Based on the credibility in this industry, our AWS-Solutions-Architect-Professional study braindumps have occupied a relatively larger market share and stable sources of customers. Such a startling figure --99% pass rate is not common in this field, but we have made it with our endless efforts. The system of AWS-Solutions-Architect-Professional test guide will keep track of your learning progress in the whole course. Therefore, you can have 100% confidence in our AWS-Solutions-Architect-Professional exam guide. According to our overall evaluation and research, seldom do we have cases that customers fail the AWS-Solutions-Architect-Professional Exam after using our study materials. But to relieve your doubts about failure in the test, we guarantee you a full refund from our company by virtue of the related proof of your report card. Of course you can freely change another AWS-Solutions-Architect-Professional exam guide to prepare for the next exam. Generally speaking, our company takes account of every client' difficulties with fitting solutions.

The AWS-Solutions-Architect-Professional Certification Exam consists of multiple-choice and multiple-response questions that assess the candidate's ability to design, deploy, and manage AWS services and applications. AWS-Solutions-Architect-Professional exam covers a wide range of topics, including advanced networking, hybrid architectures, security and compliance, and cost optimization. Candidates are expected to have a deep understanding of AWS services and features, as well as the ability to apply best practices and design principles to real-world scenarios.

Amazon AWS-Solutions-Architect-Professional Exam Questions - Get Excellent Scores

Our AWS-Solutions-Architect-Professional question materials are designed to help ambitious people. The nature of human being is pursuing wealth and happiness. Perhaps you still cannot make specific decisions. It doesn't matter. We have the free trials of the AWS-Solutions-Architect-Professional study materials for you. The initiative is in your own hands. Our AWS-Solutions-Architect-Professional Exam Questions are very outstanding. People who have bought our products praise our company highly. In addition, we have strong research competence. So you can always study the newest version of the AWS-Solutions-Architect-Professional exam questions.

Amazon AWS Certified Solutions Architect - Professional Sample Questions (Q319-Q324):

NEW QUESTION # 319

Two Auto Scaling applications, Application A and Application B, currently run within a shared set of subnets. A Solutions Architect wants to make sure that Application A can make requests to Application B,

but Application B should be denied from making requests to Application A. Which is the SIMPLEST solution to achieve this policy?

- A. Migrating the applications to separate subnets from each other
- B. Using Network Access Control Lists to allow/deny traffic based on application IP addresses
- C. Using security groups that reference the application server's IP addresses
- D. Using security groups that reference the security groups of the other application

Answer: D

NEW QUESTION # 320

A company hosts a blog post application on AWS using Amazon API Gateway, Amazon DynamoDB, and AWS Lambda. The application currently does not use API keys to authorize requests. The API model is as follows:

GET/posts/[postid] to get post details

GET/users/[userid] to get user details

GET /comments/[commentid] to get comments details

The company has noticed are actively discussing topics in the comments section, and the company wants to increase user engagement by marking the comments appears in real time.

Which design should be used to reduce comment latency and improve user experience?

- A. Use edge-optimized API with Amazon CloudFront to cache API responses.
- B. Modify the blog application code to request GET comment {commented} every 10 seconds.
- C. Change the concurrency limit of the Lambda functions to lower the API response time.
- D. Use AWS AppSync and leverage WebSockets to deliver comments

Answer: D

NEW QUESTION # 321

A public retail web application uses an Application Load Balancer (ALB) in front of Amazon EC2 instances running across multiple Availability Zones (AZs) in a Region backed by an Amazon RDS MySQL Multi-AZ deployment. Target group health checks are configured to use HTTP and pointed at the product catalog page.

Auto Scaling is configured to maintain the web fleet size based on the ALB health check.

Recently, the application experienced an outage. Auto Scaling continuously replaced the instances during the outage. A subsequent investigation determined that the web server metrics were within the normal range, but the database tier was experiencing high load, resulting in severely elevated query response times.

Which of the following changes together would remediate these issues while improving monitoring capabilities for the availability and functionality of the entire application stack for future growth? (Select TWO.)

- A. Configure the target group health check to point at a simple HTML page instead of a product catalog page and the Amazon Route 53 health check against the product page to evaluate full application functionality. Configure Amazon CloudWatch alarms to notify administrators when the site fails.
- B. Configure an Amazon CloudWatch alarm for Amazon RDS with an action to recover a high-load, impaired RDS instance in the database tier.
- C. Configure the target group health check to use a TCP check of the Amazon EC2 web server and the Amazon Route 53 health check against the product page to evaluate full application functionality. Configure Amazon CloudWatch alarms to notify administrators when the site fails.
- D. Configure an Amazon ElastiCache cluster and place it between the web application and RDS MySQL instances to reduce the load on the backend database tier.
- E. Configure read replicas for Amazon RDS MySQL and use the single reader endpoint in the web application to reduce the load on the backend database tier.

Answer: A,D

NEW QUESTION # 322

A benefits enrollment company is hosting a 3-tier web application running in a VPC on AWS which includes a NAT (Network Address Translation) instance in the public Web tier. There is enough provisioned capacity for the expected workload for the new fiscal year benefit enrollment period plus some extra overhead. Enrollment proceeds nicely for two days and then the web tier becomes unresponsive, upon investigation using CloudWatch and other monitoring tools it is discovered that there is an extremely large and unanticipated amount of inbound traffic coming from a set of 15 specific IP addresses over port 80 from a country where the benefits company has no customers. The web tier instances are so overloaded that benefit enrollment administrators cannot even SSH into them. Which activity would be useful in defending against this attack?

- A. Change the EIP (Elastic IP Address) of the NAT instance in the web tier subnet and update the Main Route Table with the new EIP
- B. Create 15 Security Group rules to block the attacking IP addresses over port 80
- C. Create a custom route table associated with the web tier and block the attacking IP addresses from the IGW (Internet Gateway)
- D. Create an inbound NACL (Network Access control list) associated with the web tier subnet with deny rules to block the attacking IP addresses

Answer: D

NEW QUESTION # 323

One of the components that is part of ec2-net-utils used with ENI's is ec2ifscan. Which of the following is not correct about ec2-net-utils?

- A. ec2-net-utils extends the functionality of the standard ifup.
- B. ec2-net-utils generates an interface configuration file suitable for use with DHCP.
- C. ec2-net-utils detaches a primary network interface from an instance.
- D. ec2-net-utils identifies network interfaces when they are attached, detached, or reattached to a running instance.

Answer: C

Explanation:

Each instance in a VPC has a default elastic network interface (the primary network interface) that is assigned a private IP address from the IP address range of your VPC. You cannot detach a primary network interface from an instance. You can create and attach additional elastic network interfaces. Amazon Linux AMIs may contain additional scripts installed by AWS, known as ec2-net-utils. One of the components that is part of ec2-net-utils used with ENI's is ec2ifscan.

Its function is to check for network interfaces that have not been configured and configure them
