

Free PDF 2026 Juniper JN0-460: First-grade Reliable Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Test Book

2026 Latest TorrentValid JN0-460 PDF Dumps and JN0-460 Exam Engine Free Share: <https://drive.google.com/open?id=1wp04ICO9sBOTZScgBqcbjxkTTxuc4AXe>

Many students often start to study as the exam is approaching. Time is very valuable to these students, and for them, one extra hour of study may mean 3 points more on the test score. If you are one of these students, then Mist AI Wired, Specialist (JNCIS-MistAI-Wired) exam tests are your best choice. Because students often purchase materials from the Internet, there is a problem that they need transport time, especially for those students who live in remote areas. When the materials arrive, they may just have a little time to read them before the exam. However, with JN0-460 Exam Questions, you will never encounter such problems, because our materials are distributed to customers through emails. After you have successfully paid, you can immediately receive JN0-460 test guide from our customer service staff, and then you can start learning immediately.

Juniper JN0-460 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Wired Assurance Management or Operations: This section of the exam measures the skills of Network Operations Engineers and focuses on the management and operational aspects of Wired Assurance. It covers switch management, port profiles, and dynamic port configuration to ensure optimal network performance. The section also explores service-level expectations, client insights, and the use of APIs for improved monitoring and automation. Candidates gain an understanding of how MistAI enables proactive management and predictive troubleshooting to maintain service quality.
Topic 2	<ul style="list-style-type: none">Wired Assurance Provisioning or Deployment: This section of the exam measures the skills of Network Deployment Specialists and focuses on the provisioning and deployment processes of Wired Assurance. It includes the essential steps and options involved in setting up networks, from configuration templates to deployment methodologies. Candidates learn about provisioning procedures, supported architectures, and the use of site variables to streamline automation and consistency across wired infrastructures.
Topic 3	<ul style="list-style-type: none">Wired Assurance Fundamentals: This section of the exam measures the skills of Network Support Engineers and covers the foundational elements of Wired Assurance within the MistAI ecosystem. It introduces candidates to key concepts such as supported devices, solution architecture, and the main features and components that define Wired Assurance functionality. Additionally, it highlights how MistAI accounts, analytics, and subscriptions integrate to deliver intelligent insights for network performance and operations.

Topic 4	<ul style="list-style-type: none"> Campus Fabric Architecture: This section of the exam measures the skills of Network Design Engineers and focuses on understanding and deploying Campus Fabric Architectures. It introduces essential design concepts such as EVPN multihoming, IP Clos architecture, and micro-segmentation. The section also compares CRB and ERB models, explains scaling requirements, and highlights how the Campus Fabric Core-Distribution design supports high-performance, scalable, and secure enterprise networks.
Topic 5	<ul style="list-style-type: none"> Campus EVPN-VXLAN: This section of the exam measures the skills of Data Center Network Engineers and explores the key principles of VXLAN and EVPN technologies. Candidates learn about Layer 2 tunneling, data and control plane operations, and the functions of VTEPs and VXLAN gateways. Additionally, it covers advanced EVPN concepts such as multipath routing, route types, and identifiers. The section concludes with a focus on MAC learning and policy applications to ensure efficient, scalable, and resilient network fabrics.

JN0-460 Valid Dumps, JN0-460 Pass Test Guide

Nowadays, seldom do the exam banks have such an integrated system to provide you a simulation test. You will gradually be aware of the great importance of stimulating the actual exam after learning about our JN0-460 Study Tool. Because of this function, you can easily grasp how the practice system operates and be able to get hold of the core knowledge about the Mist AI Wired, Specialist (JNCIS-MistAI-Wired) exam. In addition, when you are in the real exam environment, you can learn to control your speed and quality in answering questions and form a good habit of doing exercise, so that you're going to be fine in the Mist AI Wired, Specialist (JNCIS-MistAI-Wired) exam.

Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q47-Q52):

NEW QUESTION # 47

Which three switch testing tools are available when using Wired Assurance?(Choose three.)

- A. iPerf
- B. cable test
- C. ping
- D. load factory-default
- E. bounce port

Answer: B,C,E

Explanation:

According to Juniper Mist Wired Assurance documentation, three built-in diagnostic tools available for testing switch functionality are Bounce Port, Ping, and Cable Test.

Bounce Port allows you to disable and re-enable a port to reset connectivity.

Ping verifies Layer 3 reachability between the switch and target IPs.

Cable Test performs diagnostics to detect wiring faults, impedance mismatches, or cable lengths.

These tools are accessed directly from the Switch Testing Tools section in the Mist dashboard and are available for EX Series and QFX Series switches onboarded to the Mist cloud.

NEW QUESTION # 48

What information does Mist use to determine if the port is classified as an uplink?(Choose two.)

- A. if the port has a description configured
- B. if the port is an STP root port
- C. if TX and RX are higher than the rest of the ports
- D. if the port has an MTU greater than 1500 configured

Answer: B,C

Explanation:

Juniper Mist automatically classifies ports to simplify visibility and automation within Wired Assurance. The Mist cloud analyzes port telemetry and link behavior to determine port roles, including uplinks.

"Mist uses machine learning and switch telemetry to automatically detect uplinks by analyzing traffic behavior and topology information. Uplink ports typically exhibit higher TX/RX utilization and are identified as spanning-tree root or forwarding ports connecting upstream devices." Option A:Correct - Mist examines traffic statistics. Ports with significantly higher TX/RX utilization relative to others are likely uplinks.

Option B:Incorrect - MTU size is not a classification criterion.

Option C:Correct - Mist uses STP information (root or designated port status) to identify uplinks.

Option D:Incorrect - port description fields are for administrative purposes only and are not used by Mist analytics.

NEW QUESTION # 49

A company is planning to deploy a Juniper Mist campus fabric and wants to implement group-based policy (GBP) for microsegmentation.

Which statement is correct in this scenario?

- A. GBP configuration should be repeated on every individual switch in the fabric.
- B. **GBP requires access switches to be EX4100 or EX4400 switches.**
- C. GBP configuration must be applied to each individual switch in the fabric using the CLI.
- D. GBP can be implemented on any Juniper Networks switch that supports EVPN-VXLAN.

Answer: B

Explanation:

Group-Based Policy (GBP) is a Juniper EVPN-VXLAN feature that enables microsegmentation without requiring multiple VRFs or VLANs. It is implemented within Juniper Mist's Wired Assurance and Campus Fabric frameworks.

"GBP provides scalable, identity-based segmentation for campus fabrics and is supported on EX4100 and EX4400 Series switches operating in EVPN-VXLAN mode under Mist management." The feature requires hardware and software support for EVPN-VXLAN and GBP tagging, which is currently available on specific EX models managed by Mist Cloud.

Option A:Correct - GBP requires compatible access switches, specifically EX4100 and EX4400 models.

Option B:Incorrect - GBP is centrally managed through Mist Cloud, not configured per switch.

Option C:Incorrect - GBP is provisioned via Mist Cloud, not the CLI.

Option D:Incorrect - GBP is not supported on all EVPN-capable switches; only on defined platforms (EX4100 /EX4400).

NEW QUESTION # 50

In Campus EVPN-VXLAN deployments, multipath is used to: (Select two)

- A. **Enhance load balancing across multiple paths**
- B. **Increase network redundancy and bandwidth**
- C. Provide a single path for data flow
- D. Simplify network management

Answer: A,B**NEW QUESTION # 51**

Which API is used within the Juniper Mist solution?

- A. SOAP
- B. XML
- C. REST
- D. JSON-RPC

Answer: C

Explanation:

Juniper Mist is built on a fully open and RESTful API architecture, allowing programmatic access to all functions.

Administrators and developers can automate switch provisioning, monitoring, and troubleshooting directly via the REST API.

This open design supports JSON data formatting and HTTPS authentication, ensuring secure integration with external systems.
