Many IT certification exam dumps providers spend a lot of money and spirit on advertising and promotion about Microsoft AZ-204 exam lab questions but pay little attention on improving products' quality and valid information resource. They prefer low price strategy with low price rather than excellent valid and high-quality AZ-204 Exam Lab Questions with a little more cost. I think high passing rate products is what you need in fact.

To earn the Microsoft AZ-204 certification, developers need to pass a 150-minute exam that consists of 40-60 multiple-choice questions. AZ-204 exam covers various topics related to Azure development, such as developing Azure compute solutions, developing Azure storage solutions, implementing Azure security, monitoring, troubleshooting and optimizing Azure solutions, and connecting to and consuming Azure services and third-party services. Developing Solutions for Microsoft Azure certification exam is intended for developers working in a variety of roles, including cloud solution architects, cloud developers, DevOps engineers, and software engineers. By earning the Microsoft AZ-204 Certification, developers can demonstrate their expertise in developing solutions for Microsoft Azure and can enhance their career opportunities.

The average salary of a AZ-204: Developing Solutions for Microsoft Azure Exam Certified Expert in

- India - 20,00,327 INR
- England - 90,532 POUND
- Europe - 90,547 EURO
- United State - 120,000 USD

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q29-Q34):

NEW QUESTION # 29

You need to ensure that validation testing is triggered per the requirements.

How should you complete the code segment? To answer, select the appropriate values in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/devops/notifications/oob-supported-event-types>

NEW QUESTION # 30

You are developing a microservices solution. You plan to deploy the solution to a multinode Azure Kubernetes Service (AKS) cluster.

You need to deploy a solution that includes the following features:

reverse proxy capabilities

configurable traffic routing

TLS termination with a custom certificate

Which components should you use? To answer, drag the appropriate components to the correct requirements. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 31

You manage several existing Logic Apps.

You need to change definitions, add new logic, and optimize these apps on a regular basis.

What should you use? To answer, drag the appropriate tools to the correct functionalities. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Enterprise Integration Pack

After you create an integration account that has partners and agreements, you are ready to create a business to business (B2B) workflow for your logic app with the Enterprise Integration Pack.

Box 2: Code View Editor

To work with logic app definitions in JSON, open the Code View editor when working in the Azure portal or in Visual Studio, or copy the definition into any editor that you want.

Box 3: Logical Apps Designer

You can build your logic apps visually with the Logic Apps Designer, which is available in the Azure portal through your browser and in Visual Studio.

<https://docs.microsoft.com/en-us/azure/logic-apps/logic-apps-overview>

NEW QUESTION # 32

You are developing an application to store millions of images in Azure blob storage.

The application has the following requirements:

- * Store the Exif (exchangeable image file format) data from the image as blob metadata when the application uploads the image.
- * Retrieve the Exif data from the image while minimizing bandwidth and processing time.
- * Utilizes the REST API.

You need to use the image Exif data as blob metadata in the application.

Which HTTP verbs should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 33

You are working for a company that designs mobile applications. They maintain a server where player records are assigned to their different games. The tracking system is new and in development.

The application uses Entity Framework to connect to an Azure Database. The database holds a Player table and Game table.

When adding a player, the code should insert a new player record, and add a relationship between an existing game record and the new player record.

The application will call `CreatePlayerWithGame` with the correct `gameId` and the `playerId` to start the process.

(Line numbers are included for reference only.)

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Many-to-many relationships without an entity class to represent the join table are not yet supported. However, you can represent a many-to-many relationship by including an entity class for the join table and mapping two separate one-to-many relationships.

protected override void OnModelCreating(ModelBuilder modelBuilder)

```
{
modelBuilder.Entity<PostTag>()
HasKey(t => new { t.PostId, t.TagId });
modelBuilder.Entity<PostTag>()
HasOne(pt => pt.Post)
WithMany(p => p.PostTags)
HasForeignKey(pt => pt.PostId);
modelBuilder.Entity<PostTag>()
HasOne(pt => pt.Tag)
WithMany(t => t.PostTags)
HasForeignKey(pt => pt.TagId);
}
}
```
