As we all know, sometimes the right choice can avoid the waste of time, getting twice the result with half the effort. Especially for MuleSoft-Integration-Associate preparation materials, only by finding the right ones can you reduce the pressure and help yourself to succeed. If you haven't found the right materials yet, please don't worry. Maybe our MuleSoft-Integration-Associate Practice Engine can give you a leg up which is our company's flagship product designed for the MuleSoft-Integration-Associate exam.

Although our MuleSoft-Integration-Associate exam braindumps have been recognised as a famous and popular brand in this field, but we still can be better by our efforts. In the future, our MuleSoft-Integration-Associate study materials will become the top selling products. Although we come across some technical questions of our MuleSoft-Integration-Associate learning guide during development process, we still never give up to developing our MuleSoft-Integration-Associate practice engine to be the best in every detail.

Exam Topics MuleSoft-Integration-Associate Pdf - Reliable MuleSoft-Integration-Associate Exam Dumps

Test4Sure offers a free demo of Salesforce Certified MuleSoft Integration Associate Exam (MuleSoft-Integration-Associate) exam dumps before the purchase to test the features of the products. Test4Sure also offers 1 year of free MuleSoft-Integration-Associate exam questions updates if the MuleSoft-Integration-Associate certification exam content changes after purchasing our MuleSoft-Integration-Associate Exam Dumps. It is possible to adjust the MuleSoft-Integration-Associate practice test difficulty levels according to your needs. You can choose the number of Salesforce MuleSoft-Integration-Associate questions and topics.

Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q35-Q40):

NEW QUESTION # 35

According to MuleSoft which principle is common to both Service Oriented Architecture (SOA) and API-First connectivity approaches*?

- A. Service statefulness
- B. Service centralization
- C. Service reusability
- D. Service interdependence

Answer: C

Explanation:

Both Service-Oriented Architecture (SOA) and API-led connectivity emphasize the principle of service reusability. Here's a detailed explanation:

* Service Reusability:

* Definition: Service reusability is the principle where services are designed to be reusable across different applications and use cases.

* SOA: In SOA, services are modular components that can be reused in various business processes, reducing redundancy and promoting efficient service composition.

* API-led Connectivity: This approach also stresses creating reusable APIs (System APIs, Process APIs, Experience APIs) that can be leveraged across multiple projects and applications.

* Benefits:

* Efficiency: Reduces development time and effort by reusing existing services.

* Consistency: Ensures consistency in business logic and data access across different applications.

* Scalability: Facilitates scaling by using standardized and reusable services/APIs.

References

* MuleSoft Documentation: SOA vs. API-led Connectivity

* Service Reusability: Principles of Service Reusability

NEW QUESTION # 36

An API client makes an HTTP request to an API gateway with an Accept header containing the value "application/json"

What is a valid HTTP response payload for this request in the client's requested data format?

- A. {"status": "healthy"}
- B. status('healthy')
- C. status: healthy
- D. <status>healthy</status>

Answer: A

Explanation:

When an API client makes an HTTP request with an Accept header containing the value "application/json", the API server should respond with a payload formatted as JSON. Here's a detailed explanation:

* Accept Header:

* Purpose: The Accept header indicates the media type(s) that the client is willing to receive from the server.

* Value "application/json": Specifies that the client expects a response in JSON format.

* Valid JSON Response:

* Format: JSON (JavaScript Object Notation) is a lightweight data interchange format that uses key-value pairs.

* Example: A valid JSON response for the requested format would be {"status": "healthy"}

* Key: "status"

* Value: "healthy"

References

* JSON Standard: JSON.org

* HTTP Headers:MDN HTTP Headers

NEW QUESTION # 37

Which component of AnypointPlatform belongs to the platform control plane?

- A. Runtime Replica
- B. API Manager
- C. Runtime Fabric
- D. Anypoint Connectors

Answer: B

Explanation:

In Anypoint Platform, the control plane is responsible for managing and controlling the various components and services that make up the platform. API Manager is part of the control plane, providing centralized management of APIs. Here's a detailed explanation:

* Control Plane:

* Definition: The control plane in Anypoint Platform is responsible for the management, monitoring, and control of APIs,

applications, and other platform resources.

* Components: Includes tools for API management, analytics, security, and governance.

* API Manager:

* Purpose: Allows users to manage API policies, monitor API usage, and secure APIs. It provides a centralized interface for managing the entire lifecycle of APIs.

* Features:

* Policy Enforcement: Apply security policies, rate limiting, and other governance rules.

* Analytics and Monitoring: Track API performance, usage statistics, and detect anomalies.

* Access Control: Manage user access and permissions for APIs.

References

* MuleSoft Documentation: API Manager

* Anypoint Platform Overview: Anypoint Platform

NEW QUESTION # 38

A system administrator needs to determine when permissions were last changed for an Anypoint Platform user.

Which Anypoint Platform component should the administrator use to obtain this information?

- A. Anypoint Studio
- B. **Audit Logging**
- C. Mule Stack Traces
- D. Anypoint Monitoring

Answer: B

Explanation:

Anypoint Platform provides various tools and components for managing and monitoring the platform and its activities. To determine when permissions were last changed for an Anypoint Platform user, Audit Logging is the appropriate component to use. Here's a detailed explanation:

* Audit Logging:

* Purpose: Audit logs capture detailed records of user activities and changes within the Anypoint Platform, including permission changes.

* Access: Administrators can access audit logs through the Anypoint Platform's management console.

* Information Captured:

* User Actions: Logs include information about user logins, permission changes, API deployments, and other critical actions.

* Timestamp: Each log entry is timestamped, providing the exact time and date when the permissions were changed.

* Use Case:

* Monitoring and Security: Audit logs are crucial for monitoring platform activities, ensuring compliance, and investigating security incidents.

References

* MuleSoft Documentation: Anypoint Platform Audit Logging

NEW QUESTION # 39

An integration architect is designing an API that must accept requests from API clients for both XML and JSON content over HTTP/1.1 by default.

Which API architectural style when used for its intended and typical purposes, should the architect choose to meet these requirements?

- A. gRPC
- B. GraphQL
- C. **REST**
- D. SOAP

Answer: C

Explanation:

REST (Representational State Transfer) is an architectural style commonly used for designing networked applications, particularly APIs that need to handle multiple content types over HTTP. Here's a detailed explanation:

* Content Negotiation:

* Definition: REST APIs support content negotiation, allowing clients to request either XML or JSON formats by setting

theAccept header in HTTP requests.

* Flexibility: This capability makes REST ideal for scenarios where an API needs to serve multiple content types.

* HTTP Protocol:

* Usage: REST APIs operate over HTTP/1.1, making them compatible with web standards and easily accessible by various clients (browsers, mobile apps, etc.).

* Methods: Supports standard HTTP methods like GET, POST, PUT, DELETE, allowing for CRUD operations.

* Advantages:

* Stateless: Each request from a client to server must contain all the information needed to understand and process the request.

* Scalability: RESTful services can handle a high load of requests efficiently.

References

* REST API Design: RESTful Web Services

* Content Negotiation: HTTP Content Negotiation
