

Trust the best-selling 1z0-076 Cert Guide Reliable Exam Papers

2026 Latest ValidTorrent 1z0-076 PDF Dumps and 1z0-076 Exam Engine Free Share: https://drive.google.com/open?id=13Ts_0QbYtlUqYazvJAlhqqzLPGm_th8vK

After using our 1z0-076 learning materials, you will find that things that have been difficult before have become simple. Of course, that's because you are better. Opportunities are for those who are prepared. And our 1z0-076 exam questions are the right tool to help you get prepared. With the most up-to-date knowledge and information of the 1z0-076 Practice Braindumps, you can be capable to deal with all of the conditions in your job. Believe it, good people will be better!

The 1z0-076 learning dumps from our company are very convenient for all people, including the convenient buying process, the download way and the study process and so on. Upon completion of your payment, you will receive the email from us in several minutes, and then you will have the right to use the Oracle Database 19c: Data Guard Administration test guide from our company. In addition, there are three different versions for all people to choose. According to your actual situation, you can choose the suitable version from our 1z0-076 study question. We believe that the suitable version will help you improve your learning efficiency. It will be very easy for you to pass the exam and get the certification. More importantly, your will spend less time on preparing for 1z0-076 exam than other people.

>> Reliable 1z0-076 Exam Papers <<

Reliable 1z0-076 Exam Papers Exam 100% Pass | Test 1z0-076 Objectives Pdf

Our online version of 1z0-076 learning guide does not restrict the use of the device. You can use the computer or you can use the mobile phone. You can choose the device you feel convenient at any time. Once you have used our 1z0-076 exam training in a network environment, you no longer need an internet connection the next time you use it, and you can choose to use 1z0-076 Exam Training at your own right. Our 1z0-076 exam training do not limit the equipment, do not worry about the network, this will reduce you many learning obstacles, as long as you want to use 1z0-076 test guide, you can enter the learning state.

Oracle Database 19c: Data Guard Administration Sample Questions (Q42-Q47):

NEW QUESTION # 42

Which two statements are true regarding Data Guard environments in an Oracle Multi-tenant architecture?

- A. The Data Guard broker may be used for multi-tenant databases.
- B. PDB_FILE_NAME_CONVERT must be set to enable creation of standby databases if they are created on the same host as the primary.
- C. Standby redo log files are required for each pluggable database that is protected with Data Guard.
- D. Different redo transport methods can be configured for different pluggable databases within one Data Guard environment.
- E. A Data Guard environment with a multi-tenant primary database can operate in any Protection mode.

Answer: A,E

Explanation:

Oracle Multi-tenant architecture and Data Guard have several interactions, but specific aspects hold true in such environments:

* The Data Guard broker may be used for multi-tenant databases (B): Data Guard Broker simplifies the management and monitoring of Data Guard configurations and is fully compatible with the Oracle Multi-tenant architecture, allowing for easy management of Data Guard configurations that include multi-tenant container databases (CDBs) and their pluggable databases (PDBs).

* A Data Guard environment with a multi-tenant primary database can operate in any Protection mode (E): Data Guard can be configured to operate in Maximum Performance, Maximum Availability, or Maximum Protection mode, regardless of whether the primary database is a multi-tenant database.

This flexibility ensures that Data Guard can meet various data protection and availability requirements in multi-tenant environments.

NEW QUESTION # 43

Which TWO are TRUE about offloading backups to a physical standby database in a Data Guard environment?

- A. The standby database must be registered in an RMAN catalog before the primary database has been registered.
- B. The standby database must be registered in an RMAN catalog after the primary database has been registered.
- C. Backups of the standby control file taken while connected to the catalog where the database is registered, may be used to restore the control file on the primary database.
- D. The standby database can not be registered in an RMAN catalog if the primary database has not been registered.

Answer: B,C

Explanation:

In a Data Guard environment, offloading backups to a physical standby database has certain requirements:

A: Once the primary database is registered in an RMAN catalog, the standby database can also be registered. This allows RMAN to manage backups coherently across both databases and leverage the standby database for backup purposes without interfering with the primary database's workload.

C: Backups of the standby control file taken while connected to the catalog where the database is registered can be used to restore the control file on the primary database. This ensures that backup metadata is consistent across the Data Guard configuration.

Options B and D are incorrect because there is no strict requirement for the order in which the primary and standby databases must be registered in an RMAN catalog. However, it is a common practice to register the primary database first.

NEW QUESTION # 44

Your Data Guard environment contains a primary database and three standby databases with these attributes:

1. prod : Primary database
2. prod_prq : Physical standby database with real-time query enabled used by reporting applications
3. prod_lsb : Logical standby database used by DSS
4. PROD_SSBY: Snapshot standby database used for Real Application Testing

Which TWO can be used to prevent clients from connecting to the wrong database instance?

- A. Establish Oracle Net connectivity to the primary database instance from all the standby database instances.
- B. Create a static service for each of the databases, register it with the local listener of each database instance, and add connection descriptors on clients to connect to those services.
- C. Create role based services with the `sqlnet.ora` utility when using clusterware for Oracle RAC databases or Oracle Restart for single instance Oracle databases.
- D. Create database services for each database and use event triggers to make sure that services are activated only when the database is in the correct role.
- E. Create database services on each of the standby databases, start the services, and add connection descriptors on the clients to connect to those services.

Answer: D,E

Explanation:

Creating dedicated database services for each database instance (Option D) and utilizing event triggers to manage these services based on the role of the database (Option E) ensure that clients connect to the appropriate database instance based on its current role and state. This approach leverages the flexibility and control provided by Oracle Net services and database event management to direct client connections to the suitable primary or standby instance, enhancing the overall robustness and reliability of the Data Guard environment.

Guard environment. Reference: Based on Oracle Database 19c best practices for managing connectivity and services in a Data Guard setup, including the use of role-based services and event-driven service management.

NEW QUESTION # 45

Which TWO statements are true about database parameters for databases in a Data Guard environment?

- A. DB_FILE_NAME_CONVERT is only required if the standby database is on the same host as the primary database.
- B. COMPATIBLE must have identical values for primary and standby databases.
- C. LOG_FILE_NAME_CONVERT applies to online redo logs and archived logs.
- D. If DB_RECOVERY_FILE_DEST is specified, then LOG_ARCHIVE_DEST_n is not required for local archive logs.
- E. The databases that are part of a Data Guard configuration must have different DB_UNIQUE_NAME initialization parameters.

Answer: B,E

NEW QUESTION # 46

Examine this list of possible steps:

1. Raise the compatibility level on both databases.
2. Restart SQL Apply on the upgraded logical standby database.
3. Start SQL Apply on the old primary database.
4. Perform a Switchover to the logical standby database.
5. Upgrade the logical standby database.
6. Upgrade the old primary database.

Which is the minimum number of steps in the correct order, to perform a rolling release upgrade of a data guard environment using an existing logical standby database and to enable the new functionality?

- A. 1,5,2,4,6,3
- B. 5,2,4,1
- C. 4,6,5,2,3,1
- D. 5,2,4,6,3,1
- E. 5,2,4,3,6,1

Answer: A

Explanation:

The process of performing a rolling release upgrade in a Data Guard environment using a logical standby database generally involves these steps:

Raise the compatibility level on both databases (1): Ensuring both the primary and logical standby databases are operating with the same and correct compatibility level is essential before starting the upgrade process.

Upgrade the logical standby database (5): Apply the database upgrade to the logical standby first, which allows the primary database to continue serving the workload without interruption.

Restart SQL Apply on the upgraded logical standby database (2): Once the logical standby has been upgraded, SQL Apply must be restarted to apply the redo data from the primary database, which is still running the earlier version.

Perform a switchover to the logical standby database (4): After confirming that the logical standby database is successfully applying redo data, perform a switchover to make it the new primary database.

Upgrade the old primary database (6): With the new primary database now in place, upgrade the old primary database (which is now the new standby) to the new Oracle Database release.

Start SQL Apply on the old primary database (3): Finally, start SQL Apply on what is now the standby database to synchronize it with the new primary database.

NEW QUESTION # 47

.....

In the past few years, Oracle certification 1z0-076 exam has become an influenced computer skills certification exam. However,

how to pass Oracle certification 1z0-076 exam quickly and simply? Our ValidTorrent can always help you solve this problem quickly. In ValidTorrent we provide the 1z0-076 Certification Exam training tools to help you pass the exam successfully. The 1z0-076 certification exam training tools contains the latest studied materials of the exam supplied by IT experts.

Test 1z0-076 Objectives Pdf: <https://www.validtorrent.com/1z0-076-valid-exam-torrent.html>

Oracle Reliable 1z0-076 Exam Papers If a person is strong-willed, it is close at hand, Oracle Reliable 1z0-076 Exam Papers This version can also build up your confidence for the exam, And you will find that passing the 1z0-076 exam is as easy as pie, Besides, the 1z0-076 can simulate the actual test environment, you can practice the 1z0-076 exam questions & answers as you are at the real exam, which will help you to be familiar with the actual test in advance, We try our best to maximize the benefit of our customers and potential customers for 1z0-076 book torrent.

Each object contains some of the data of the system, and the program encapsulates that data, How to Pass 1z0-076 Exam using 1z0-076 Exam Dumps, If a person is strong-willed, it is close at hand.

Pass Guaranteed 2026 Authoritative 1z0-076: Reliable Oracle Database 19c: Data Guard Administration Exam Papers

This version can also build up your confidence for the exam, And you will find that passing the 1z0-076 exam is as easy as pie, Besides, the 1z0-076 can simulate the actual test environment, you can practice the 1z0-076 exam questions & answers as you are at the real exam, which will help you to be familiar with the actual test in advance.

We try our best to maximize the benefit of our customers and potential customers for 1z0-076 book torrent.
