High praised NCP-US-6.10 exam guide: Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 present you superb practice dumps - ITPassLeader

P.S. Free & New NCP-US-6.10 dumps are available on Google Drive shared by ITPassLeader: https://drive.google.com/open?id=1GdzSsHSt6-JqvyhSLFFqiU9p-egBXeJG

Our NCP-US-6.10 test training will provide you with a well-rounded service so that you will not lag behind and finish your daily task step by step. At the same time, our NCP-US-6.10 study torrent will also save your time and energy in well-targeted learning as we are going to make everything done in order that you can stay focused in learning our NCP-US-6.10 Study Materials without worries behind. We are so honored and pleased to be able to read our detailed introduction and we will try our best to enable you a better understanding of our NCP-US-6.10 test training better.

The Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 can advance your professional standing. Passing the Nutanix NCP-US-6.10 exam is the requirement to become Nutanix Professionals and to get your name included. Practicing with Nutanix NCP-US-6.10 Dumps is considered the best strategy to test the exam readiness. After passing the NCP-US-6.10 exam you will become a valuable asset for the company you work for or want to work. You don't need to sacrifice your job hours or travel to distant training institutes for exam preparation when you have Nutanix NCP-US-6.10 Dumps for instant success. These NCP-US-6.10 dumps questions with authentic answers are compiled by Nutanix professionals and follow the actual exam's questioning style.

Pdf NCP-US-6.10 Braindumps, NCP-US-6.10 Authentic Exam Questions

No matter what your current status is NCP-US-6.10 exam questions can save you the most time, and then pass the NCP-US-6.10 exam while still having your own life time. If you free dwonload the demo of our NCP-US-6.10 exam questions, I believe you will have a deeper understanding of our products, and we must also trust our NCP-US-6.10 learning quiz. Our products can provide you with the high efficiency and high quality you need. What are you waiting for? Quickly use our study NCP-US-6.10 materials!

Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 Sample Questions (Q83-Q88):

NEW QUESTION # 83
Question:
What is the default cold data threshold within the File Analytics Data Age widget?

- A. Last accessed longer than four weeks ago
- B. Last accessed within the last two to four weeks
- C. Last accessed within the last week
- D. Last accessed within the last one to two weeks

Answer: A

Explanation:
In Nutanix Files,File Analyticsprovides insights into how files are used over time to help with capacity planning and data lifecycle management. TheData Age widgetspecifically identifiescold data, which typically includes older, less frequently accessed files. Thedefault cold data thresholdis:
"Files that have not been accessed forlonger than four weeksare considered cold data." This is aligned with best practices for identifying data that can be tiered to cheaper storage or archived to maintain performance and reduce costs.
The NUSA course materials emphasize:
"The default threshold for cold data classification in File Analytics isfour weeks. Administrators can customize this threshold to meet business or regulatory requirements." Thus,files not accessed for over four weeksare flagged ascoldby default in the Data Age widget.

NEW QUESTION # 84
How many IP addresses are required by the client network when deploying Nutanix Files?

- A. The same number of IP addresses as the number of FSVM nodes
- B. One less IP address as the number of FSVMs
- C. One additional IP address as the number of FSVMs
- D. Twice as many IP addresses as the number of FSVMs

Answer: C

Explanation:
When deploying Nutanix Files, the client network requiresone additional IP address than the number of File Server Virtual Machines (FSVMs). Nutanix Files uses a distributed architecture where each FSVM handles file services for clients via protocols like SMB or NFS. The client network is used for client-facing traffic, and it requires one IP address per FSVM plus an additional virtual IP address (VIP) that serves as the primary access point for clients.
According to theNutanix Unified Storage Administration (NUSA)course, "Nutanix Files requires one IP address per FSVM on the client network for client communication, plus one additional VIP that provides a unified endpoint for accessing file shares." The VIP is load-balanced across the FSVMs, ensuring high availability and seamless client access even if an FSVM fails.
TheNutanix Certified Professional - Unified Storage (NCP-US)study guide further clarifies that "the client network for Nutanix Files must be configured with one IP address for each FSVM and an additional VIP, resulting in a total of N+1 IP addresses, where N is the number of FSVMs." For example, a deployment with three FSVMs requires four IP addresses: three for the FSVMs and one for the VIP.
The other options are incorrect:
* The same number of IP addresses as the number of FSVM nodes: This does not account for the additional VIP required for client access, which is essential for load balancing and failover.
* One less IP address as the number of FSVMs: This is not feasible, as each FSVM requires its own IP address, and the VIP adds an additional requirement.
* Twice as many IP addresses as the number of FSVMs: This overestimates the IP address needs, as only one additional VIP is required, not double the number of FSVMs.
The NUSA course documentation emphasizes that "the client network VIP simplifies client access to Nutanix Files by providing a single IP address that abstracts the underlying FSVMs, requiring one additional IP address beyond the FSVM count." References: Nutanix Unified Storage Administration (NUSA) Course, Section on Nutanix Files: "Network configuration for client access and VIP setup." Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Topic 1: Deploy and Upgrade Nutanix Unified Storage, Subtopic: "Nutanix Files client network IP address requirements." Nutanix Documentation (https://www.nutanix.com), Nutanix Files Administration Guide: "Client network configuration for Nutanix Files."

NEW QUESTION # 85
What prerequisite must be met before a Nutanix Files SMB share can be used?

- A. Register the cluster with Prism Central.
- B. Enable a strong password policy.
- C. Run afs infra.start
- D. Configure directory services.

Answer: D

Explanation:
Directory services integration (e.g., Active Directory) is mandatory for SMB shares to:

* Authenticate users.
* Apply access controls (ACLs).
* Enable Kerberos-based security. Without this, SMB shares cannot be accessed by domain-joined clients.
* Option B: Prism Central registration enables central management but isn't a share prerequisite.
* Option C: afs infra.start is an invalid command.
* Option D: Password policies are enforced via directory services but not a standalone prerequisite.
Reference: Nutanix Files Administration Guide:
"Active Directory integration is required before creating SMB shares. File Server VMs must be domain-joined for user authentication."(Chapter: "Configuring SMB Shares") Nutanix Unified Storage Administration (NUSA) Course:
"Directory services configuration is the foundational step for SMB share deployment."(Module: "Nutanix Files SMB Implementation")

NEW QUESTION # 86
An administrator needs to configure a bare-metal server to boot from a Nutanix Volumes-hosted virtual disk.
Which volume-group configuration option must be entered or selected for the client to boot over the network?

- A. Iscsi_max_recv_data_segment_length
- B. Enable external client access
- C. Use DHCP for iSCSI Target Information
- D. Enable Chap log on

Answer: C

Explanation:
The Nutanix Unified Storage Administration (NUSA) course, in the module "Configuring Volume Groups for External Clients," highlights that when configuring iSCSI boot for external (bare-metal) clients, the"Use DHCP for iSCSI Target Information"option must be enabled. This allows the iSCSI boot firmware (iBFT) to automatically discover the iSCSI target (Volume Group) using DHCP-provided parameters.
The course documentation states:
"Enabling 'Use DHCP for iSCSI Target Information' is essential for booting external clients from Nutanix Volumes using iSCSI. DHCP provides the iSCSI target IP and other relevant data for a successful boot." Reference:
Nutanix Unified Storage Administration (NUSA) course - Module: Configuring Volume Groups for External Clients.
Nutanix Unified Storage (NCP-US) Study Guide - Topic: iSCSI Boot with Nutanix Volumes.

NEW QUESTION # 87
After configuring Smart DR, an administrator observes that a policy in the Policies tab is not visible within Prism Central (PC).
What is the likely cause of this issue?

- A. Port 7515 is not opened between the source and recovery networks.
- B. The initial replication has not completed.
- C. The administrator is logged into PC with a local account rather than an AD account.
- D. The share permissions include more than one local user.

Answer: A

Explanation:
Smart DR requires port 7515 (TCP) for communication between source/target clusters and Prism Central. If blocked:
* Policies fail to synchronize with PC.
* Policies become "invisible" in the UI.
Other options are unrelated:
* A: Share permissions don't affect policy visibility.
* B: Initial replication progress appears in UI even if incomplete.
* C: AD/local login affects permissions, not policy discovery.
Reference: Nutanix Smart DR Administration Guide:
"Ensure port 7515 is open between Prism Central, source cluster, and target cluster. Blocking this port prevents policy metadata from appearing in PC."(Chapter: "Troubleshooting Smart DR") Nutanix Unified Storage (NCP-US) Study Material:
"Connectivity issues on port 7515 are the primary cause of missing Smart DR policies in Prism Central." (Section: "Smart DR Deployment Requirements")

NEW QUESTION # 88
