With the increasing importance of cybersecurity in today's digital landscape, this certification can help candidates stand out from the competition and demonstrate their expertise in protecting critical systems and data.

Trend Micro Certified Professional for Deep Security Sample Questions (Q57-Q62):

NEW QUESTION # 57

Which of the following Protection Modules does not benefit from Recommendation Scans?

- A. Integrity Monitoring
- B. Intrusion Prevention
- **C. Log Inspection**
- D. Firewall

Answer: C

Explanation:

Recommendation Scans analyze system roles and applications to suggest appropriate Firewall, Intrusion Prevention, and Integrity Monitoring rules, but do not provide recommendations for Log Inspection. Log Inspection rules must be assigned manually.

NEW QUESTION # 58

Which Protection Modules can make use of a locally installed Smart Protection Server?

- A. Anti-Malware is the only Protection Modules that can use the locally installed Smart Protection Server.
- B. The Anti-Malware, Web Reputation and Intrusion Prevention Protection Modules can make use of the locally installed Smart Protection Server.
- C. All Protection Modules can make use of the locally installed Smart Protection Server
- **D. The Anti-Malware and Web Reputation Protection Modules can make use of the locally installed Smart Protection Server.**

Answer: D

Explanation:

Only the Anti-Malware and Web Reputation modules are designed to interact with a Smart Protection Server for real-time threat lookups. The other modules do not leverage the Smart Protection Server.

From the official documentation:

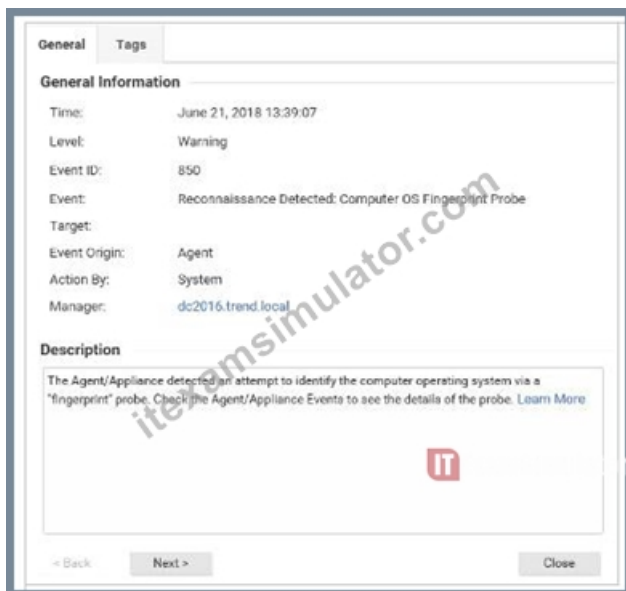

"Smart Protection Server provides global threat intelligence lookups to the Anti-Malware and Web Reputation modules. Other modules do not use Smart Protection Server." References:

Trend Micro Deep Security Administrator's Guide: Smart Protection Server Integration

NEW QUESTION # 59

Based on the details of event displayed in the exhibit, which of the following statements is false?

- A. The scan may be generated from an IP address which may be known to you. If so, the source IP address can be added to the reconnaissance whitelist.
- B. The Intrusion Prevention Protection Modules must be enabled to detect reconnaissance scans.
- C. You can instruct the Deep Security Agents and Appliances to block traffic from the source IP address for a period of time.
- D. You can create a firewall rule to permanently block traffic from the originating IP address.

Answer: A

NEW QUESTION # 60

As the administrator in a multi-tenant environment, you would like to monitor the usage of security services by tenants? Which of the following are valid methods for monitoring the usage of the system by the tenants?

- A. Generate a Chargeback report in Deep Security manager Web console.
- B. All the choices listed here are valid.
- C. Monitor usage by the tenants from the Statistics tab in the tenant Properties window.
- D. Use the Representational State Transfer (REST) API to collect usage data from the tenants.

Answer: B

Explanation:

Deep Security Manager records data about tenant usage. This information is displayed in the Tenant Protection Activity widget on the Dashboard, the Statistics tab in tenant Properties, and the Chargeback report.

This information can also be accessed through the Status Monitoring REST API which can be enabled or disabled from the Administration > Advanced > System Settings > Advanced > Status Monitoring API.

multi-tenancy

Explanation: Study Guide - page (422)

NEW QUESTION # 61

How is caching used by the Web Reputation Protection Module?

- A. Caching is used by the Web Reputation Protection Module to temporarily store the pages that make up the Web site. The Web site is cached in case the site is visited again for the life of the cache.
- B. Caching is used by the Web Reputation Protection Module to temporarily store the credibility score for a Web site. The retrieved credibility score is cached in case the score for the Web site is required again for the life of the cache.
- C. Caching is used by the Web Reputation Protection Module to keep track of Web sites that are added to the Allowed list. Any sites added to the Allowed list will be accessible by protected servers regardless of their credibility score.
- D. Caching is used by the Web Reputation Protection Module to keep track of Allowed and Blocked Web sites. Any sites that are Allowed or Blocked do not require the retrieval of a credibility score from the Trend Micro Web Reputation Service.

Answer: B
