Our Microsoft AZ-305 practice materials are suitable for exam candidates of different degrees, which are compatible whichever level of knowledge you are in this area. These Microsoft AZ-305 Training Materials win honor for our company, and we treat Microsoft AZ-305 test engine as our utmost privilege to help you achieve your goal.

Microsoft AZ-305 certification exam is a valuable tool for professionals who want to validate their skills in designing Azure-based infrastructure solutions. AZ-305 exam covers different areas of Azure infrastructure design, and it is designed to test the candidate's ability to design solutions that meet specific business requirements, technical constraints, and compliance needs. Designing Microsoft Azure Infrastructure Solutions certification is a part of the Solutions Architect Expert certification path and can help professionals advance their career in cloud computing.

Microsoft AZ-305: Designing Microsoft Azure Infrastructure Solutions is a certification exam designed for professionals who want to demonstrate their skills in designing solutions on the Azure infrastructure. AZ-305 Exam is intended for individuals with a strong technical background in Azure and a good understanding of the principles of cloud computing. AZ-305 exam is also suitable for individuals who have experience with designing and implementing Azure solutions.

Pdf AZ-305 Free - Microsoft Download AZ-305 Free Dumps: Designing Microsoft Azure Infrastructure Solutions Pass for Sure

Everyone has their own characteristics when they start to study our AZ-305 exam questions. In order for each user to find a learning method that suits them, we will provide you with a targeted learning version and study plan. There are three versions of the AZ-305 Practice Engine for you to choose: the PDF, Software and APP online. And further more, we have free demos of the AZ-305 learning guide on the website for you to download before you make the purchase.

Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q102-Q107):

NEW QUESTION # 102

Your organization has developed and deployed several Azure App Service Web and API applications. The applications use Azure Key Vault to store several authentication, storage account, and data encryption keys.

Several departments have the following requests to support the applications:

Department	Request
Security	<ul style="list-style-type: none"> Review membership of administrative roles and require to provide a justification for continued membership Get alerts about changes in administrator assignments. See a history of administrator activation, including which changes administrators made to Azure resources.
Development	<ul style="list-style-type: none"> Enable the applications to access Azure Key Vault and retrieve keys for use in code.
Quality Assurance	<ul style="list-style-type: none"> Receive temporary administrator access to create and configure additional Web and API applications in the test environment.

You need to recommend the appropriate Azure service for each department request.

What should you recommend? To answer, configure the appropriate options in the dialog box in the answer area.

NOTE: Each correct selection is worth one point.

NEW QUESTION # 103

You have an on-premises file server that stores 2 TB of data files.

You plan to move the data files to Azure Blob Storage in the West Europe Azure region. You need to recommend a storage account type to store the data files and a replication solution for the storage account. The solution must meet the following requirements:

- * Be available if a single Azure datacenter fails.
- * Support storage tiers.
- * Minimize cost.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Storage Account type:

Premium block blobs
Standard general-purpose v1
Standard general-purpose v2

Redundancy:

Geo-redundant storage (GRS)
Zone-redundant storage (ZRS)
Locally-redundant storage (LRS)
Read-access geo-redundant storage (RA-GRS)

Answer:

Explanation:

Answer Area

Storage Account type:

- Premium block blobs
- Standard general-purpose v1
- Standard general-purpose v2

Redundancy:

- Geo-redundant storage (GRS)
- Zone-redundant storage (ZRS)
- Locally-redundant storage (LRS)
- Read-access geo-redundant storage (RA-GRS)

NEW QUESTION # 104

You plan to deploy the backup policy shown in the following exhibit.

Policy1

Associated items Delete Save Discard

Backup frequency

Daily 6:00 PM (UTC) Coordinated Universal Time

Retention range

Retention of daily backup point.

* At 6:00 PM For 90 Day(s)

Retention of weekly backup point.

* On Sunday * At 6:00 PM For 26 Week(s)

Retention of monthly backup point.

Week Based Day Based

* On First * Day Sunday * At 6:00 PM For 36 Month(s)

Retention of yearly backup point.

Not Configured

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Virtual machines that are backed up using the policy can be recovered for up to a maximum of [answer choice].

- 90 days
- 26 weeks
- 36 months
- 45 months

The minimum recovery point objective (RPO) for virtual machines that are backed up by using the policy is [answer choice].

- 1 hour
- 1 day
- 1 week
- 1 month
- 1 year

Answer:

Explanation:

Virtual machines that are backed up using the policy can be recovered for up to a maximum of [answer choice].

- 90 days
- 26 weeks
- 36 months
- 45 months

The minimum recovery point objective (RPO) for virtual machines that are backed up by using the policy is [answer choice].

- 1 hour
- 1 day
- 1 week
- 1 month
- 1 year

Explanation

Graphical user interface, text, application Description automatically generated

Virtual machines that are backed up using the policy can be recovered for up to a maximum of [answer choice].

- 90 days
- 26 weeks
- 36 months
- 45 months

The minimum recovery point objective (RPO) for virtual machines that are backed up by using the policy is [answer choice].

- 1 hour
- 1 day

- 1 month
- 1 year

NEW QUESTION # 105

You plan to migrate DB1 and DB2 to Azure.

You need to ensure that the Azure database and the service tier meet the resiliency and business requirements.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Database: A single Azure SQL database
 Azure SQL Managed Instance
 An Azure SQL Database elastic pool

Service tier: Hyperscale
 Business Critical
 General Purpose

Answer:

Explanation:

Answer Area

Database: A single Azure SQL database
 Azure SQL Managed Instance
 An Azure SQL Database elastic pool

Service tier: Hyperscale
 Business Critical
 General Purpose

Explanation

Answer Area

Database:

Service tier:

NEW QUESTION # 106

You plan to develop, deploy, and maintain 100 React-based web apps that will NOT require server-side rendering.

You need to recommend a hosting solution for the apps. The solution must meet the following requirements:

- Automatically deploy new versions of the apps when changes to the apps' source code are committed in Azure Repos.
- Automatically stage a preview version of an app when a pull request is processed.
- Support Azure API Management by using the /api
- Minimize costs.

What should you include in the recommendation?

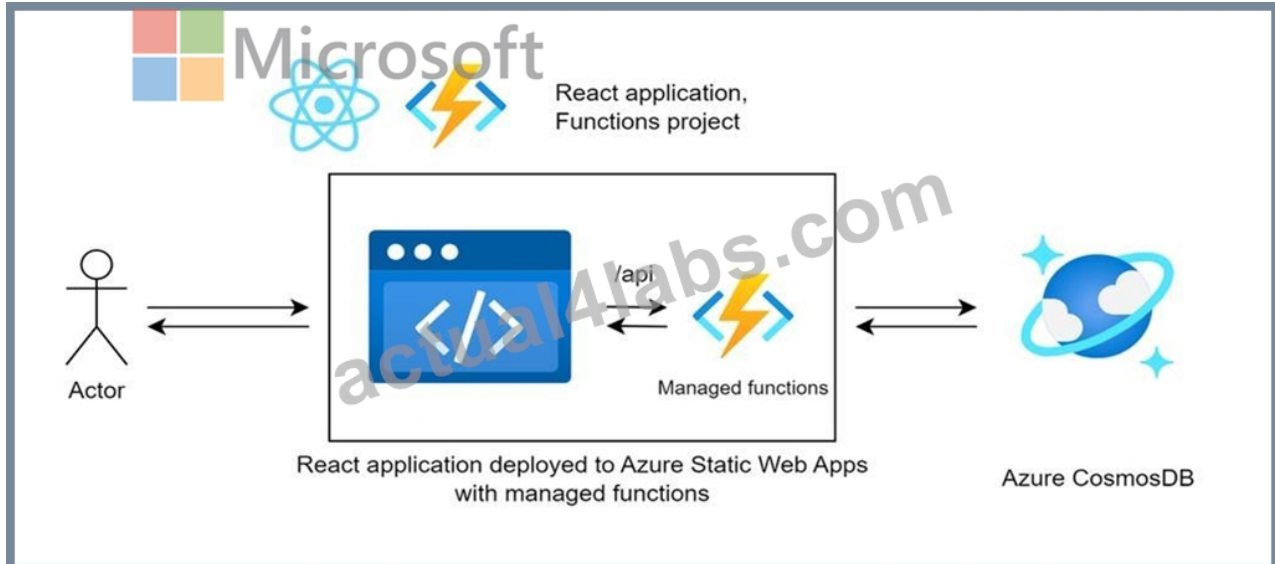

- A. Azure App Service web apps
- **B. Azure Static Web Apps**
- C. Azure Blob Storage static sites

- D. an Azure function

Answer: B

Explanation:

Build a full-stack React application with Azure Static Web Apps and managed functions. React is the most popular framework for frontend web applications, and Azure Static Web Apps is the best place to host these applications on Azure. With Azure Static Web Apps' built-in managed Azure Functions, you can build and host a full-stack web application using only Azure Static Web Apps for simpler deployment and management across environments.

Note: Azure Static Web Apps publishes a website to a production environment by building apps from an Azure DevOps or GitHub repository.
