NEW QUESTION # 83

A client would like to use `at.js 2.x` to integrate third-party weather data from a service that provides the temperature of the site visitor's location based on IP. This will allow the client to promote products to visitors based on their local weather.

The third-party weather request needs to resolve with the temperature before the global Target request (mbox) happens. A Data Provider will be used to gather this data in lieu of `targetPageParams()`. Why should Data Providers be used instead of `targetPageParams()`?

- A. Data Providers offer a built in XHR function to make a third party request to the weather service.
- B. The `window.targetPageParams()` function disables body hiding when used.
- C. The `targetPageParams()` function is not supported in `at.js 2.x`.
- **D. Content hiding is enabled until the Data Provider resolves using the callback function passed to the Data Provider.**
