Saviynt SCAIP Latest Braindumps Book & SCAIP Authorized Certification

The client can try out and download our SCAIP training materials freely before their purchase so as to have an understanding of our product and then decide whether to buy them or not. The website pages of our product provide the details of our SCAIP learning questions. You can see the demos which are part of the all titles selected from the test bank and the forms of the questions and answers and know the form of our software on the website pages of our SCAIP study materials.

Saviynt Certified Advanced IGA Professional (Level 200) Sample Questions (Q53-Q58):

NEW QUESTION # 53

What are the different features available under Role Intelligence? (Multi-Select)

- A. Entitlement Discovery

- B. Role-Access Mismatches
- C. Role Mining
- D. Role Governance

Answer: A,C,D

NEW QUESTION # 54

In the Saviynt App for ServiceNow, what options are available to refresh the RITM status in the ServiceNow app based on the respective Saviynt's status? (Multi-Select)

- A. Regenerate application catalog item
- B. Click Refresh button on the RITM page in ServiceNow
- C. Make a Postman API call
- D. It will be automatically updated in 1 minute via Request item history job in ServiceNow

Answer: B,D

Explanation:

In Saviynt-ServiceNow integration, the synchronization of RITM (Request Item) status between Saviynt and ServiceNow is handled through both manual and automated mechanisms.

Option B is correct because users or administrators can manually click the Refresh button on the RITM page in ServiceNow to immediately fetch the latest status from Saviynt. This is useful for real-time validation when monitoring request progress.

Option C is also correct as ServiceNow includes a Request Item History Job, which runs periodically (commonly every minute) to automatically sync and update the RITM status based on the latest state in Saviynt. This ensures near real-time consistency between both systems without manual intervention.

Option A is incorrect because Postman API calls are not a standard or supported operational method for end users to refresh RITM status. Option D is unrelated, as regenerating catalog items does not impact ticket status synchronization.

Thus, the correct answers are manual refresh and automated job-based synchronization.

NEW QUESTION # 55

An EIC Administrator has a requirement to execute User Import at 9 AM everyday. What are the different options available in EIC to schedule this job?

- A. Global configuration
- B. CRON expression in Job trigger
- C. Schedule option (Hourly, Weekly, Daily, Minutes) in Job trigger
- D. External config.properties file

Answer: B,C

Explanation:

In Saviynt EIC, job scheduling is managed through the Job Control Panel, which provides flexible options to define when and how jobs such as User Import are executed. The correct options for scheduling are CRON expression and built-in schedule options, making A and B correct.

Option A (CRON expression in Job trigger) allows administrators to define precise scheduling using CRON syntax. For example, scheduling a job at exactly 9 AM every day can be achieved using a CRON expression, offering high flexibility and control.

Option B (Schedule option - Hourly, Weekly, Daily, Minutes) provides a user-friendly way to configure job schedules without writing CRON expressions. Administrators can simply select "Daily" and specify 9 AM, making it easier for standard scheduling needs.

Option C (Global configuration) is not used for scheduling jobs. Option D (External config.properties file) is used for system-level configurations, not job scheduling.

Thus, Saviynt supports both CRON-based and UI-based scheduling mechanisms for job execution.

NEW QUESTION # 56

Which among these is NOT a valid parameter under ImportAccountEntJSON in REST connector?

- A. accountParams
- B. accountOwnerParams

- C. entitlementParams
- D. entOwnerParams

Answer: D

Explanation:

In Saviynt EIC REST connector configuration, ImportAccountEntJSON is used to define how account and entitlement data are imported (reconciled) from a target system. This JSON structure includes several predefined and supported parameters that control how accounts, entitlements, and their ownership relationships are processed.

accountParams (Option C) is a valid parameter and is used to map account-level attributes such as account name, status, and identifiers. entitlementParams (Option B) is also valid and defines how entitlement data (groups, roles, permissions) are fetched and mapped. accountOwnerParams (Option A) is another valid parameter used to define account ownership mapping, helping assign owners to accounts during reconciliation.

However, entOwnerParams (Option D) is NOT a valid parameter in the ImportAccountEntJSON structure. The correct naming convention for entitlement ownership (if applicable) does not use "entOwnerParams" in Saviynt REST connector configuration. Saviynt follows strict parameter naming standards, and incorrect parameter names will not be recognized or processed by the connector.

Thus, Option D is the correct answer, as it represents an invalid configuration parameter in the context of ImportAccountEntJSON.

NEW QUESTION # 57

Which capabilities are supported for Active Directory groups through Saviynt group management? (Multi- Select)

- A. Update groups
- B. Create groups
- C. Only launch certification campaigns
- D. Delete groups

Answer: A,B,D

Explanation:

The correct answers are A, B, and C. Saviynt documentation for Active Directory group management states that the connector can be used to create, update, and delete AD or ADSI groups. It also supports related group-management functions such as updating group attributes and maintaining group membership and owners. This confirms that Saviynt group management is not limited to visibility or request tracking; it supports the full operational lifecycle for AD groups when configured correctly.

Saviynt's administrative documentation further explains that group management must be configured to enable users to create and manage groups in Saviynt Identity Cloud. That broader wording aligns with the specific lifecycle operations of create, update, and delete. Option D is incorrect because campaign launching is part of certification governance, not the core capability set of AD group management itself. A campaign may later review group-related access, but group management is fundamentally about administering the group object and its membership lifecycle. For Level 200 preparation, this distinction matters: group management handles the lifecycle of the group object, while campaigns handle review and attestation of access associated with identities, roles, or entitlements.

NEW QUESTION # 58

.....

You can easily install Saviynt SCAIP exam questions file on your desktop computer, laptop, tabs, and smartphone devices and start Saviynt Certified Advanced IGA Professional (Level 200) (SCAIP) exam dumps preparation without wasting further time. Whereas the other two Saviynt SCAIP Practice Test software is concerned, both are the mock Saviynt Certified Advanced IGA Professional (Level 200) (SCAIP) exam that will give you a real-time SCAIP practice exam environment for preparation.
