### NEW QUESTION # 11

Number plan determines how many and which digits are necessary for call routing.

- A. True
- B. False

**Answer: A**

Explanation:

Explanation

Number plan determines how many and which digits are necessary for call routing is a true statement. A number plan is a telecommunication scheme that assigns telephone numbers to subscribers and telephony endpoints in Genesys Cloud CX. A number plan can also define various aspects of call routing, such as:

- \* How many digits are required to dial a destination number
  - \* Which digits are used to identify a country code, area code, or extension
  - \* Which digits are used to access an outside line or an operator
  - \* Which digits are used to indicate an emergency number or a special service
- A number plan can be added or modified based on the organizational requirements in Genesys Cloud CX. A number plan can also be tested with the call simulator tool in Genesys Cloud CX. References:

Which of the following routes interactions based on an algorithm that determines the best available agent for the interaction?

- **A. Automatic Call Distribution**
- B. Architect
- C. Emergency Groups
- D. Scheduling

**Answer: A**

Explanation:

Automatic Call Distribution (ACD) is the feature that routes interactions based on an algorithm that determines the best available agent for the interaction. ACD is a system that distributes incoming calls (or other types of interactions) to agents or queues based on various criteria, such as agent skills, availability, priority, etc. ACD uses an algorithm that evaluates these criteria and assigns each interaction to the most appropriate agent or queue.
