiving older data to the cloud.
Reference:Dell Information Storage and Management Foundations 2023 Study Guide, Section: Replication and CDP.

NEW QUESTION # 25

Question:
A company is experiencing a sudden surge in website traffic due to a successful marketing campaign. The company's IT infrastructure is struggling to cope with the increased demand, and the website is slowing down.

Which cloud computing characteristic would be beneficial in this situation?

- A. On-demand self-service
- B. Resource pooling
- C. Measured service
- D. Rapid elasticity

Answer: D

Explanation:
Rapid elasticity is a cloud computing characteristic that allows resources to be scaled up or down quickly and automatically, depending on demand. In the scenario of a sudden traffic surge, rapid elasticity enables the infrastructure to handle increased loads without manual intervention.
* Measured service:Refers to monitoring and billing based on resource usage.
* On-demand self-service:Allows users to provision resources as needed.
* Resource pooling:Involves sharing resources among multiple users.
Reference:Dell Information Storage and Management Foundations 2023 Study Guide, Section: Cloud Characteristics.

NEW QUESTION # 26
Question:
What is the most common technique used by malware protection software to detect malware?

- A. Heuristic analysis
- B. Reputation-based analysis
- C. Behavioral analysis
- D. Signature-based detection

Answer: D

Explanation:
Signature-based detectionis the most common method of malware detection. It works by comparing files and data to a database of known malware signatures:
Fast and efficient for known threats.
Updated regularly by security vendors.
* Reputation-based:Looks at the trustworthiness of files/domains.
* Behavioral:Monitors actions and identifies suspicious patterns.
* Heuristic:Detects new malware based on file behaviors and patterns, useful for unknown threats.
