Updated Appian ACD201 Testkings | ACD201 Guide

Living in such a world where competitiveness is a necessity that can distinguish you from others, every one of us is trying our best to improve ourselves in every way. It has been widely recognized that the ACD201 exam can better equip us with a newly gained personal skill, which is crucial to individual self-improvement in today's computer era. With the certified advantage admitted by the test ACD201 Certification, you will have the competitive edge to get a favorable job in the global market. Here our ACD201 exam braindumps are tailor-designed for you.

Appian Senior Developer Sample Questions (Q78-Q83):

NEW QUESTION # 78

You need to create a quality control (QC) review process for a factory that allows a QC technician to review each production line regularly.

You have the following requirements:

- * Each technician has 45 minutes to complete their review.
 - * After 45 minutes, the review will expire.
 - * Expired reviews are flagged as 'Review expired.'
 - * 'Review expired' flags trigger an email notification to a supervisor, and the review data should not be saved.
 - * The technician can save a Draft copy of their review before submission and can come back to work on it later if necessary.
 - * Once a review is 'Submitted,' the review data is saved to the database. What should you implement?
- A. A send message event which sends an email after 45 minutes to the supervisor
 - **B. An exception timer that skips the OC review task after 45 minutes, which flows to a Send Email node configured to notify a supervisor.**
 - C. An escalation that sends an email after 45 minutes to the supervisor

Answer: B

NEW QUESTION # 79

An energy company wants to allow the public to be able to report power outages directly and provide supporting documentation in the form of photos and/or videos. The company also requires the reporter's contact details.

How can a developer design and implement this requirement in Appian?

- A. A site where the user can trigger a process that captures the information including any uploaded files, and uploads everything to an internal Microsoft SharePoint site.
- **B. A portal that interacts with records that stores the name, address, contact information, with a defined folder to store uploaded documents.**
- C. A custom version of the Appian mobile app that the user can use to capture details, attached photos, and upload documents.

Answer: B

NEW QUESTION # 80

The synced record Task has a self-referential relationship defined in the column parentTaskId. There is a many-to-one record relationship between the id and parentTaskId called parentTask.

For a given task ID, you need to return the task name and the parent task name.

What should you do?

- A. Use a!queryRecordType() filtered on the task id once to return the task name and parent task ID. Query the record again to return the parent task name.
- **B. Use a!queryRecordType() with a filter on the task id, with fields specified to return recordType!Task.name and recordType!Task.parentTask.name.**
- C. Create a sync-time custom record field on the Task record called parentName. Specify this field to return in the query field selection.

Answer: B

Explanation:

Using a!queryRecordType() with a filter on the task ID and specifying both recordType!Task.name and recordType!Task.parentTask.name in the fields will efficiently return both the task name and its parent task name in a single query.

NEW QUESTION # 81

You're designing a custom component rule!pagingComponent() to page through a list of items. The component must display the current page numbers being shown, as well as the total number of items. Users should be able to click arrows to increase or decrease the pagination.

Review the following:

□ Which two patterns should be used when calling the component in this scenario? (Choose two.)

- A. A rule input `ri!pagingInfo` on `rule!pagingComponent()` with a local variable of the same name in the main interface with an initial value. When the arrows are clicked, this updates the value of the local variable in the main interface.
- B. A local variable `local!pagingInfo` inside `rule!pagingComponent()` with an initial value. When the arrows are clicked, this updates the value of the local variable.
- C. Passing into the rule input `totalCount` of `rule!pagingComponent()` the value: `local!query.totalCount` where `local!query` is returning a `dataSubset` and `returnTotalCount = "True"`.
- D. A local variable `local!totalCount` calculated using `count(local!query)`, which is passed into `rule!pagingComponent()` via a rule input. The data type of `local!query` is a list of record or Custom Data Type (CDT).

Answer: A,C

Explanation:

Passing `local!query.totalCount` (from a `dataSubset` with `returnTotalCount: true`) into a rule input allows `rule!pagingComponent()` to accurately display total items for pagination.

Managing paging state (such as `ri!pagingInfo`) as a local variable in the main interface and updating it when arrows are clicked ensures that pagination is controlled centrally, maintaining state across the UI and allowing the component to function as intended.

NEW QUESTION # 82

You're the administrator of your insurance company's case management system. You need to limit insurance agents to only those clients to which they have been assigned.

Which two statements must be true for one way to configure Record-Level security for the Customer record?
(Choose two.)

- A. A new record-level security rule should be created using the `Users found in fields` option to specify that if a user is found in the `"assignedAgent"` field (which is a type `User`), then they can see their cases.
- B. A condition should be added to the record-level security rule to specify which cases specifically named agents can access.
- C. Data sync should be enabled.
- D. Record-level security means agents must have permission to view the record type and permission to edit the records.

Answer: A,B

Explanation:

Creating a record-level security rule using the `"Users found in fields"` option ensures agents only see records assigned to them through the `"assignedAgent"` field.

Adding a condition to the rule further refines which records (cases) each agent can access, implementing precise record-level security.

NEW QUESTION # 83

.....

It is because of our high quality Appian ACD201 preparation software, PDF files and other relevant products, we have gathered thousands of customers who have successfully passed the Appian ACD201 in one go. You can also attain the same success rate by using our high standard ACD201 Preparation products. Thousands of satisfied customers can't be wrong. You must try our products to believe this fact.
