Our AD0-E117 exam guide has high quality of service. We provide 24-hour online service on the AD0-E117 training engine. If you have any questions in the course of using the bank, you can contact us by email. We will provide you with excellent after-sales service with the utmost patience and attitude. And we will give you detailed solutions to any problems that arise during the course of using the AD0-E117 learning braindumps. And our AD0-E117 study materials welcome your supervision and criticism.

Adobe AD0-E117 certification exam is a computer-based test that consists of 60 multiple-choice questions. AD0-E117 exam is timed and candidates are given 120 minutes to complete it. The passing score for the exam is 67%. Candidates who pass the exam will receive an Adobe Certified Expert (ACE) certificate, which is recognized by employers worldwide.

The AD0-E117 exam is intended for professionals who have several years of experience in designing and architecting AEM solutions. Candidates for AD0-E117 Exam should be familiar with the end-to-end AEM development process, including designing AEM solutions, configuring AEM author and publish instances, integrating AEM with other systems, and implementing AEM-based applications. Additionally, candidates should have a strong understanding of AEM's underlying architecture, including its content repository, workflow engine, and security model.

100% Pass Quiz Adobe - High Pass-Rate AD0-E117 Reliable Exam Syllabus

This is the AD0-E117 PDF format which contains real AD0-E117 exam questions. You can print it and make a hard copy of this PDF file as well which helps you to prepare on the go. It comes in handy format and helps you prepare well with updated Adobe Experience Manager Architect Master exam questions. Moreover, this PDF has questions that are according to the present content of the test. This PDF format helps you to enhance your understanding of each topic which you need to self-evaluate to boost your Adobe AD0-E117 Exam Score.

Adobe Experience Manager Architect Master Sample Questions (Q64-Q69):

NEW QUESTION # 64

A client using AEM 6.5 on-premise is experiencing an unsustainable repository growth of 100Gb a day. After investigation, an Architect finds out that the DAM is causing this issue. Each image uploaded to the DAM triggers the creation of approximately 100 renditions, necessary by business to consume in different channels and systems. The client also complains about stale content reported by site visitors happening randomly in pages where article-related components are present. How should the Architect address these issues?

- A. Split WCM and DAM in separate instances, set up Connected Assets, and implement a workflow to purge all pages affected by an article change in Dispatcher
- **B. Leverage AEM Adaptive Image Servlet, cache image variations in Dispatcher, and reimplement article-related components to use AJAX to load the content**
- C. Leverage AEM Adaptive Image Servlet cache image variations in Dispatcher, and implement a cache TTL in Dispatcher
- D. Split WCM and DAM in separate instances, set up Connected Assets, and re-implement article-related components to use AJAX to load the content

Answer: B

Explanation:

According to Adobe Experience Manager documentation¹, the Adaptive Image Servlet is a feature that automatically selects the most appropriate rendition of an image asset based on the size of the container in which it is displayed. This can reduce the number of renditions needed and improve performance and scalability of AEM DAM. Caching image variations in Dispatcher can also help reduce repository growth and network traffic. Reimplementing article-related components to use AJAX can prevent stale content issues by dynamically loading fresh content from AEM without refreshing the whole page.

NEW QUESTION # 65

A client is in the discovery process for building a React native app, which is a single codebase that runs natively on iOS and Android. The goal is to reduce development costs. The client wants to reduce content creation costs in the new react Native app by reusing as much of the marketing content already publish in their AEM instance. What should the Architect recommend to meet this requirement?

- **A. Sling Resource Resolution**
- B. Experience Fragments
- C. OSGi Bundles
- D. Content Fragments

Answer: A

NEW QUESTION # 66

A new AEM Sites implementation includes a component that lists the 10 most recently published PDF documents in AEM Assets. The component works as expected during development and passes QA testing. The business starts to use it while entering content and uploading assets in preparation for go-live. A few days later, the component's PDF list is empty. What is the most likely cause of the issue?

- A. A PDF with too large file size has been uploaded.
- B. A PDF with incorrect MIME type has been uploaded.
- C. The component is missing the HTL display context to escape the PDF title.
- **D. The component is missing a matching Oak index.**

Answer: D

Explanation:

"the component is missing a matching Oak index that can efficiently query the PDF documents by their last modified date".

NEW QUESTION # 67

During an optimization session, a client using AEM 6.5 mentions that they face challenges with their AEM Author setup. The client has significant repository growth and can see an increased amount of TAR files in the segmentstore on disk. When editors are working, they see that workflows take up more time. The purging of workflows works as expected. Which two optimizations should

an Architect suggest to take into and further investigate? (Choose two.)

- A. Leverage Transient Workflows where possible
- B. Increase the maxFileSize of the TAR segmentstore
- C. Execute an offline tar compaction twice a day
- D. Leverage workflow offloading for all workflows
- E. Configure the Maximum Parallel Jobs

Answer: A,D

Explanation:

Leverage workflow offloading for all workflows and Leverage Transient Workflows where possible^{1,2,3}. According to Adobe Experience Manager documentation², workflow offloading is a technique that distributes processing tasks among AEM instances in a topology. This can improve performance and scalability of AEM author instances by using dedicated instances for executing workflows. Transient workflows are workflows that do not persist any data or history and are automatically purged after completion³. This can reduce repository growth and improve workflow efficiency.

NEW QUESTION # 68

A media company surveys the end users of their AEM Sites website. The survey identifies that it is difficult to locate content on the site due to lack of relevancy and slow performance when navigating through the large volume of content.

To address both issues, the business team suggests integrating an innovative taxonomy product to the company's AEM implementation. The product is new on the market and the development team has no experience with the technology.

Which two steps should an Architect recommend to evaluate this new feature? (Choose two.)

- A. Develop the integration as proof of concept with sample content
- B. Test usability of the feature with selected business users
- C. Develop the integration as proof of concept with full production content
- D. Develop the integration and deploy it to 50% of the production AEM instances
- E. Test usability of the feature with selected end users

Answer: B,C

NEW QUESTION # 69

.....

Our AD0-E117 exam questions have been widely acclaimed among our customers, and the good reputation in industry prove that choosing our study materials would be the best way for you, and help you gain the AD0-E117 certification successfully. With about ten years' research and development we still keep updating our AD0-E117 Prep Guide, in order to grasp knowledge points in accordance with the exam, thus your study process would be targeted and efficient.
