SAP Certified Associate - Security Administrator Sample Questions (Q56-Q61):

NEW QUESTION # 56

Which levels of security protection are provided by Secure Network Communication (SNC)? Note: There are 3 correct answers to this question.

- A. Authorization
- B. Availability
- C. Authentication
- D. Integrity
- E. Privacy

Answer: C,D,E

Explanation:

* Context: Secure Network Communication (SNC) enhances security for communication between SAP systems by providing various protections.

* Solution Descriptions:

* Authentication: Confirms the identities of communicating parties.

* Integrity: Ensures data has not been altered during transmission.

* Privacy: Encrypts data to prevent unauthorized access.

SAP Security References:

* SAP SNC Configuration Guide

* SAP Help Portal for SNC Features

NEW QUESTION # 57

In S/4HANA on-premise, which of the following combinations is required to grant a business user access to data from a Core Data Services (CDS) view using the standard ABAP authorization concept and authorization object S_RS_AUTH?

- A. *A CDS role with access conditions based on authorization object S_RS_AUTH
 - *APFCG role containing the CDS role and access conditions based up authorization object S_RS_AUTH
 - *Assignment of the PFBC role to the business user. C.
 - B. *A CDS role with access conditions based on authorization object S_RS_AUTH,
 - *APFCG role with authorization for object S_RS_AUTH and assignment of the PFBC role

- *The CDS role to the business user.
- C. *ACDS role with access conditions based on authorization object S_RS_AUTH
 - *A PFCG role with authorization for object S_RS_AUTH
 - *Assignment of the PFCG role to the business user. D.
- D. *A CDS role with access conditions based on authorization object S_RS_AUTH
 - *APFCG role containing the CDS role and access conditions based up authorization object S_RS_AUTH
 - *Assignment of the PFCG role and the CDS role to the business user.

Answer: D

NEW QUESTION # 58

When performing a comparison from the imparting role, what happens to the organizational level field values in the derived role?

Note: There are 2 correct answers to this question.

- A. Data for organizational levels that have already been maintained in the derived role is overwritten.
- B. Data for organizational levels that have already been maintained in the derived role is NOT overwritten.
- C. Data for organizational levels is transferred only when authorization data for the derived role is first modified.
- D. Data for organizational levels is always transferred when authorization data for the derived role is modified.

Answer: B,C

NEW QUESTION # 59

Which entities share data with Business Partners in the S/4HANA Business User Concept? Note: There are 2 correct answers to this question.

- A. User
- B. Employee
- C. Administrator
- D. Employer

Answer: A,B

Explanation:

In the S/4HANA Business User Concept, Business Partners share data with the following entities:

* User (C):

* Business users in S/4HANA are often linked to Business Partners to ensure seamless integration of data across HR and transactional modules.

* Employee (D):

* Employees are managed as Business Partners in S/4HANA, enabling integration with HR, organizational structures, and other master data.

Why Others Are Incorrect:

* Employer (A): Represents an organizational entity, not directly linked to Business Partners.

* Administrator (B): Refers to system roles, not master data entities like Business Partners.

SAP Security References:

* SAP Help Portal: Business Partner Integration in S/4HANA

* SAP Note: Business Partner Concept and User Synchronization

NEW QUESTION # 60

Which functions in SAP Access Control can be used to approve or reject a user's continued access to specific security roles? Note: There are 2 correct answers to this question.

- A. Role Certification
- B. Role Reaffirm
- C. SOD Review
- D. User Access Review

Answer: B,D

Explanation:

In SAP Access Control, User Access Review and Role Reaffirm are functions used to approve or reject a user's continued access to specific security roles. User Access Review allows managers or administrators to periodically review and certify user role assignments, ensuring that access remains appropriate for current job functions. This process involves approving or rejecting access based on business needs, supporting compliance with security policies. Role Reaffirm, similarly, requires periodic certification of role assignments, enabling administrators to confirm or revoke user access to specific roles to prevent unauthorized permissions. SOD (Segregation of Duties) Review focuses on identifying conflicts in role assignments, not approving user access, and Role Certification is not a standard term in SAP Access Control, though it may be confused with Role Reaffirm. These functions ensure ongoing governance of access rights, reducing risks and maintaining compliance in SAP systems by ensuring only authorized users retain access to critical roles.
