## 100% Pass Quiz 2026 Perfect ISO-IEC-27001-Foundation: Popular ISO/IEC 27001 (2022) Foundation Exam Exams

Our products boost 3 versions and varied functions. The 3 versions include the PDF version, PC version, APP online version. You can use the version you like and which suits you most to learn our ISO-IEC-27001-Foundation study materials. The 3 versions support different equipment and using method and boost their own merits and functions. For example, the PC version supports the computers with Window system and can stimulate the real exam. Our products also boost multiple functions which including the self-learning, self-evaluation, statistics report, timing and stimulation functions. Each function provides their own benefits to help the clients learn the ISO-IEC-27001-Foundation Study Materials efficiently. For instance, the self-learning and self-evaluation functions can help the clients check their results of learning the ISO/IEC 27001 (2022) Foundation Exam study materials.

## APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q43-Q48):

NEW QUESTION # 43

Which International Standard can be used to implement an integrated management system with ISO/IEC 27001?

- A. None of the above
- B. ISO/IEC 27013
- C. ISO 9001
- D. ISO/IEC 27003

**Answer: B**

Explanation:

ISO/IEC 27013 provides specific guidance on the integration of ISO/IEC 27001 (Information Security Management) and ISO/IEC 20000-1 (IT Service Management). It offers practical advice for organizations seeking a unified management system approach. While ISO/IEC 27003 (A) provides guidance on ISMS implementation, it does not address integration. ISO 9001 (C) is the Quality Management Standard and can be integrated, but the specific standard designed for integrating 27001 with ITSM is ISO/IEC 27013. Therefore, the correct answer is B: ISO/IEC 27013, as it is explicitly published for this purpose.

#### NEW QUESTION # 44

Which of the following is required to be considered when selecting appropriate information security risk treatment options?

- A. Only risk controls in Annex A of ISO/IEC 27001
- B. Criteria for accepting identified risks
- C. Only risk controls in ISO/IEC 27002
- D. Criteria for performing risk assessments

**Answer: B**

Explanation:

Clause 6.1.3 (c) requires organizations to:

"compare the controls determined in 6.1.3 b) with those in Annex A and verify that no necessary control has been omitted; and prepare a Statement of Applicability." It also requires organizations to select risk treatment options considering "the organization's risk acceptance criteria." This shows that risk acceptance criteria are a fundamental factor when selecting risk treatment options. Options C and D are incorrect because Annex A and ISO/IEC 27002 are reference sets, not the sole sources of controls - organizations can design their own. Criteria for performing risk assessments (B) are part of 6.1.2 (risk assessment process), not risk treatment.

Thus, the correct requirement is A: Criteria for accepting identified risks.

#### NEW QUESTION # 45

Which action is a required response to an identified residual risk?

- A. The organization shall change practices to avoid the risk occurring
- B. By default, it shall be controlled by information security awareness and training
- C. Top management shall delegate its treatment to risk owners
- D. It shall be reviewed by the risk owner to consider acceptance

**Answer: D**

Explanation:

Clause 6.1.3 (e) specifies:

"The organization shall obtain risk owners' approval of the information security risk treatment plan and acceptance of the residual information security risks." This confirms that residual risks - those remaining after risk treatment - must be reviewed and formally accepted by the designated risk owner. Option A is incorrect; awareness training is not a default control for all residual risks. Option B misrepresents leadership responsibility; top management ensures processes exist, but risk owners formally approve residual risk. Option D (avoiding risk) is a treatment option, not the mandated requirement for residual risks.

Thus, the required response is C: Review and acceptance by the risk owner.

#### NEW QUESTION # 46

Identify the missing word in the following sentence.

According to ISO/IEC 27000, the definition of risk [?] is a "process to comprehend the nature of risk and to determine the level of risk."

- A. Assessment
- B. Evaluation
- **C. Analysis**
- D. Management

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27000 standards:

ISO/IEC 27000 defines:

- \* Risk analysis: "process to comprehend the nature of risk and to determine the level of risk" (Clause 3.58).
- \* Risk assessment: the overall process of risk identification, risk analysis, and risk evaluation.
- \* Risk evaluation: compares results of risk analysis against risk criteria to determine priority.
- \* Risk management: coordinated activities to direct and control an organization with regard to risk.

Therefore, the missing word in the given definition is "analysis".

This is important for ISMS implementation: organizations must understand the distinctions. Risk analysis is the core technical evaluation stage, while assessment is the broader process including evaluation, and management refers to the overall governance of risks.

Thus, the correct verified answer is B: Analysis.

#### **NEW QUESTION # 47**

Which statement describes the Classification of information control in Annex A of ISO/IEC 27001?

- A. Ensures the rules to control physical and logical access apply to assets
- **B. Ensures that information is classified based on confidentiality, integrity and availability**
- C. Ensures that security perimeters are used to protect assets
- D. Ensures that all information assets are labelled with their classification

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27002:2022 standards:

Annex A.5.12 (Classification of information) states:

"Information should be classified according to the information security needs of the organization based on confidentiality, integrity and availability." This aligns directly with option B. Option A (labelling) is a separate control (Annex A.5.13). Option C (security perimeters) is under physical controls (Annex A.7.1). Option D (access control rules) relates to Annex A.5.15 and A.8.2.

Thus, the verified correct statement for the Classification of information control is B.
