Reliable Salesforce-Data-Cloud Test Tips - Reliable Salesforce-Data-Cloud Dumps Ppt

Now, our Salesforce-Data-Cloud learning prep can meet your demands. You will absorb the most useful knowledge with the assistance of our study materials. The Salesforce-Data-Cloud certificate is valuable in the job market. But you need professional guidance to pass the exam. For instance, our Salesforce-Data-Cloud exam questions fully accords with your requirements. Professional guidance is indispensable for a candidate. As a leader in the field, our Salesforce-Data-Cloud learning prep has owned more than ten years' development experience. Thousands of candidates have become excellent talents after obtaining the Salesforce-Data-Cloud certificate. If you want to survive in the exam, our Salesforce-Data-Cloud actual test guide is the best selection. Firstly, our study materials can aid you study, review and improvement of all the knowledge.

Salesforce Data Cloud Accredited Professional Exam Sample Questions (Q170-Q175):

NEW QUESTION # 170

A consultant is discussing the benefits of Data Cloud with a customer that has multiple disjointed data sources. Which two functional areas should the consultant highlight in relation to managing customer data?
Choose 2 answers

- **A. Data Harmonization**
- B. Data Marketplace
- **C. Unified Profiles**
- D. Master Data Management

Answer: A,C

Explanation:

Data Cloud is an open and extensible data platform that enables smarter, more efficient AI with secure access to first-party and industry data. Two functional areas that the consultant should highlight in relation to managing customer data are:

Data Harmonization: Data Cloud harmonizes data from multiple sources and formats into a common schema, enabling a single source of truth for customer data. Data Cloud also applies data quality rules and transformations to ensure data accuracy and consistency.

Unified Profiles: Data Cloud creates unified profiles of customers and prospects by linking data across different identifiers, such as email, phone, cookie, and device ID. Unified profiles provide a holistic view of customer behavior, preferences, and interactions across channels and touchpoints. The other options are not correct because:

Master Data Management: Master Data Management (MDM) is a process of creating and maintaining a single, consistent, and trusted source of master data, such as product, customer, supplier, or location data.

Data Cloud does not provide MDM functionality, but it can integrate with MDM solutions to enrich customer data.

Data Marketplace: Data Marketplace is a feature of Data Cloud that allows users to discover, access, and activate data from third-party providers, such as demographic, behavioral, and intent data. Data Marketplace is not a functional area related to managing customer data, but rather a source of external data that can enhance customer data. References:

NEW QUESTION # 171

A customer has requested that their personal data be deleted. Which action should be performed to accommodate this request in Data Cloud?

- A. Utilize the Data Rights Subject Request tool to request deletion of the customer's information
- B. Manually delete customer and related records using the Profile Explorer
- **C. Use Consent API to request deletion of the customer's information**
- D. Use Ingestion API to request deletion of the customer's information

Answer: C

Explanation:

Explanation

This action should be performed to accommodate the request to delete personal data in Data Cloud. The Consent API allows you to set a consent flag for an individual that prevents further processing of their data and deletes their records from source data streams.

NEW QUESTION # 172

When can the data types be changed during ingestion?

- A. After the DSO is created
- B. Data type can be changed at any time
- C. Data type can never be changed
- **D. Before DSO is created**

Answer: D

Explanation:

Explanation

The data types can be changed during ingestion before the Data Source Object (DSO) is created. A DSO is a container for ingested data that defines the schema, format, and metadata of the data. Data types can be changed in the Data Explorer before creating a DSO by using the Edit Schema option. Once a DSO is created, the data types cannot be changed. References: Create a Data Source Object

NEW QUESTION # 173

When can the data types be changed during ingestion?

- A. After the DSO is created
- B. Data type can be changed at any time
- C. Data type can never be changed
- D. Before DSO is created

Answer: D

Explanation:

The data types can be changed during ingestion before the Data Source Object (DSO) is created. A DSO is a container for ingested data that defines the schema, format, and metadata of the data. Data types can be changed in the Data Explorer before creating a DSO by using the Edit Schema option. Once a DSO is created, the data types cannot be changed. Reference: Create a Data Source Object

NEW QUESTION # 174

A consultant wants to confirm the Identity resolution they just set up. Which two features can the consultant use to validate the data on a unified profile?

Choose 2 answers

- A. Data Explorer
- B. Data Actions
- C. Identity Resolution
- D. Query API

Answer: A,D

Explanation:

To validate the data on a unified profile after setting up identity resolution, the consultant can use Data Explorer and the Query API. Here's why:

Understanding Identity Resolution Validation

Identity resolution combines data from multiple sources into a unified profile.

Validating the unified profile ensures that the resolution process is working correctly and that the data is accurate.

Why Data Explorer and Query API?

Data Explorer :

Data Explorer is a built-in tool in Salesforce Data Cloud that allows users to view and analyze unified profiles.

It provides a detailed view of individual profiles, including resolved identities and associated attributes.

Query API :

The Query API enables programmatic access to unified profiles and related data.

Consultants can use the API to query specific profiles and validate the results of identity resolution programmatically.

Other Options Are Less Suitable :

A). Identity Resolution : This refers to the process itself, not a tool for validation.

B). Data Actions : Data actions are used to trigger workflows or integrations, not for validating unified profiles.

Steps to Validate Unified Profiles

Using Data Explorer :

Navigate to Data Cloud > Data Explorer .

Search for a specific profile and review its resolved identities and attributes.

Verify that the data aligns with expectations based on the identity resolution rules.

Using Query API :

Use the Query API to retrieve unified profiles programmatically.

Compare the results with expected outcomes to confirm accuracy.

Conclusion

The consultant should use Data Explorer and the Query API to validate the data on unified profiles, ensuring that identity resolution is functioning as intended.

NEW QUESTION # 175

.....

If you have aspiration to be an IT specialist with considerable salary and work in big company, our Salesforce exam dumps will make your dream closer. You just need to prepare Salesforce-Data-Cloud real questions with one or two days and we will give your support in every steps of your IT test preparation if you have any problems and doubts to our Salesforce-Data-Cloud Pdf Torrent.

Reliable Salesforce-Data-Cloud Test Tips: https://www.dumpleader.com/Salesforce-Data-Cloud_exam.html
