

# SCAIP Test Dumps - Free SCAIP Learning Cram

In the face of fierce competition, you should understand the importance of time. You must walk in front of the competitors. If you have more strength, you will get more opportunities. Your dream life can really become a reality! SCAIP learning materials are here, right to choose! And you will find that you will get benefited from SCAIP Exam Braindumps far beyond you can image. Not only you can get more professional knowledge but also you can get the SCAIP certification to find a better career.

Do you often feel that your ability does not match your ambition? Are you dissatisfied with the ordinary and boring position? If your answer is yes, you can try to get the SCAIP certification that you will find there are so many chances wait for you. You can get a better job; you can get more salary. But if you are trouble with the difficult of SCAIP Exam, you can consider choose SCAIP guide question to improve your knowledge to pass SCAIP exam, which is your testimony of competence.

## Free SCAIP Learning Cram - SCAIP Latest Dumps Free

Itexamguide Saviynt SCAIP exam training materials are provided in PDF format and software format. It contains Saviynt SCAIP exam questions and answers. These issues are perfect, Which can help you to be successful in the Saviynt SCAIP Exam. Itexamguide Saviynt SCAIP exam comprehensively covers all syllabus and complex issues. The Itexamguide Saviynt SCAIP exam questions and answers is the real exam challenges, and help you change your mindset.

## Saviynt Certified Advanced IGA Professional (Level 200) Sample Questions (Q27-Q32):

### NEW QUESTION # 27

Which statement correctly describes the two major ServiceNow integration modes supported by Saviynt?

- A. ServiceNow as a Managed Application is only for branding and labels; ServiceNow as a Ticketing System is only for analytics.
- B. Both modes are the same and serve identical purposes.
- C. ServiceNow as a Managed Application supports import, provisioning, and deprovisioning; ServiceNow as a Ticketing System supports ticket-based ITSM integration.
- D. ServiceNow as a Managed Application is used only for SAV roles; ServiceNow as a Ticketing System is used only for password sync.

**Answer: C**

Explanation:

The correct answer is A . Saviynt documentation describes two major ServiceNow integration models:

ServiceNow as a Managed Application and ServiceNow as a Ticketing System . The managed application model is used for application-style integration, including reconciliation or import and provisioning or deprovisioning activities. The ticketing system

model is used when ServiceNow functions as the ITSM workflow and ticket platform connected to Saviynt request processing. This distinction is repeatedly emphasized in the ServiceNow integration overview documentation.

Saviynt further notes that integration with ServiceNow is required to perform reconciliation, provisioning, and deprovisioning tasks, and separately documents ServiceNow as a ticketing system for request-related use cases. That means the two modes are complementary but not identical. Option D is therefore wrong because the modes serve different architectural purposes. Options B and C are incorrect because branding, analytics-only usage, SAV-role-only usage, and password-sync-only behavior do not describe the documented ServiceNow integration patterns. For Level 200 exam preparation, this is a high-value distinction: choose Managed Application when ServiceNow is the governed target system, and Ticketing System when ServiceNow is the ITSM workflow engine around Saviynt processes

### NEW QUESTION # 28

An EIC Administrator wants to retrieve a report of users and their assigned SAV Roles. What are the ways in which it can be achieved? (Multi-Select)

- A. Create an analytics with the SQL Query to get the data and export as CSV/Excel
- B. Create analytics with the SQL Query to get the data and select the checkbox "Send Email As Attachment" in analytics configuration
- C. Run a SQL Query to retrieve the data in Data Analyzer
- D. Using enhanced query

**Answer: A,B,C**

Explanation:

In Saviynt EIC, retrieving reports such as users and their assigned SAV roles can be achieved through multiple analytics and reporting mechanisms.

Option A is correct because administrators can create Analytics using SQL queries and configure them to send results via email as attachments, which is useful for scheduled reporting and automated distribution.

Option B is also valid since Analytics allows administrators to export query results into CSV or Excel formats, enabling offline analysis, auditing, and sharing with stakeholders.

Option C is correct because Data Analyzer provides a direct interface to execute SQL queries on the Saviynt database, allowing administrators to quickly retrieve required data without creating a formal analytics job.

Option D (Using enhanced query) is not a standard or recognized reporting method within Saviynt for this use case. While advanced queries can be written, "enhanced query" is not a defined feature or module for report extraction.

Thus, the correct answers are A, B, and C, which represent the primary supported methods for reporting in Saviynt.

### NEW QUESTION # 29

To authenticate Saviynt REST API calls, what must be generated before invoking protected APIs?

- A. Transport package
- B. OAuth access token
- C. SMTP token
- D. Dataset key

**Answer: B**

Explanation:

The correct answer is B. OAuth access token. Saviynt documentation states that to integrate Saviynt APIs with Saviynt Identity Cloud, an OAuth access token must be generated to authenticate API calls. This is a foundational concept for the API section of Level 200 because even when using Postman or another client, the request must be authenticated before protected endpoints can be called successfully. Saviynt also documents that its APIs are RESTful APIs used to configure and access various platform features, so token-based authentication is central to practical API usage.

The other options are unrelated to Saviynt REST API authentication. SMTP token is not a Saviynt API authentication model, Transport package is used for moving supported configurations between environments, and Dataset key is not the documented authentication requirement for API access. Saviynt's API reference guide further describes version-specific collections, supported methods, requests, and responses, which is exactly why Postman-based testing in certification labs usually starts with authentication setup first. In practical terms, if the OAuth token is missing or invalid, the request will fail even if the endpoint URL and payload are correct. That is why OAuth access token generation is the correct answer.

### NEW QUESTION # 30

Problem Statement:

Access request approval is not being assigned to the correct approver for a given endpoint.

In this scenario, what configurations will you check? (Multi-Select)

- A. Verify the workflow attached to the corresponding Security System to ensure it is correctly configured
- B. Verify if Delegate is configured for the intended approver
- C. Verify the workflow attached to the corresponding Endpoint to ensure it is correctly configured
- D. Verify the requestor selected the correct approver while submitting the request

**Answer: A,B,C**

Explanation:

In Saviynt EIC, approval assignment for access requests is primarily controlled through workflow configurations, which are associated either at the endpoint level or security system level. Therefore, the first step in troubleshooting incorrect approver assignment is to validate whether the correct workflow is attached and properly configured at both levels (Options A and C). Workflows define approval logic such as manager, owner, or custom approvers, and misconfiguration here often leads to incorrect routing.

Option B is also correct because delegation settings can override the intended approver. If a delegate is configured for an approver, the request may be routed to the delegate instead of the original approver, causing confusion if not validated.

Option D is incorrect because in Saviynt, approvers are typically system-driven based on workflow rules, not manually selected by the requester in most standard configurations. The requester does not usually control approver assignment unless explicitly customized, making this option irrelevant for standard troubleshooting.

### NEW QUESTION # 31

What configuration types are needed to set up an emergency access role request?

- A. All the above
- B. Select required feature access in SAV Role Configurations
- C. Select emergency access related parameters in the Role-level Configurations
- D. Select a workflow under Global Configurations

**Answer: A**

Explanation:

Setting up an Emergency Access Role (EAR) request in Saviynt EIC requires multiple coordinated configurations across different components of the system. Option A is correct because emergency access roles must be configured at the role level, where parameters such as emergency access flag, duration, justification requirement, and elevated privileges are defined.

Option C is also necessary because SAV Role Configurations control which users (such as administrators or requesters) have the ability to request or manage emergency access roles. Without proper SAV role permissions, users cannot initiate or approve EAR requests.

Option D is equally important because workflows defined under Global Configurations govern the approval process, escalation paths, and auditing requirements for emergency access. These workflows ensure that emergency access is properly controlled, reviewed, and revoked after use.

Since all these configurations collectively enable emergency access functionality in Saviynt, the correct answer is All the above. This aligns with Saviynt best practices for implementing secure, auditable, and compliant emergency access management.

### NEW QUESTION # 32

.....

The privacy protection of users is an eternal issue in the internet age. Many illegal websites will sell users' privacy to third parties, resulting in many buyers are reluctant to believe strange websites. But you don't need to worry about it at all when buying our SCAIP Learning Engine. We assure you that we will never sell users' information on the SCAIP exam questions because it is damaging our own reputation. And we will help you on the SCAIP study materials if you have any question.
