

Reliable CCSFP Test Bootcamp - Simulation CCSFP Questions

Question 4 of 20
Bootcamp.com
Tutored, Untimed

Patient	After replacement of the rubber dam, each of the following is an appropriate reason to repeat the etching step EXCEPT one? Which is the EXCEPTION? <ul style="list-style-type: none"> <input checked="" type="radio"/> A. Increase microchemical retention (44%) <input type="radio"/> B. Removal of bacterial contamination (13%) <input type="radio"/> C. Removal of salivary proteins (10%) <input type="radio"/> D. Increase resin tag depth (33%)
Male, 34 years old	
Chief Complaint	
"I'm here to get this cavity fixed."	
Background and/or Patient History	
Anxiety Depression	Tooth 5 mesial caries planned for a slot preparation and composite restoration
Current Findings	Tooth 5 cavity preparation under rubber dam isolation completed, acid etchant applied A tear in the rubber dam occurs on the interproximal area of teeth 5 and 6.

Incorrect 44% 00:04 4/20/...

Correct... Answered... Time Spent Last...

Proper isolation for composite resin restorations is critical to ensure maximal bond strength. Composite restoration placement is technique-sensitive, and saliva contamination is one of the biggest culprits in decreasing these restorations' longevity.

When enamel and dentin are etched, micromechanical irregularities are formed which allow for interlocking with the resin. This results in micromechanical retention, not

The online version uses the onlin tool, it support all web browsers, and it's convenient and easy to learn it also provide the text history and performance review, this version is online and you can practice it in your free time. The desktop version stimulate the real exam environment, it will make the exam more easier.

HITRUST Certified CSF Practitioner 2025 Exam Sample Questions (Q107-Q112):

NEW QUESTION # 107

Using only the information from the chart and question below, please answer:
This assessment will be able to achieve certification. [0192]

- A. True
- B. False

Answer: B

Explanation:

Certification requires all Requirement Statements to meet the 62.5% threshold.

From the chart:

"The Privacy Officer..." scored 42, below 62.5.

"Antivirus clients have..." scored 62, also below 62.5.

Because there are Requirement Statements below threshold, the assessment will contain Required CAPs, and certification cannot be awarded until remediation.

Extract Reference (HITRUST CSF Scoring Methodology [0192]):

Certification requires all Requirement Statements to meet the minimum scoring threshold; scores below 62.5 prevent certification.

NEW QUESTION # 108

A control that is not documented cannot be measured. [0126]

- A. True
- B. False

Answer: A

Explanation:

For the Measured domain, evidence must exist that controls are being evaluated for effectiveness.

Without documentation, a control cannot be measured, as there is no evidence of monitoring or review activity.

Documentation is the basis for determining repeatability, maturity, and strength in the scoring model.

Extract Reference (HITRUST Scoring Methodology [0126]):

If a control is undocumented, it cannot be evaluated in the Measured domain, as measurement requires documentation of monitoring.

NEW QUESTION # 109

Which of the following is NOT one of the Technical risk factors?

- A. Number of Facilities
- B. Accessible from the Internet
- C. Number of Transactions
- D. Number of Users

Answer: A

Explanation:

Technical risk factors in HITRUST scoping include elements that influence the size and complexity of the IT environment. Examples are Number of Users (reflecting identity management challenges), Number of Transactions (indicating workload and exposure volume), and Accessible from the Internet (highlighting attack surface considerations). These factors affect how many requirement statements are assigned and the level of implementation required. However, Number of Facilities is not considered a technical factor. Instead, facilities are categorized under Organizational or Operational risk factors, since they represent physical locations and operational complexity rather than technical characteristics. This distinction ensures risk tailoring addresses both IT-centric and business-environment dimensions separately.

HITRUST CSF Methodology - "Risk Factor Categories and Examples"; CCSFP Study Guide - "Scoping with Technical vs. Organizational Factors."

NEW QUESTION # 110

The HITRUST CSF applies to covered information in all forms (words, numbers, pictures, sounds).

- A. True
- B. False

Answer: A

Explanation:

The HITRUST CSF is designed to protect all forms of sensitive information, not just structured digital data.

This includes words (text documents, records), numbers (financial data, identifiers), pictures (images, radiology scans, photographs), and sounds (voice recordings, call center data). The comprehensive scope ensures that entities consider every medium in which sensitive information may exist, whether electronic, physical, or spoken. This aligns with regulatory definitions, such as HIPAA, which recognizes both electronic and non-electronic forms of protected health information. By covering all forms, HITRUST ensures organizations apply consistent safeguards across their environments and do not overlook exposures outside IT systems, such as printed reports or recorded conversations.

NEW QUESTION # 111

Which version of the CSF supports a traversable requirement statement portfolio?

- A. 0
- B. v9.2
- C. v9.6.1
- D. v9.4

Answer: A

NEW QUESTION # 112

.....
