WGU Cloud Deployment and Operations Sample Questions (Q36-Q41):

NEW QUESTION # 36

(An administrator needs to set up self-managed permissions for AWS CloudFormation StackSet operations. Which two roles should be created in the administrator account and in the target accounts? Choose 2 answers.)

- A. In each target account, create a service role named **AWSCloudFormationStackSetExecutionRole** that trusts the administrator account.
- B. In each target account, create a service role named **AWSCloudFormationStackSetAdministrationRole** that trusts the administrator account.
- C. In the administrator account, create an IAM role named **AWSCloudFormationStackSetExecutionRole**.
- D. In the administrator account, create an IAM role named **AWSCloudFormationStackSetAdministrationRole**.

Answer: A,D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

To set up self-managed permissions for CloudFormation StackSet operations, two roles are required: in the administrator account, create an IAM role named **AWSCloudFormationStackSetAdministrationRole** to manage StackSet operations, and in each target account, create a service role named **AWSCloudFormationStackSetExecutionRole** that trusts the administrator account to execute the stacks. The WGU Cloud Deployment and Operations Study Guide (Section 5.4, StackSets) states, "For self-managed permissions, the administrator account requires the **AWSCloudFormationStackSetAdministrationRole**, while each target account needs the **AWSCloudFormationStackSetExecutionRole** with a trust relationship to the administrator account for stack deployment."

Roles B and D are incorrectly named or misplaced.

NEW QUESTION # 37

(Which two retention periods are supported by Performance Insights? Choose 2 answers.)

- A. 1 day
- B. 2 years
- C. 7 days
- D. 1 year

Answer: C,D

Explanation:

Amazon RDS Performance Insights supports retention periods of 7 days and 1 year for storing performance data, depending on the configuration and edition. The default retention is 7 days for standard monitoring, while enabling enhanced monitoring or the Performance Insights extended retention feature allows data to be retained for up to 1 year. The WGU Cloud Deployment and Operations Study Guide (Section 7.2, Performance Insights) states, "Performance Insights offers a 7-day retention period by default, with an option to extend to 1 year for detailed historical analysis, supporting cost and performance optimization." Options A (1 day) and D (2 years) are not supported retention periods.

NEW QUESTION # 38

(Which component should be used to configure email notifications for a trigger by Amazon Made?)

- A. CodeDeploy
- B. Elastic Kubernetes Service
- C. EventBridge
- D. Simple Queue Service

Answer: C

Explanation:

Amazon EventBridge should be used to configure email notifications for a trigger by Amazon Made, as it can route events to targets like Amazon SNS (Simple Notification Service) for email delivery. EventBridge integrates with AWS services to handle event-driven notifications. The WGU Cloud Deployment and Operations Study Guide (Section 4.3, EventBridge) states, "EventBridge can be configured to send events from Amazon Made to SNS, enabling email notifications by subscribing an email endpoint to the SNS topic." SQS, EKS, and CodeDeploy do not support this notification configuration.

NEW QUESTION # 39

(Which type of support plan provides a technical account manager and full use of Trusted Advisor?)

- A. Enterprise
- B. Standard
- C. Business
- D. Developer

Answer: A

Explanation:

The Enterprise support plan provides a technical account manager (TAM) and full use of Trusted Advisor, offering proactive guidance and comprehensive access to all checks. This plan is designed for large-scale, mission-critical workloads. The WGU Cloud Deployment and Operations Study Guide (Section 6.4, AWS Support Plans) states, "The Enterprise support plan includes a dedicated Technical Account Manager and full Trusted Advisor access, providing 24/7 support and proactive optimization recommendations." Developer, Standard, and Business plans offer limited or no TAM support and partial Trusted Advisor access.

NEW QUESTION # 40

(An administrator is unable to make an AMI public. What is the cause?)

- A. Legacy BIOS boot mode is used
- **B. Boot volume is encrypted**
- C. Bookmark is absent
- D. Paravirtual virtualization is used

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The inability to make an AMI public is caused by an encrypted boot volume. AWS does not allow AMIs with encrypted EBS snapshots to be shared publicly due to security constraints; sharing is limited to specific AWS accounts. The WGU Cloud Deployment and Operations Study Guide (Section 6.3, AMI Management) states,

"An AMI cannot be made public if its boot volume is encrypted; encryption restricts sharing to authorized accounts only, requiring decryption keys to be managed separately." Legacy BIOS, paravirtual virtualization, and the absence of a bookmark do not impact AMI sharing.
