

ユニークなPL-600過去問題試験-試験の準備方法-効率的なPL-600テスト難易度

さらに、Xhs1991 PL-600ダンプの一部が現在無料で提供されています：https://drive.google.com/open?id=1tytuq5-c6SABmtqOWgI_RR30K8s5fcUg

PL-600学習教材は、Microsoft専門資格試験に100%合格することを保証します。Xhs1991のPL-600ガイドトレントの品質に自信を持っています。PL-600トレーニングブレインダンプの合格率は98%から100%です。PL-600練習問題に完全に頼ることができます。優れた品質を確認するためのPL-600学習準備の無料デモがあります。PL-600試験問題を無料でダウンロードする限り、問題に満足し、Microsoft Power Platform Solution Architect試験に簡単に合格します。

Microsoft PL-600試験では、Microsoft Power Platform Technologiesに関連するさまざまなトピックをカバーしています。これらのトピックには、Power Apps、Power Automate、Power BI、およびPower Virtual Agentを使用したソリューションの設計と実装が含まれます。この試験では、データモデリング、データの管理、および他のMicrosoftおよびサードパーティのサービスとPower Platform Technologiesの統合に関連するトピックもカバーしています。

PL-600試験は、Power Platformソリューションの設計、他のシステムとの統合、データモデルやエンティティの作成、およびプラットフォームの管理など、さまざまなトピックをカバーしています。試験は40~60の多肢選択問題から構成され、制限時間は150分です。

Microsoft PL-600認定試験は、IT業界において世界的に認められた優れた基準として雇用主に認知されています。この認定は、候補者がMicrosoft Power Platformを使用してソリューションを設計・展開するために必要なスキルと知識を有していることを示し、また、業界の最新技術とベストプラクティスに常にアップデートしていることを示しています。

PL-600テスト難易度、PL-600専門知識

この情報の時代には、Microsoft業界にとても注目され、この強い情報技術業界にMicrosoft人材が得難いです。こうしてPL-600認定試験がとても重要になります。でも、この試験がとても難しくてMicrosoft通になりたい方が障害になっています。

Microsoft Power Platform Solution Architect 認定 PL-600 試験問題 (Q32-Q37):

質問 #32

A company plans to transition from an existing proprietary solution to a Power Platform solution. The company is consolidating data from several sources.

The company reports the following data quality issues with the existing solution:
Users often encounter a character limit when entering data.

The database includes multiple instances of duplicate records.

You need to recommend solutions to ensure that the data quality issues are not present in the Power Platform solution.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

| Issue | Solution |
|-------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| Users often encounter a character limit when entering data. | Define a data mask. Define and implement duplicate detection rules. Define the data type and format for each column. |
| The database includes multiple instances of some records. | Define requirements for data entry. Define and implement duplicate detection rules. Define the data type and format for each column. |

正解:

解説:

| Issue | Solution |
|-------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| Users often encounter a character limit when entering data. | Define a data mask. Define and implement duplicate detection rules. Define the data type and format for each column. |
| The database includes multiple instances of some records. | Define requirements for data entry. Define and implement duplicate detection rules. Define the data type and format for each column. |

質問 # 33

A client uses Dynamics 365 Sales, Power BI datasets, and Power BI dataflows.

The Dynamics 365 Sales implementation has security roles that restrict data export. You need to ensure that data has the same restrictions in Power BI as it does in Dynamics 365 Sales.

You need to design the security to avoid sensitive data from being seen.

Which two actions should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Share Power BI dashboards only with users who are supported to see this data.
- B. Use Microsoft Dataverse restrictions before setting up the Power BI reports.
- C. Limit the role in Dynamics 365 Sales to only data allowed so it cannot be exported to Microsoft Excel.
- D. Limit the role and ensure that exporting to Microsoft Excel is not allowed in both Dynamics 365 Sales and Power BI.

正解: A、D

解説:

A: When you share a dashboard or report, the people you share it with can view it and interact with it, but can't edit it. They see the same data that you see in the dashboard and reports and get access to the entire underlying dataset unless row-level security (RLS) is applied to the underlying dataset.

B: Depending on the sensitivity of an organization's data, it is often necessary to disable the ability to export or print reports.

質問 #34

Case Study 3 - Fabrikam, inc.

Background

Fabrikam, Inc. manufactures industrial metal cutting machines. The company installs and services the machines for customers. Fabrikam has manufacturing plants in Canada, France, and China. The company also has regional service organizations that are responsible for installation and maintenance of the machines.

Current environment

Overview

Operations for the company are managed very informally. Only a small number of long-term employees are aware of all manufacturing processes. The company has been experiencing quality issues associated with its manufacturing operations and installations.

The company wants to implement a way to capture quality inspection results for each machine produced. Current inspection checklists are stored in the Files section of a Teams channel for inspectors. Inspectors commonly print the incorrect inspection checklist.

The company has specific inspection stations for certain inspection steps. Each station has the gauges and equipment required for related inspection steps. There is often a backlog at specific inspection stations. This results in delays in shipping machines to customers.

Accounting system

The current system does not handle shop floor or manufacturing planning functionality.

Machines are assigned serial numbers and placed in stock until they are shipped to customers.

Employee information is maintained only within the accounting system. Access to the information is strictly controlled due to privacy regulations and company policies.

Other systems

The company has an enterprise Microsoft 365 subscription. The company uses Microsoft 365 only for sending and receiving email. The company uses photos of employees to generate employee badges. Photos are uploaded into Microsoft 365 user profiles.

The company recently started using Dynamics 365 Field Service to manage and maintain the machines that it installs for its customers. The app has not been customized.

The company has added roles, skills, and certification proficiencies to Dynamics 365 Field Service resources to support both customer onsite inspections and final manufacturing inspections.

Requirements

Quality inspection app

Fabrikam is evaluating Microsoft Power Platform to determine whether it can meet the company's requirements for a manufacturing defect and quality inspection solution. Each machine produced must be subjected to a quality inspection at various points during production. Each machine must undergo a more extensive quality inspection before the machine can be shipped to the customer.

Inspection orders

Inspection orders must:

- Allow entry of quality ratings of passed or failed for each quality metric identified for the machine being rated.
- Include information about the person who performed each inspection step and any comments made by the inspector.
- Be automatically marked as failed if one inspection step rating is marked as failed.
- Be automatically marked for re-inspection should a machine fail inspection. The new inspection order must be created by using the originating inspection order as a template.

Inspectors must fill in findings comments and upload at least one photo for any inspection step that is marked as failed.

Inspection standardization

Standardized checklists must be stored in the solution for use by inspectors. A copy must be created when a new inspection is initiated. The solution must:

Prevent an inspector from proceeding to the next step of the checklist until required information for a step is entered.

Support the addition of steps to inspections to support custom features added to a machine for a customer.

Support the direct input of measurements from testing gauges to avoid incorrect readings being entered by inspectors.

Provide a visual representation of the testing measurement limits for each step. Include an indication of how the measured value compares to measurement limits and whether the measurement is within tolerance. Users must be able to configure the visualizations to display the minimum value and maximum value, and whether the reading is within the tolerance of a single targeted value. It must also be able to be used for maintenance inspections once the machine has been installed.

Support the ability to store photo references within each inspection step to document defects found during inspections.

Security

Users must be active employees of Fabrikam.

When a user signs into the inspection solution, the solution must display a picture of the employee who has signed in.

Supervisors must be able to modify standard checklists. Other employees must be prevented from modifying checklists.

You must prevent users from changing inspection order data once an inspection is marked as final.

Analytics and reporting

The solution must:

Provide metrics including existing and upcoming demand by inspection station, average time spent per user at a station, and average time a machine spends at each inspection point.

Provide metrics per inspector including number of inspections performed by month, and number of inspections per rating type (pass, fail).

Provide a printed quality certificate to be included with each machine.

Issues

During initial testing of the solution, testers report that they cannot see the photos taken during a previously failed inspection.

You need to manage user access to the app.

Which two connection types should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Microsoft Dataverse connector
- B. Virtual table with a customer connector
- C. Office 365 Outlook connector
- D. Office 365 Users connector

正解: A, D

解説:

Office 365 Users lets you access user profiles in your organization using your Office 365 account.

You can use the connection in your Power Platform app.

Dataverse is part of the Microsoft 365 collaboration and productivity tools. Using federation, applications can connect to Dataverse using the same system user identities and credentials available in an Azure Active Directory based network.

Scenario:

Users must be active employees of Fabrikam

Quality inspection app: Fabrikam is evaluating Microsoft Power Platform to determine whether it can meet the company's requirements for a manufacturing defect and quality inspection solution. Each machine produced must be subjected to a quality inspection at various points during production. Each machine must undergo a more extensive quality inspection before the machine can be shipped to the customer.

質問 # 35

Case Study 2 - Relecloud

Background

Relecloud provides regional air service in North America. The company uses a variety of systems, apps, and services to manage the business. You are hired to design a new solution to manage passenger information, reservations, and maintenance.

Current environment

The company uses Microsoft Office 365.

The company has a custom app for managing and tracking passenger luggage. The app uses Microsoft Dataverse.

For flights longer than four hours, passengers receive a meal. Customers can select a meal when they make a reservation and can save the meal choices as a customer preference.

The company offers two types of meals: standard and vegetarian. Meal types can be temporarily unavailable. The airline is considering offering other meal types, such as gluten-free and low-sodium options.

The company uses paper-based reservation checklists to help ensure that all the steps for a reservation are complete.

The company uses vendors to service aircraft.

Environment

Ensure that employees can sign in to all Microsoft apps by using one set of credentials per employee.

Minimize the use of third-party products and custom development.

Reduce customer support call volumes by having the system automatically resolve common issues.

The security rule for agents must contain the privileges in the default Customer Service Representative security role.

Log issues as cases. The case form must show variable sections based on the case type.

Include a custom entity named Seats and grant agents access to the entity.

Application use layout should be role specific.

Agents

You must standardize the format used by agents to enter customer phone numbers.

Agents need a solution to replace paper reservation checklists.

Agents need dashboards to show a current count of all reservations on the entity.

Agents need a way to track reservation issues.

Agents need a visual indicator in the interface to determine the reservation step to provide a seamless customer experience. Agents need different versions of cancellation policies to send customers. One version must be controllable within the system. Agents need to view which pieces of luggage match to each passenger, and then need to add the total on the passenger record.

IT

IT staff needs a mobile solution to see IT cases at the top of the menu since this is their primary focus.

IT staff needs a system that is easy to navigate to active cases.

IT specialists want to design Power BI reports. They need to understand the underlying table relationships of the system.

IT specialists need a solution that is visual rather than text-based so they can quickly complete their tasks.

Management

Management requires paginated reports for stakeholders.

Management wants to provide frequent flyers with better service when the flyers call.

Managers need to see all customer dashboards at the top of their menu on their mobile device.

Maintenance

Maintenance supervisors must not have access to Dynamics 365 Customer Service. The supervisors must be able to communicate with the contracts team about contracts.

Aircraft maintenance vendors must have only view and upload privileges to their invoices and receipts.

Contracts with maintenance companies must be stored in Dynamics 365 Customer Service.

You need to provide the IT specialists with design diagrams.

What should you provide?

- A. AI Builder
- B. Entity relationship diagram (ERD)**
- C. Dynamics 365 Product Visualize
- D. Business process modeler (BPM)

正解: B

解説:

With an ERD you can understand the model and relationships so you can create the reports on top of that.

質問 # 36

You need to recommend the appropriate messaging channel solutions for the organization.

What should you recommend? To answer, drag the appropriate messaging options to the correct user types.

Each messaging option may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

| Messaging options | User type | Messaging option |
|--------------------------------------------|-----------------------|------------------|
| Power Apps portals | Worker support agents | |
| Dynamics 365 Customer Service | Patients | |
| Omnichannel for Customer Service dashboard | | |

正解:

解説:

| Messaging options | User type | Messaging option |
|--------------------------------------------|-----------------------|--------------------------------------------|
| Power Apps portals | Worker support agents | Omnichannel for Customer Service dashboard |
| Dynamics 365 Customer Service | Patients | Dynamics 365 Customer Service |
| Omnichannel for Customer Service dashboard | | |

Explanation:

| User type | Messaging option |
|-----------------------|--------------------------------------------|
| Worker support agents | Omnichannel for Customer Service dashboard |
| Patients | Dynamics 365 Customer Service |

Box 1: Omnichannel for Customer Service dashboard

Scenario: Workers must be able to communicate in near real-time with worker support agents.

The company has a team of worker support agents that respond to inquiries from current and prospective workers. Some of the worker support agents are multilingual.

If you choose to expand your customer service offering to provide chat and channels, the Customer Service workspace seamlessly adjusts to support managing conversations as well.

Note: As an agent with the Customer Service Representative security role, when you open Customer Service workspace, you start on the Customer Service Agent Dashboard unless your administrator has changed the default view. This dashboard shows you your active cases, cases you can work in queues you are assigned to, and your open activities. You can open existing cases and activities or begin working new cases from the queues you are assigned to and create activities.

Box 2: Dynamics 365 Customer Service

Scenario: First Up uses an on-premises system to manage current and historical patient data including medications and medical visits.
