C-SEC-2405 High Passing Score, Hottest C-SEC-2405 Certification

There are three different versions of our C-SEC-2405 study materials including PDF, App and PC version. Each version has the suitable place and device for customers to learn anytime, anywhere. In order to give you a basic understanding of our various versions, each version offers a free trial. The PDF version of C-SEC-2405 study materials supports download and printing, so its trial version also supports. You can learn about the usage and characteristics of our C-SEC-2405 Study Materials in various trial versions, so as to choose one of your favorite in formal purchase. In fact, all three versions contain the same questions and answers.

SAP Certified Associate - Security Administrator Sample Questions (Q66-Q71):

NEW QUESTION # 66

Which of the following functions within SAP GRC Access Control support access certification and review?

Note: There are 2 correct answers to this question.

- A. Role Review
- **B. SOD Review**
- C. Role Reaffirm
- **D. User Reaffirm**

Answer: B,D

Explanation:

In SAP GRC Access Control, the functions that support access certification and review are SOD Review and User Reaffirm. SOD (Segregation of Duties) Review enables organizations to analyze roles and user assignments for potential conflicts, ensuring that access does not violate SoD policies. This review process involves certifying that roles or users do not have conflicting permissions, supporting compliance with security standards. User Reaffirm is used to periodically certify user access, requiring managers or administrators to confirm that users' assigned roles and permissions remain appropriate for their job functions. This reaffirmation process is critical for access governance, ensuring ongoing compliance and security. Role Review, while related to role maintenance, is not a specific GRC function for access certification, and Role Reaffirm is not a standard term in SAP GRC. By leveraging SOD Review and User Reaffirm, SAP GRC Access Control provides robust tools for maintaining secure and compliant access management, addressing both role-based and user-based risks.

NEW QUESTION # 67

Which access categories are available to maintain restrictions in SAP S/4HANA Cloud Public Edition? Note:

There are 3 correct answers to this question.

- **A. Value Help (value help access)**
- B. Write, Read (write access)
- C. Write, Read, Value Help (write access)
- **D. Read, Value Help (read access)**
- **E. Read (read access)**

Answer: A,D,E

Explanation:

* Context: Access categories in SAP S/4HANA Cloud Public Edition define the type of restrictions applied to business users' data access.

* Solution Explanation:

* A: "Read" allows view-only access.

* C: "Read, Value Help" includes read access and field-level help for specific data.

* D: "Value Help" restricts access to value-help fields.

NEW QUESTION # 68

If you want to evaluate catalog menu entries and authorization default values of IWSG and IWSV applications, which SUIM reports would you use? Note: There are 2 correct answers to this question.

- A. By Transaction Assignment in Menu
- **B. Search Startable Applications in Roles**
- **C. By Authorization Object**
- D. Search Applications in Roles

Answer: B,C

Explanation:

To evaluate catalog menu entries and authorization default values for IWSG (SAP Gateway Service Groups Metadata) and IWSV (SAP Gateway Business Suite Enablement-Service) applications, the SUIM (System User Information System) reports "Search Startable Applications in Roles" and "By Authorization Object" are used. The "Search Startable Applications in Roles" report identifies roles that include startable applications, such as IWSG and IWSV, by analyzing menu entries in PFCG roles, providing insight into which applications users can access. The "By Authorization Object" report allows administrators to review authorization objects, including those associated with IWSG and IWSV, and their default values, ensuring that the correct permissions are assigned. These reports are critical for auditing and maintaining secure access to SAP Fiori and Gateway applications. The "Search Applications in Roles" report is less specific, and "By Transaction Assignment in Menu" focuses on transaction codes, not IWSG/IWSV applications, making them unsuitable for this purpose. These tools enhance transparency and control over application access in SAP systems.

NEW QUESTION # 69

In SAP S/4HANA Cloud Public Edition, which of the following can you change in a derived business role if the "Inherit Spaces in Derived Business Roles" checkbox is NOT selected in the leading business role?

- A. Restrictions
- B. Business Catalogs
- **C. Pages**
- D. Business Role Template

Answer: C

Explanation:

In SAP S/4HANA Cloud Public Edition, derived business roles inherit attributes from their leading business role, but the "Inherit Spaces in Derived Business Roles" checkbox controls whether Spaces are inherited. If this checkbox is not selected, administrators can modify the Pages assigned to the derived business role independently of the leading role. Pages in the SAP Fiori launchpad define the layout and content visible to users, such as tiles and applications, and allowing changes in the derived role provides flexibility to tailor the user interface for specific business needs. The Business Role Template, Restrictions, and Business Catalogs, however, remain inherited and cannot be modified in the derived role, as these are core components defined in the leading role to ensure consistency across related roles. This selective modification of Pages enables organizations to customize user experiences while maintaining standardized authorizations, supporting both operational efficiency and security compliance in SAP S/4HANA Cloud Public Edition's role management framework.

NEW QUESTION # 70

Which of the following are Security Goals? Note: There are 2 correct answers to this question.

- A. Repudiation
- B. Identity Authentication
- C. Encryption
- D. Information Integrity

Answer: B,D

Explanation:

* Context: Security goals encompass ensuring user authentication, data integrity, and system confidentiality.

* Solution Descriptions:

* Identity Authentication: Confirms the legitimacy of user identities.

* **Information Integrity:** Ensures data accuracy and consistency, a cornerstone of security.
